Dear Hiring Team,

The Channels Proxy Product Owner, Open Finance (Corporate) role at GTB is the kind of position I have been actively targeting: it requires someone who can sit between regulators, product owners, engineers, and client-facing teams and turn the resulting complexity into something a corporate treasury client can actually use on a web portal, a mobile app, or an H2H API connection. That translation work, from regulatory framework to prioritised, deliverable digital journey, is the core of what I have done across thirteen years of product ownership in regulated environments.

At Rohde & Schwarz, I owned the AI and data platform for the FCAS European defence programme. The stakeholder map included multinational engineering teams, programme managers across Germany, France, and Spain, and compliance layers I had to satisfy before any feature shipped. I redirected the product strategy mid-programme based on instrumented workflow data, achieved a 200% increase in pipeline runs, and cut rollout time from days to thirty minutes through GitOps delivery. The skill that made that possible, holding the regulatory and technical constraint in one hand and the client workflow in the other, is exactly what the Open Finance channel mandate asks for.

At Bundesagentur für Arbeit, I was Deputy IT Security Officer while simultaneously owning a national labour-market analytics platform. I introduced Dagster and dbt to automate quarterly data imports and migrated the full system from bare metal to containers, reducing data update time by 75%. Working inside a public-sector regulatory environment with strict data governance requirements gave me a practical grounding in the kind of consent and data-sharing controls that sit at the heart of Open Finance.

Earlier, at Kvitt Payment Solutions, I built a mobile P2P payments product from zero and took it to acquisition by Sparkasse, where it was integrated into the girocard ecosystem. That experience gave me hands-on familiarity with payments infrastructure, PSP integration, and the compliance requirements of operating inside an established banking network, directly relevant to the corporate cash management and payments journeys the GTB channels team is responsible for enabling.

I am based in Berlin and actively targeting the UAE. I am prepared to relocate to Dubai and work fully on-site or hybrid, so the location is a positive fit. I am available at four weeks' notice and hold EU citizenship with no visa requirement within the EU/EEA.

I would welcome a conversation about how my background in regulated, API-heavy, cross-stakeholder product environments maps onto the Open Finance channel build-out at GTB.

Best regards, *Philipp Hilbert*
