

Philipp Hilbert. *Technical Product Manager, AI Neobank.*

Positioning, fintech PM with 13 years in regulated products, payments, insurance, and AI platforms, who knows where deterministic systems must stay in control.

Dear KIRA Hiring Team,

I am applying for the Technical Product Manager role on the AI Neobank App. My background spans 13 years of product ownership in regulated domains, payments, insurance, defence AI, and public-sector data platforms, and I have always worked at the intersection of technical design and product delivery rather than on one side of that line. KIRA's framing of the role resonates precisely because it names the hard parts: ledgering, reconciliation, failure handling, regulatory rails, and the deliberate question of where AI improves an outcome versus where deterministic control must stay in place.

At Kvitt Payment Solutions, I built a mobile group-based P2P payments product from zero and took it to acquisition by Sparkasse inside the girocard ecosystem. That experience taught me that money correctness is not a quality attribute to be added late, it is the product. Users who are misled about the state of their funds, even briefly, do not return. At Scheidt & Bachmann's Fuel and Convenience Retail division, I moved research results into production across a matrix organisation in a fully SAFe setup, working directly across engineering, compliance, and operations on POS and forecourt payment systems. The coordination overhead in a regulated, multi-team environment is a product problem, and I treat it as one.

On the insurance side, I shipped the Claims Center at EMIL Group from concept to production with no precedent, cut time-to-market for new insurance product launches from months to under a week, and restructured an 18-person delivery organisation that was losing its senior engineers. At KIRA, the alignment challenge across engineering, design, compliance, operations, treasury, and finance is the same class of problem at greater scale and with higher regulatory stakes. I know how to make that kind of multi-function alignment happen without friction accumulating into delay.

On AI: at Rohde & Schwarz I was the product owner for an internal AI and data platform for the FCAS European defence programme, managing a cross-functional team of 15 engineers and data scientists. I redirected strategy based on instrumented workflow analysis, the beautiful UI-led flow recorded exactly zero clicks, and championed GitOps delivery that took rollout time from days to 30 minutes. The lesson I carry from that project is that AI feature value must be evaluated against a concrete baseline, with observable outcomes and a clear fallback when the model is wrong. That is the same bar I would apply to every AI feature on KIRA's neobank stack.

I am available at short notice, comfortable working across time zones in distributed teams, and ready to move through your assessment and interview process quickly. I would welcome the chance to discuss the payments or remittance vertical in more depth.

Best regards, *Philipp Hilbert*
