

Philipp Hilbert. *Pricing-domain Product Owner with a decade of B2B SaaS delivery.*

Positioning, ten years translating messy operational workflows into production software – now focused on pricing intelligence where domain complexity and delivery rigour both matter.

§ WHY SIMON-KUCHER

Simon-Kucher Engine occupies a rare intersection: deep commercial strategy expertise expressed through SaaS products that actually ship and scale. The job description calls explicitly for someone who can own the full lifecycle from discovery to post-release validation – which is precisely where the interesting product work sits, not in writing tickets but in closing the loop between what clients want and what engineers build. The pricing domain rewards structured thinking about value and feasibility, two lenses I apply in every discovery cycle. *That is exactly the kind of problem space where rigorous requirements engineering and delivery ownership compound into measurable client impact.*

§ HONEST FRAMING

Pricing software as a domain is new to me – I have not shipped a pricing engine or revenue-management product. The transferable mechanic is strong: I have spent the last four years decomposing complex, multi-stakeholder business rules (insurance product configuration, labour-market analytics, defence-grade data pipelines) into testable acceptance criteria and delivery increments, which is structurally the same challenge pricing SaaS presents.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo specification and refactor work
- **GitHub Copilot**, assisted implementation alongside engineering
- **Lovable**, rapid front-end prototyping for stakeholder validation
- **Framer**, design-heavy mock-ups and client-facing demos
- **GPT**, edge-case generation and user-story drafting
- **Gamma.app**, product documentation and release collateral
- **n8n**, agentic workflow design and multi-step automation
- **Cursor / VSCode**, day-to-day development environment

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, GitOps pipelines, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, AngularJS, Ionic, low-code insurance platforms, CGM hospital-system API integration, Shopware, CI/CD with integrated test gates.

§ SIDE PROJECT

CRYPTO BACKTEST & AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal research infrastructure for algorithmic trading and market-microstructure analysis.

- Builds a backtesting engine for crypto markets covering spot, perpetuals, and cross-chain execution scenarios.
- Combines a file-queue-based agent loop with LLM-assisted decision layers — a custom multi-agent orchestration pattern rather than an off-the-shelf framework.
- Draws on real execution data from Hyperliquid, Jupiter, and 1inch to validate routing and slippage models.
- Demonstrates the same data-pipeline and analytics-platform thinking applied at Bundesagentur für Arbeit, now applied to a personally owned product with no delivery team to fall back on.

§ HOW I WOULD WORK AT SIMON-KUCHER

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit in on client onboarding calls and sprint ceremonies, read the existing backlog end-to-end, and produce a written map of where discovery artefacts are thin, where acceptance criteria are ambiguous, and where handoff between business and engineering loses signal.

WEEK 2

Sharpen one slice.

Pick the highest-friction user story in the current sprint, rewrite it with precise acceptance criteria and a process-flow diagram, walk it through with engineering and a client-facing consultant, and document what changed – establishing a repeatable refinement standard.

WEEK 3+

Ship, close loops.

Own a full release cycle: drive the release coordination across engineering, operations, and support; write the release notes and user-facing documentation; collect post-release usage data; and feed findings back into the next discovery cycle.

I COVER LETTER

Dear hiring team,

I am applying for the Product Owner role at Simon-Kucher Engine. I have spent the past ten years doing exactly what this posting describes: taking ambiguous, multi-stakeholder business requirements and turning them into structured backlogs, testable acceptance criteria, and shipped software. The environments have been varied – a European defence programme, a public labour-market analytics platform, a B2B InsurTech SaaS, a hospital mobile app – but the core challenge has been consistent: translate complexity into clarity, and keep the delivery team moving.

The posting asks for someone who owns the end-to-end release lifecycle. At Rohde & Schwarz, working on the FCAS defence programme, I did exactly that for a multimodal AI data management platform: I owned requirements from discovery through GitOps-based rollout, introduced ArgoCD, and cut deployment times from several days to under forty minutes. At

Emil Group, I inherited a 17-person team that had lost sprint discipline and client trust. I split the team into smaller Scrum units, reintroduced velocity tracking, ran weekly product workshops with the client, and reduced senior developer attrition from near-total to a single departure over my tenure. Both cases required the same skill the Simon-Kucher Engine role demands: knowing when to slow down and clarify, and when to push through and ship.

Pricing software is a new domain for me and I want to name that directly. What I bring is a decade of breaking down complex business logic – insurance product configuration, public labour-market indicators, secure government data pipelines – into requirements that engineers can act on and clients can validate. The structural problem is the same: a business rule that lives in a consultant's head or a client's spreadsheet needs to become a testable feature with clear boundaries. That translation is where I operate best.

Simon-Kucher occupies an interesting position: forty years of commercial strategy expertise now being expressed through products that scale and compound. That combination of domain depth and delivery ambition is more interesting to me than a pure-play SaaS shop, because the requirements engineering challenge is harder and the client impact is more direct. I would be joining a team that measures success by whether clients actually grow revenue – which is a more honest product signal than most.

I am based in Berlin, fluent in both German and English, available within four weeks of an offer, and genuinely curious about pricing as a discipline. I would welcome a conversation about the product and the team.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience across B2B SaaS, regulated environments, and complex operational software. Brings a consistent track record of translating multi-stakeholder business requirements into structured backlogs, testable acceptance criteria, and shipped features – across InsurTech, public analytics, defence-grade data platforms, and healthcare. Comfortable owning the full product lifecycle from discovery through post-release validation. AI-native in daily workflow. Operates with low ego and high delivery accountability.

§ CORE STRENGTHS

- Breaking complex business requirements into testable user stories and acceptance criteria
- Full release-lifecycle ownership: discovery through post-release validation
- Cross-functional alignment across business, engineering, QA, and operations
- Sprint discipline and backlog management under delivery pressure
- Stakeholder communication with both technical and non-technical audiences
- AI-native product execution and rapid prototyping
- Data-driven prioritisation and KPI-oriented product thinking
- Workshop facilitation and structured client engagement
- Technical fluency across modern SaaS and data engineering stacks

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Improved data quality through filtering, tagging, reproducible transformation pipelines, and full audit trails with data provenance
- Unblocked an infrastructure-level issue in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Delivered new platform features including labour shortage analytics, regional comparison tooling, and modernised admin workflows
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and managed major system upgrades

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline on a bloated 17-person team: split into smaller Scrum units, introduced ownership and deputy concepts, reintroduced velocity tracking
- Regained client trust through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
 - Integrated CGM interface into hospital information system workflows
 - Built stakeholder trust through transparent communication of technical complexity across legacy APIs and external databases
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for backup, restore and checkpoint features, and data-encryption based on one-time-pad keys and true random number generator hardware
- Designed for setup under two minutes with no technical knowledge required
- Served concurrently as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval workflows
