

Philipp Hilbert. *AI product manager who ships, not just specifies.*

Positioning, thirteen years of end-to-end product ownership across defence AI, public-sector analytics, payments, and enterprise SaaS, the stack Halian's client needs to build AI-native products for government and enterprise in Abu Dhabi.

To the Halian team and the hiring organisation in Abu Dhabi,

The role you are filling is one I have been doing in substance for thirteen years, most recently in two environments that map directly onto what you describe: a multinational defence AI programme at Rohde & Schwarz where I owned platform delivery for FCAS, and a national public-sector analytics platform at the Federal Employment Agency where I was also Deputy IT Security Officer. Both required the same combination this posting calls for, translating ambiguous government mandates into concrete product roadmaps, managing senior stakeholders across technical and non-technical audiences, and making credible technical decisions under delivery pressure.

On the AI side, I am not learning these tools in preparation for the role; I use them to do the work now. I built my own multi-agent coding framework (Liberation of Bajor), designed the LLM-agent funnel for my construction-staffing marketplace construct8, and work daily with Claude Code, GitHub Copilot, Lovable, and n8n for agentic workflow automation. When a job description lists RAG architectures, LLM agents, and AI-native product tooling as requirements, I can evaluate those capabilities against real delivery constraints rather than vendor slides.

Client-facing communication with government and executive audiences is something I have done across German federal institutions, the Federal Employment Agency, Bundesdruckerei, and ministry-level security programmes, where the trust requirements and procurement sensitivities are comparable to the UAE public sector. I understand how to run a workshop with senior stakeholders who are skeptical, how to present product strategy to a C-level audience that does not want to hear about backlog mechanics, and how to hold vendors accountable to scope and timeline without burning the relationship.

The Abu Dhabi location is not a compromise for me. I am actively targeting the UAE and prepared to relocate: the scale of ambition in the region's digital and AI transformation programmes is precisely the environment where the kind of product judgment I have built over thirteen years is most useful.

I would be glad to walk through any of the specific engagements mentioned here in more detail. The YouTube link in my profile (youtube.com/watch?v=nt06f71lgfE) shows a product pitch I delivered in English for Qcrypt AG if the team wants a quick read on communication style before a first call.

Best regards, *Philipp Hilbert*
