

Philipp Hilbert.

Payments PM for a high-growth MENA Fintech.

Positioning, payments product manager with a founded-and-exited P2P payments company, a decade of regulated-industry delivery, and hands-on funnel and SQL analytics.

Dear Hiring Team,

I am writing to apply for the Product Manager, Payments role. My interest is grounded in specifics: I founded and ran Kvitt Payment Solutions, a mobile group-based P2P payments product built from scratch and ultimately acquired by Sparkasse to operate inside the girocard ecosystem. Owning that product meant owning the full customer funding journey, onboarding, account funding, disbursements, failed-payment handling, and every edge case in between. That experience is the direct antecedent of what this role asks for.

Beyond the founding experience, I have spent eight years as an active participant in crypto markets, including perpetual futures trading on Hyperliquid, spot execution on CEX and DEX venues, and cross-chain bridging via protocols like Across and 1inch. I work regularly with liquidation heatmaps and execution analytics on platforms such as Coinglass and Hyblock Capital, and I study routing, slippage, price impact, and market microstructure as a practical discipline. The posting's preference for backgrounds in crypto exchanges, neobanks, and CFD brokerages fits: I understand the infrastructure layer, stablecoins, custody, payment provider routing and cascading, not just the surface UX.

On the data-led side, I run funnel analysis in SQL as a standard working practice, not as an occasional reporting exercise. At Bundesagentur für Arbeit I owned the analytics platform end to end, redesigning the ETL pipeline with Dagster and dbt and cutting time per data update by 75%. At construct8, my B2B marketplace side project, conversion tracking in SQL is the primary tool for prioritisation decisions. The posting asks for exactly this combination of data fluency and payments domain depth, and I can bring both from day one.

I work well across Engineering, Compliance, Finance, and Commercial stakeholders because I have had to. At EMIL Group I rebuilt a fracturing 18-person delivery organisation into three stable teams after near-total senior engineer attrition, restoring client trust while shipping the Claims Center from concept to production. At Rohde & Schwarz I redirected platform strategy based on instrumented user workflow data, the UI-led approach recorded zero clicks; the developer-code-first approach increased pipeline runs by 200%. I am used to making the case with evidence rather than opinion, and to moving fast once the evidence is clear.

Dubai is an active target for me, not a relocation compromise: I am an EU citizen with no visa constraints in the EU/EEA, and I am genuinely excited about the pace of payments infrastructure development in the MENA region. The hybrid arrangement, three days in the Dubai office, suits me well.

I would welcome the chance to talk through how my background maps to the specific deposit and withdrawal challenges you are working on.

Best regards, *Philipp Hilbert*
