

Philipp Hilbert. *B2B product operator who ships integrations, not slide decks.*

Positioning, ten years building enterprise workflows, API integrations, and cross-functional delivery systems for regulated, ambiguity-heavy environments.

§ WHY FREENOW

Freenow's B2B integration vertical sits at exactly the intersection where I have spent the last several years: replacing slow, manual enterprise processes with automated, API-driven workflows in environments where Sales, Operations, and Engineering each speak a different language. The posting calls out "non-app ordering experiences that replace outdated manual processes" — this is precisely the problem space I worked through at Emil Group, where the entire goal was reducing insurance product time-to-market from over a year to under a week through structured configuration, automation, and workflow product design. Freenow's recent Lyft acquisition adds a layer of cross-market complexity that makes the integration surface more interesting, not less. *That is exactly the environment where deliberate structure-building creates asymmetric leverage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo specs and edge-case generation
- **GPT**, rapid requirement drafting and stakeholder communication
- **GitHub Copilot**, implementation-support workflows
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy iteration

- **Gamma.app**, structured stakeholder presentations
 - **n8n**, agentic workflow design and automation
 - **Cursor / VSCode**, AI-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, Docker, Django, AngularJS, Ionic, Redpanda, CGM API integration, MicroStrategy, low-code platform tooling.

§ HOW I WOULD WORK AT FREENOW

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow Sales conversations with enterprise customers and map the current manual booking workflow end to end – including every handoff, workaround, and undocumented dependency – before touching the roadmap.

WEEK 2

Slice and prioritise.

Work with Engineering to define the narrowest integration slice that delivers measurable time savings for one pilot customer, and write the first spec detailed enough that an engineer could start without a follow-up call.

WEEK 3+

Ship, measure, loop.

Drive the pilot to a working demo state, instrument the KPIs agreed in week one, and feed the findings back into the roadmap before the first full sprint review.

I COVER LETTER

Dear Freenow team,

I am applying for the Product Manager role in your B2B Integration vertical. I have spent the better part of a decade doing one thing consistently: taking enterprise environments where process is broken or missing and building the product layer that makes them function at scale. That is not a generalisation – it is what I did at Emil Group, at Rohde & Schwarz, and at the Federal Employment Agency, each in a different sector but always with the same core problem: complex operational reality, teams that cannot wait for clarity, and a product person who has to create structure where none exists.

The Freenow posting describes automated booking workflows and non-app ordering experiences that replace manual processes. At Emil Group, the core challenge was identical in structure: insurers were managing product configuration through spreadsheets and phone calls, and the platform existed to replace that with parameterised, auditable, workflow-driven product issuance. I designed and delivered the Claims Center module from concept to production, rebuilt sprint discipline on a 17-person team that had lost delivery rhythm, and introduced structured communication practices that recovered client trust in a prototype-stage environment. That work required exactly the ability the job description names: defining structure where none exists, managing stakeholders without direct authority, and keeping engineering moving through documented, independent-buildable specifications.

At Rohde & Schwarz, I delivered autonomous feature sets within a multinational defence programme – writing user stories, acceptance criteria, implementation support, and GitOps rollout on a platform that had to satisfy data provenance and auditability requirements for government stakeholders. I unblocked an infrastructure issue in OpenShift independently, shipping a feature in one week that a project lead had been requesting from engineers for over a year. I mention this not to imply that infrastructure speed is relevant to this role, but because it illustrates how I work in resource-constrained, cross-functional environments: I find the blocker, assess whether I can resolve it directly, and do not wait for permission to act.

On the B2B integration and API side specifically, I have worked across CGM API integration in hospital systems, REST API design in InsurTech, ETL pipeline product ownership with Dagster and dbt, and payment system product design including PSP integration at Kvitt. The common thread is comfort with backend workflow complexity and the discipline to document it clearly enough that engineering teams can build from the spec without repeated clarification.

My German is native and my English is C2. I am based in Berlin and open to the Hamburg or Barcelona office. I would welcome the chance to talk about the specific integration problems your enterprise customers are raising right now.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with close to ten years of experience turning complex operational workflows into scalable, documented software systems. Background spans B2B SaaS, public sector analytics platforms, regulated environments, and founder-level company building. Comfortable in ambiguity, fluent in the language of Engineering and Sales equally, and consistently able to create delivery structure where none existed before. Strongest in environments where the problem is underspecified, the team is cross-functional, and the output needs to be something a developer can build from independently.

§ CORE STRENGTHS

- B2B workflow analysis and API integration product design
 - Writing engineering-ready specs in ambiguous, fast-moving environments
 - Cross-functional alignment across Sales, Engineering, and Operations
 - Backlog management, sprint discipline, and velocity recovery
 - KPI definition and data-driven prioritisation
 - Stakeholder communication in prototype and pilot-stage products
 - AI-native product execution and rapid prototyping
 - Technical fluency across backend systems, REST APIs, and infrastructure
 - Founder-level pragmatism: low ego, high agency, no waiting
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature requested from engineers for over a year
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD

- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Managed multinational stakeholder communication on data transformation, transparency, and auditability requirements

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling across a public-facing analytics platform
- Designed interactive dashboards and community features used by regional labour market stakeholders
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production on a B2B platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters
- Rebuilt sprint discipline and delivery stability on a bloated 17-person team; split into smaller Scrum units with clear ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Recovered client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core mobile flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows — a backend API integration across legacy systems with external database dependencies
- Built stakeholder trust through transparent communication of technical complexity under tight delivery deadlines
- Led small, focused team with strict prioritisation on highest-leverage features

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

Quantum-secure encryption product built on one-time-pad keys and true random number generator hardware. Core USP: fully operational setup under two minutes, no technical knowledge required.

- Owned backup, restore and checkpoint architecture and full data-encryption product design
- Served as deputy IT security officer; responsible for attack vector analysis and security governance
- Represented product externally in business development and investor contexts

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

Group-based P2P payment product on a P2P backbone, later acquired and operated by Sparkasse.

- Owned full UX/UI design, PSP integration, and mobile app prototype
- Managed payment flow edge cases, consumer payment UX, and operator-side financial operations

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Project Lead

Intelligent self-regulation fertiliser and substrate solutions for vertical indoor farming.

- Established digital tooling, financial and investment planning, HR infrastructure, and ERP introduction across multiple funding phases
