

Philipp Hilbert. *Technical Product Manager, AI Stockbroking & Fintech Platform.*

Positioning, thirteen years owning regulated financial products end-to-end, from P2P payments to defence AI, now applying that range to where money meets intelligence.

§ WHY BJAК

KIRA is solving the right problem at the right moment: most retail investors in Southeast Asia are still locked out of wealth products that exist, not because the products are missing but because the access layer is broken. Building a stockbroking superapp that layers AI over payments, insurance, and trading in a single regulated surface is exactly the kind of zero-to-one, high-consequence product that demands both technical depth and regulatory discipline, not one or the other. The explicit framing that AI is a means, not the goal, is the most honest thing I have read in a fintech job description in years. *That is precisely how I have built AI products: instrument first, automate second, and keep a human-in-the-loop wherever the error is irreversible.*

§ HONEST FRAMING

I have not shipped a retail stockbroking or securities trading product specifically. My regulated fintech experience runs through P2P payments (Kvitt, acquired into the girocard ecosystem), insurance (EMIL Group), healthcare data, and defence AI, all real-money, high-consequence domains with compliance gates, ledgering requirements, and third-party rails. The mechanics of trade confirmation, settlement, and broker reconciliation are adjacent, not identical, to what I have owned. I will close that domain gap faster than most because the underlying discipline, correctness first, auditability always, AI only where deterministic systems cannot do the job, is already how I work.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo feature delivery and spec generation
- **GitHub Copilot**, daily coding assistance across Python and Kotlin
- **Cursor / VSCode**, agentic refactors and context-aware editing
- **Lovable**, rapid front-end prototyping from requirements
- **n8n**, multi-agent agentic workflow orchestration
- **GPT**, evaluation loops and edge-case generation
- **Gamma.app**, rapid stakeholder decks and product narratives
- **Framer**, design-heavy interactive prototypes

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, Docker, ArgoCD, Helm, GitOps, Jenkins, GitLab, Azure DevOps, CI/CD pipelines, REST APIs, Python, Kotlin (Spring Boot), Django, SQL, PostgreSQL, MongoDB, Kafka, Dagster, dbt, ETL pipelines, Jira, Confluence, Figma, Miro.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Two-sided B2B construction staffing marketplace, built zero-to-one as a solo founder.

- Anonymity-until-payment model protecting both firms and workers until commitment is confirmed, eliminating broker lock-in.
- WhatsApp and Telegram as the primary product surface, with LLM agents running the intake and matching funnel end-to-end.
- Funnel and conversion analysis in SQL; one person runs daily operations through agent automation.
- Direct proof of concept for KIRA's AI-native philosophy: AI handles the repeatable work, humans control the irreversible decisions.

§ HOW I WOULD WORK AT BJAK

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the compliance, engineering, and operations teams on the stockbroking vertical to map the actual data flows, identify where ledgering and reconciliation are handled today, and locate the gaps between the posted roadmap and the regulatory gates that will block launch.

WEEK 2

Instrument and slice.

Define the measurement baseline for the vertical, what "money is correct" looks like as a queryable metric, then cut the roadmap to the slice that clears the first real launch gate, whether that is KYC approval, broker connectivity, or order execution reliability.

WEEK 3+

Ship and close loops.

Drive the first production release of a feature that moves real money, validate it against the success metrics agreed in week one, and establish the cross-functional rhythm with compliance, treasury, and engineering that every subsequent launch will depend on.

I COVER LETTER

Dear Hiring Team at Bjak / KIRA,

I am applying for the Technical Product Manager role on your AI Stockbroking app. My background is thirteen years of owning regulated financial products end-to-end, from a mobile P2P payments startup that was acquired into the German girocard ecosystem, through a B2B SaaS insurance platform, to an AI and data platform for a multinational defence programme, and I am drawn to KIRA because the problem you are solving is structurally the same in every market you operate: reliable financial infrastructure is the prerequisite, and AI is the accelerant, not the other way around.

Your job description names the triad that actually determines whether a fintech product ships: regulatory requirements, third-party financial rails, and the courage to keep deterministic systems in control where correctness is non-negotiable. This is not a theoretical framework for me. At Kvitt Payment Solutions I designed the payment flows and edge-case handling for a

group-based P2P product, negotiated the integration with Sparkasse's girocard rails, and took it through to acquisition. At EMIL Group I owned the Claims Center from concept to production for a B2B insurance platform serving insurers, reinsurers, and brokers, a product where a misrouted payment or an incorrect coverage state is not a UX problem, it is a legal one. At Rohde & Schwarz I built the evaluation framework that determined where LLM-assisted analysis was trustworthy and where a human analyst had to stay in the loop.

On the AI side, I build with it daily rather than presenting it as a credential. I use Claude Code and GitHub Copilot for in-repo feature delivery, n8n for agentic workflow orchestration, and Lovable for rapid front-end prototyping. More relevantly for your context: I have shipped AI features with explicit human-in-the-loop gates, defined evaluation loops before launching any model-assisted decision, and designed audit trails that satisfy both internal governance and external regulators. At the Bundesagentur für Arbeit I introduced Dagster and dbt to replace a fragile ETL process, cutting data update time by 75% while making every transformation step auditable, that is the same discipline a fintech AI feature needs.

