Philipp Hilbert.*Founding Product Manager.*

Positioning , AI-native Founding PM for messy B2B workflows, German customer workshops, and dev-ready execution.

Berlin, Germany philipp@projuncta.com true-north-cy.lovable.app

§ WHY OPUS

opus is interesting because it combines real industrial workflows, AI agents, fast shipping, and direct customer pressure. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not spent my career in procurement specifically. My strength is mapping complex regulated workflows, extracting edge cases, and turning operational mess into scalable software logic , the underlying mechanic procurement runs on.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

Lovable
polished front-end prototypes

Framer
design-heavy work

Claude Code
in-repo refactors

II-Agent
mixed agent work

Gamma.app
presentations

GitHub Copilot
feature delivery

GPT-4o / GPT-5
spec, edge cases, review

Cursor / VSCode
shipping environment

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, JavaScript, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, Helm, Terraform, Prometheus, Grafana, Jenkins, GitOps, Docker, RedHat OpenShift, REST APIs, ETL systems, AI-assisted development workflows, GitHub Copilot, LLM-based prototyping.

§ SIDE PROJECT

Built nights and weekends.

Liberation of Bajor

GITHUB.COM/HILBERTP/LIBERATION-OF-BAJOR →

A local file queue where AI agents coordinate autonomously , one writes briefs, a watcher picks them up, another executes them, a third reviews the result.

- Multi-agent orchestration loop running end-to-end without human intervention , Kira (coordinator) writes briefs, O'Brien (implementor) executes via Claude Code CLI, an evaluator accepts or amends.
- Files on disk as source of truth , no database, no message broker. Watcher process detects new briefs and dispatches them, structured DONE reports written back to the queue.
- 669+ commits across 298 thin slices, ADR-driven refactors, regression suite with mutex-gated merges, MAX_ROUNDS guards, dashboard with real-time lane states.
- Personal lab for the exact pattern opus needs: AI-native execution, tight feedback loops, dev-ready slices, low-ego shipping.

§ HOW I WOULD WORK AT OPUS

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Join customer calls, map workflows, understand the current backlog, identify ambiguity and missing edge cases.

WEEK 2

Prototype, clarify, slice.

Prototype first flows, clarify edge cases, convert customer feedback into dev-ready slices.

WEEK 3+

Ship, unblock, close loops.

Turn validated workflows into shippable product increments, keep engineers unblocked, close feedback loops with customers.

I COVER LETTER

Dear opus team,

Your role description reads less like a traditional Product Manager position and more like a call for someone who can create clarity, translate operational reality into working software, and keep execution moving without hiding behind process. That is exactly how I naturally operate.

Over the last years I have worked across AI systems, analytics platforms, healthcare, InsurTech, public-sector data systems, startups, and founder-level environments where ambiguity was normal and speed mattered. My role was consistently the same: understand messy operational workflows, structure

them into actionable requirements, align stakeholders and engineers, and ensure delivery actually happens.

What particularly attracted me to opus is your AI-first builder mindset. I fully agree that modern product work should move beyond static wireframes and endless documentation loops. I regularly use AI-native workflows to accelerate execution , from autonomous feature delivery with GitHub Copilot to rapid prototyping, structured requirements generation, and direct technical problem-solving in production environments. I use Lovable for polished front-end prototypes, Framer for design-heavy work, II-Agent and Claude Code for mixed work, and Gamma.app for presentations.

At *Rohde & Schwarz*, I independently delivered production-ready features with GitHub Copilot and GPT-4o into highly secure AI infrastructure environments , requirements definition, user stories, implementation in a microservice architecture, testing, rollout on RedHat OpenShift via Docker, Kubernetes, Helm, ArgoCD, and Jenkins CI/CD pipelines, and operational troubleshooting. Toward the end of the project, I independently delivered features that had remained blocked for a long time. At *Emil Group*, I stabilized a chaotic delivery environment, rebuilt client trust, and transformed unclear workflows into structured execution across engineering teams. Across multiple roles I acted as the operational bridge between business stakeholders and technical teams while maintaining momentum under pressure.

My earlier founder and founding-team experience is also directly relevant to opus. At *Kvitt*, I worked on consumer payment flows and the business logic behind financial transactions. At *Qcrypt*, I was involved in building around quantum-resistant encryption technology. At *CLINET Platforms*, I worked in a founding product role on a healthcare app where real-world operational workflows had to become shippable software. For *in_vis*, I also worked on founder-level structuring topics and hold VSOP options.

