

Philipp Hilbert. *Senior Product Manager for large-scale consumer mobile.*

Positioning, 13 years owning product in regulated industries, from national-scale public-sector analytics to healthcare mobile apps, now ready to bring that depth to Abu Dhabi.

Dear Hiring Team,

I am writing to apply for the Senior Product Manager role in Abu Dhabi. The brief is specific in a way I appreciate: strategic leadership over a large-scale, regulated, consumer-facing mobile product, with delivery teams already in place and the expectation that the successful candidate will own vision, roadmap, and stakeholder alignment rather than sprint ceremonies. That is the role I have been doing, in substance if not always in title, across the last several years.

At the Bundesagentur für Arbeit, I owned the product roadmap for a national labour-market analytics platform used by policymakers and researchers across Germany. I held the deputy IT security officer mandate concurrently, which meant that data governance, privacy requirements, and regulatory compliance were not someone else's concern that I handed off to legal, they were mine to understand, to translate into product decisions, and to defend in front of stakeholders with sharply different interests. I reduced the time per data update by close to 75 percent by introducing Dagster and dbt, but the more important work was convincing a public-sector organisation to accept automated processes in a domain where manual sign-off had been the norm. That is the kind of stakeholder work this role demands.

At CLINET Platforms, I led a mobile patient application for iOS and Android, piloted in live hospital environments. A five-person team faced a roadmap it could not possibly deliver. My first move was not to add capacity or push back timelines, it was to cut ruthlessly, reducing the backlog to the top ten percent of features against agreed success measures. User acceptance rose more than fivefold. I also shipped the integration with CompuGroup Medical's hospital information system, reducing the digital anamnesis process from thirty minutes to five. Both results came from the same discipline: defining what would count as success before building, and checking afterwards whether it happened.

The posting mentions the importance of balancing short-term delivery demands with long-term strategic objectives and of empowering delivery teams while maintaining product direction. At Rohde & Schwarz, I led a cross-functional team of fifteen engineers and data scientists on an internal AI and data platform for the FCAS European defence programme. I redirected the product strategy mid-cycle based on instrumented workflow analysis, the beautifully designed UI-led feature recorded exactly zero clicks, so we reprioritised toward developer-code-first tooling and saw pipeline runs increase two hundred percent. Redirecting strategy with evidence rather than opinion, without undermining the team's confidence in the process, is a specific skill.

Abu Dhabi is a location I am actively targeting. I am an EU citizen, I am prepared to relocate, and I am available at short notice. I would welcome a conversation about the role and the product.

Best regards, *Philipp Hilbert*
