Dear Hiring Team,

Thirteen years of product ownership in regulated industries, payments, insurance, defence AI, public-sector analytics, have taught me that the hardest part of financial services product management is not the technology or the regulatory complexity individually, but holding both in tension simultaneously while keeping a cross-functional team pointed at the right outcome. The role you have described maps closely to how I have been working.

At Kvitt Payment Solutions I took a mobile P2P payments product from zero through acquisition by Sparkasse, where it was integrated into the girocard ecosystem. That meant designing payment flows, edge-case handling, and reconciliation logic with a small team, then managing the regulatory and commercial relationship with one of Germany's largest savings bank networks. At EMIL Group I owned a B2B SaaS platform serving insurers, reinsurers, and underwriters, another regulated stakeholder environment where compliance requirements, client expectations, and engineering capacity had to be balanced against each other every sprint. I shipped the Claims Center from concept to production and cut time-to-market for new insurance product launches from months to under a week.

On the AI capability side, the posting is precise in what it is asking for: practical application within financial services products, not AI product management as a specialty. At Rohde & Schwarz I owned an internal AI and data platform for the FCAS European defence programme, managing a cross-functional team of fifteen engineers and data scientists through Scrum. I instrumented competing workflow designs with real usage data, redirected strategy based on what the data showed, and introduced GitOps delivery that reduced rollout time from days to thirty minutes. In my own ventures I have built LLM-agent pipelines in n8n, used Claude Code and GitHub Copilot daily for spec generation and in-repo work, and shipped an agentic marketplace funnel end to end as a solo operator. These are applied AI capabilities, not theoretical ones.

I am an EU citizen currently based in Berlin and actively targeting the UAE; Abu Dhabi is a location I am willing to relocate to and work fully on-site. I am available at short notice. I would welcome the opportunity to speak in more detail about the specific product area and the team structure.

Best regards, *Philipp Hilbert*