I strongly identify with the practical and low-ego nature of the role. I have no problem jumping into details, clarifying edge cases, fixing inconsistencies,

restructuring a backlog, or working directly with teams to unblock delivery. My focus is always on shipping meaningful outcomes instead of protecting titles or territory.

What makes me especially excited about opus is the combination of AI-native execution culture, real operational customer problems, direct feedback loops with users, high ownership, fast iteration, and building systems that strengthen European industry instead of adding more abstraction layers.

I believe my combination of product leadership, technical fluency, AI-native workflows, founder-level pragmatism, and stakeholder management would allow me to contribute quickly and effectively in a founding Product Manager environment.

Best regards,
Philipp Hilbert

II CURRICULUM VITAE

BEARING

Founding Product Manager. AI-native product operator. Workflow and systems builder.

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into scalable software systems. Background spans AI systems, analytics platforms, regulated environments, founder-level company building, and cross-functional execution. Comfortable operating in ambiguity and high-pressure delivery , where requirements are incomplete, priorities shift, and teams need clarity to move. Fluent in AI-native workflows including GitHub Copilot, LLM-assisted development, rapid prototyping, and autonomous feature delivery.

---

01 , CORE STRENGTHS

- Translating messy operational workflows into dev-ready requirements
- AI-native product execution and rapid prototyping
- Cross-functional stakeholder alignment
- Strong delivery ownership and backlog management
- Product discovery under ambiguity
- Workshop moderation , technical and non-technical
- KPI-oriented product thinking and prioritization
- Technical fluency across modern software systems
- Founder-level pragmatism , low ego, high agency

---

02 , PROFESSIONAL EXPERIENCE

Rohde & Schwarz

2024 , 2025

Product Owner , AI Data Transformation

- Built and operated a central AI and data management platform for multimodal datasets.
- Delivered autonomous production-ready features using GitHub Copilot and AI-assisted workflows.
- Coordinated architects, developers, QA engineers, and data scientists.
- Structured requirements, managed delivery, and resolved technical blockers directly.
- Worked with Kubernetes, Argo Workflows, ArgoCD, Helm, Terraform, Prometheus, Grafana, PostgreSQL, MongoDB, Jenkins CI/CD, and distributed systems.
- Improved data quality, reproducibility, and operational workflows for ML environments.

Federal Employment Agency

2023 , 2024

Product Owner , Public Analytics Platform

- Advanced a large analytics platform for labor market and demographic data.
- Coordinated stakeholders across public-sector and technical teams.
- Introduced structured ETL workflows and modernized operational tooling.
- Managed migration initiatives and complex system dependencies.
- Designed dashboards, admin tooling, and collaborative platform functionality.

Emil Group

2022

Product Owner , InsurTech SaaS Platform

- Stabilized delivery in a high-pressure environment after organizational disruption.
- Rebuilt client trust through structured workshops and transparent communication.
- Split a large overloaded Scrum team into clearer ownership structures.
- Designed and launched a Claims Center module from concept to production.

- Maintained execution clarity between stakeholders and engineering teams.

CLINET Platforms

2021 , 2022

Founding Product Owner , Healthcare App

- Worked in a founding product role on a mobile-first healthcare platform for hospitals.
- Coordinated hospital stakeholders, operations teams, and developers.
- Prioritized delivery aggressively to focus on highest-impact features.
- Structured ambiguous operational requirements into shippable software.
- Integrated external healthcare interfaces into the platform ecosystem.

---

03 , FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt Payment Solutions

2013 , 2018

Founder & CFO

- Built a FinTech startup around consumer payment flows and financial transaction logic.
- Worked on business model, product direction, financing, stakeholder communication, and operations.

Qcrypt AG

2016 , 2018

Founder / Product Owner , Encryption Technology

- Worked on quantum-resistant encryption technology and security-sensitive product positioning.
- Translated complex technical concepts into product, stakeholder, and investment-facing communication.

---

in_vis

Founder-level structuring / VSOP support

- Worked on early-stage company structuring topics including a virtual stock option plan (VSOP).
- Developed practical understanding of incentive alignment, equity participation, and founder-level company building.

Smart Soil Technologies

Co-Founder, Head of Digital / CFO / Project Lead

- Led digital transformation, HR, finance, ERP implementation, investor communication, and operational project work.
- Operated in a low-resource startup environment where focus, speed, and direct ownership were essential.