What I bring to the stockbroking vertical specifically is the ability to sit at the intersection of engineering, compliance, and operations and make legible decisions under constraint. At Bundesagentur für Arbeit I carried a full ETL migration, a UI relaunch, and a bare-metal-to-container migration simultaneously while serving as Deputy IT Security Officer. At CLINET Platforms I cut a five-person team's roadmap to the top 10% of features against agreed acceptance criteria, which raised user acceptance more than fivefold. I know how to make the call about what ships and what does not, and I know how to document that call so it holds up when challenged by a compliance team or a regulator.

I am comfortable working across time zones, have shipped products in multinational distributed teams, and communicate technical trade-offs in plain language to C-level and non-technical stakeholders. I would welcome the chance to go deeper on any part of the KIRA product context in your technical interview.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with 13 years of end-to-end ownership in regulated, high-consequence domains: fintech payments, insurance, defence AI, public-sector data, and healthcare. I take a vertical from strategy and metrics through technical design, delivery, and launch, and I apply AI where evaluation evidence supports it and keep deterministic systems in control where it does

not. Comfortable with the full stack from ledgering and API design to roadmap and compliance gate management. Targeting Technical Product Manager roles in regulated fintech and AI platforms.

§ WHAT I CAN DO

Fintech and Regulated Payments: P2P payment flows, PSP integration, girocard ecosystem, KYC and transaction monitoring, ledgering and reconciliation design, financial rail dependencies, regulated product launch sequencing.

AI Products and Tooling: LLM (large language model) agents, agentic workflows, evaluation loops, human-in-the-loop design, prompt and context engineering, AI governance, Explainable AI (XAI), EU AI Act; prototyping with Claude Code, GitHub Copilot, Cursor, Lovable.

Insurance and Platform: B2B SaaS platform for insurers, reinsurers and brokers; claims, policy and coverage workflows; B2B platform multi-tenancy.

Product Management: continuous discovery, product vision and roadmap, prioritisation, MVP and PoC definition, A/B testing, user research and interviews, go-to-market support, product lifecycle management.

Product Ownership: requirements engineering, user stories, acceptance criteria, epics, backlog refinement, sprint planning, velocity, release planning, UAT, Jira, Confluence, Figma, Miro.

Data and Analytics: ETL (extract, transform, load), Dagster, dbt, PostgreSQL, funnel and churn analysis, KPI definition, Matomo, MicroStrategy.

Agile and Scaled Delivery: Scrum, Kanban, SAgile (Scaled Agile Framework), ART, PI planning, GitOps rollout and rollback with ArgoCD, CI/CD, regression and end-to-end test automation.

Technical Environments: Kubernetes, OpenShift, Docker, Jenkins, GitLab, Azure DevOps, REST APIs, Python, Kotlin (Spring Boot), Django, SQL, PostgreSQL, MongoDB, Kafka.

Stakeholder and Leadership: cross-functional team leadership (15+ engineers), C-level reporting, workshop facilitation, conflict resolution, change management, Deputy IT Security Officer.

Governance: GDPR, identity management, budget ownership, ROI reasoning, EU AI Act compliance framing.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI AND DATA PLATFORM 2024-2025

Owned the AI and data platform for the FCAS programme across 15+ engineers and data scientists. GitOps with ArgoCD cut rollout from days to 30 minutes; user workflow instrumentation redirected strategy and lifted pipeline runs 200%.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023-2024

National labour-market data platform. Introduced Dagster and dbt, saving 75% per data update cycle. Migrated bare-metal to containers, launched UI relaunch and ETL migration in parallel. Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE APP 2023

Cut a five-person team's overloaded roadmap to the top 10% of features; user acceptance rose more than fivefold. Shipped CGM/KIS integration reducing digital anamnesis from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS PLATFORM 2022

Restructured an 18-person delivery organisation into three lean teams; attrition dropped from near-total to one departure. Shipped the Claims Center from concept to production; cut time-to-market for a new insurance product from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER · RETAIL PAYMENTS AND POS 2021-2022

Moved research results into production across a matrix organisation in a fully SAFe setup with agile release trains and PI planning. Stack: POS and forecourt systems, payments integration.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · SECURE GOVERNMENT DATA 2021

Data structures and identity management for the Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE B2B PLATFORM 2019-2020

Migrated a legacy procurement system to Shopware for three AOK insurers and roughly 20,000 employees; still in production.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · B2B MARKETPLACE 2025-PRESENT

Two-sided construction staffing marketplace built zero-to-one. Anonymity-until-payment model, WhatsApp/Telegram as product surface, LLM agents across the funnel, SQL-based conversion analysis.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE ENCRYPTION 2016-2021

Shipped a three-layer quantum-resistant encryption product installing in under two minutes. Later Chair of the board.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P PAYMENTS 2013-2018

Built a mobile group-based P2P payment product from zero through to acquisition and operation by Sparkasse inside the girocard ecosystem.
