

Philipp Hilbert. *Platform-first B2B product leader for merchant lifecycle.*

Positioning, 13 years of end-to-end B2B product ownership in regulated industries, with a track record of turning fragmented merchant journeys into connected, self-serve platforms.

Tabby is solving the problem I find most interesting in fintech: turning a strong product suite into a platform that feels like a single, coherent system to the merchant using it. The job description is precise about where the hard work lives, shared permissions, lifecycle communications, a cross-sell engine, and internal adoption of platform capabilities. Those are not feature requests; they are the connective tissue that determines whether a multi-product fintech scales or fragments.

My most directly comparable engagement was at EMIL Group, a B2B SaaS platform serving insurers, reinsurers, brokers and underwriters. When I arrived, an 18-person delivery organisation was losing its senior engineers, client trust was eroding, and no shared foundations existed across the product lines. I restructured the organisation into three lean teams with clear ownership boundaries, then shipped the Claims Center, a net-new product, from concept to production, cutting time-to-market for a new insurance product from months to under a week. The mechanism was not heroics; it was defining the shared states, permissions and lifecycle stages once, so each team could build on them instead of rebuilding them.

At Rohde & Schwarz I did the same for an internal AI data platform: introduced GitOps delivery with ArgoCD across a multinational team, cut rollout time from days to 30 minutes, and made the platform hotfix-capable. More importantly, I killed the beautiful UI that nobody clicked and redirected the product to the developer-code-first surface that people actually used. That discipline, instrument before you commit, let usage data set direction, is how I approach merchant lifecycle work too. Time-to-first-value and products-per-merchant are not reporting metrics; they are the signal that tells you whether your onboarding and cross-sell logic is actually working.

My fintech background is adjacent rather than identical: Kvitt Payment Solutions, a mobile P2P payments startup I built from zero and took to acquisition inside the Sparkasse girocard ecosystem, gave me direct experience in payment UX, funnel friction and the compliance constraints that shape what a self-serve flow can and cannot do. I have also built a two-sided B2B marketplace, construct8, from scratch, alone, with LLM agents across the funnel and an anonymity-until-payment model that protects both parties until commitment. I say this not to pad the list but because running a zero-to-one product solo, with agentic automation doing the operational work, is the clearest proof I have that I hold the whole value chain in view rather than just the backlog.

Tabby's mission, financial systems that work for people rather than institutions, is one I find credible because the product evidence supports it. I would bring the systems mindset, the B2B platform experience and the data-first discipline this role needs.

Best regards, *Philipp Hilbert*
