

Philipp Hilbert. *Technical Product Manager who turns ambiguity into executable backlogs.*

Positioning, hands-on PM with ten years delivering complex software products, now ready to own delivery, specification, and execution across three products from day one.

§ WHY INGENIOUS LION

Ingenious Lion sits at the intersection of data infrastructure and marketing technology, building internal products that have to earn adoption from sophisticated users inside Publicis Groupe rather than from the open market. That constraint produces unusually rigorous product thinking. The job description is honest about where things stand: products in flight, ambiguity to resolve, structure to introduce without slowing down delivery. That is not a warning for me, it is a description of the conditions where I do my clearest work. The explicit expectation that the TPM owns context, specification, and execution alignment across two engineering teams is exactly the scope I have operated at across defence, public sector, and InsurTech.

That is exactly the environment where my strengths compound.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, specification drafting, edge-case generation, backlog refinement
- **GPT**, stakeholder-facing summaries, acceptance criteria review
- **GitHub Copilot**, in-repo code review and implementation support
- **Cursor / VSCode**, autonomous feature delivery and codebase navigation
- **Lovable**, rapid front-end prototyping for concept validation

- **Framer**, design-heavy wireframes and stakeholder walkthroughs
 - **n8n**, agentic workflow design and process automation
 - **Gamma.app**, structured documentation and presentation artefacts
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Docker, Jenkins, Bitbucket, Git, GitOps, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Django, AngularJS, Ionic, Jira, Azure DevOps, low-code insurance platforms, CGM API integration.

§ SIDE PROJECT

CRYPTO DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal infrastructure for automated crypto market analysis and algorithmic trading.

- Builds a file-queue-based multi-agent loop for market data ingestion, signal generation, and trade execution.
 - Combines a backtesting engine with live connectors to Hyperliquid, Jupiter, and 1inch for perpetuals and DEX spot routing.
 - Architecture uses Python agent orchestration with structured logging for reproducible strategy evaluation.
 - Demonstrates the systems thinking and autonomous delivery habits directly transferable to data-product work at Ingenious Lion.
-

§ HOW I WOULD WORK AT INGENIOUS LION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview the Business Product Manager, engineering leads, and any available documentation to produce a written map of what each of the three products has shipped, what is in progress, and where specification or dependency gaps exist.

WEEK 2

Triage and structure.

Work through the existing backlog in Jira or Azure DevOps with engineering leads, apply consistent acceptance criteria templates, identify the highest-risk items with missing specs, and produce a first dependency matrix across teams.

WEEK 3+

Ship and close loops.

Own the refinement cadence, keep the backlog groomed two sprints ahead, run the dependency tracking rhythm, and surface risks to stakeholders before they become blockers.

I COVER LETTER

Dear Hiring Team at Ingenious Lion,

The job description describes a moment I recognise well: products that exist, teams that are working, and a structural gap where no one currently holds the full delivery context. At Rohde & Schwarz I joined a FCAS programme where the backlog was fragmented across engineers, architects, and data scientists with no single owner. Within the first three weeks I had mapped what was built, what was in flight, and what was blocking the project lead's highest-priority requests. One of those blockers had been outstanding for over a year. I delivered it in a week. That kind of fast context acquisition followed by concrete unblocking is exactly what the Technical Product Manager role at Ingenious Lion requires.

The pairing model you describe, a Business Product Manager owning market fit and a TPM owning delivery and specification, is one I have worked in repeatedly. At Emil Group I sat between a commercial product lead managing insurer relationships and an engineering organisation under severe delivery pressure. I re-established sprint discipline, split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt client trust through weekly product workshops. The commercial side recovered. The engineering side stopped losing senior developers. The pattern holds across contexts: structured delivery ownership stabilises both sides of the partnership.

On the technical side, I have shipped production software across Kubernetes, GitOps pipelines, ETL platforms, and mobile healthcare systems. I am not a developer, but I can read code, unblock infrastructure issues independently, and write specifications that engineers act on without a round of clarifying questions. At the Federal Employment Agency I served simultaneously as product manager and Deputy IT Security Officer, managing compliance, data lineage, and governance for a public analytics platform. That combination of delivery pace and quality discipline is something I carry into every engagement.

I am also genuinely interested in the domain. Publicis Groupe operates at a scale where internal data and media tooling becomes a competitive capability in its own right, not just supporting infrastructure. Building products for that context, where the users are sophisticated agency and media teams and the margin for low-quality tooling is thin, is a meaningful problem. Ingenious Lion's stated commitment to quality over comfort, and the honesty in the job description about what the role actually requires, signals an organisation I would enjoy working inside.

I am available within four weeks and based in Berlin with flexibility on location. I would welcome a conversation about the three products in scope and where the delivery gaps are most acute.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Technical Product Manager with nearly ten years translating complex operational workflows into dev-ready specifications and shipped software. Comfortable absorbing a fragmented product landscape fast, establishing backlog structure and dependency tracking from scratch, and serving as the stable link between engineering teams and business stakeholders.

Background spans defence AI platforms, public sector analytics, InsurTech SaaS, mobile healthcare, and government data infrastructure. Operates with founder-level pragmatism: low ego, high agency, focused on unblocking delivery rather than managing process for its own sake.

§ CORE STRENGTHS

- Fast context acquisition across complex, multi-product landscapes
- Backlog ownership: work breakdown, acceptance criteria, estimation, refinement
- Technical specification that engineers execute without clarifying rounds
- Cross-team dependency tracking and proactive risk communication
- Stakeholder alignment across business and engineering simultaneously
- Sprint discipline and delivery process introduction in scaling teams
- AI-native tooling applied to specification, prototyping, and delivery
- GitOps, Kubernetes, and CI/CD fluency at PM depth
- Founder-level pragmatism under ambiguity and incomplete requirements

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Mapped and owned a fragmented backlog across architect, data scientists, backend, frontend, and QA; delivered autonomous feature sets end-to-end from user stories through GitOps rollout
- Unblocked an infrastructure-level OpenShift blocker independently, delivering in one week a feature the project lead had been requesting from engineers for over a year
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Managed cross-functional delivery with multinational stakeholders on a European defence programme (FCAS)
- Owned data transformation, transparency, and auditability requirements including SafeAI and ExplainableAI concepts

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned backlog and delivery for the Arbeitsmarktmonitor analytics platform; introduced Dagster for automated ETL and indicator generation, standardised CI/CD with full test integration
- Managed dependencies across data engineering, frontend, and infrastructure workstreams; tracked delivery against roadmap milestones
- Served as Deputy IT Security Officer (IT-SV) with responsibility for compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and managed major platform upgrades without service interruption
- Delivered labour shortage analytics, regional comparison features, and modernised admin tooling

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability in a team under severe pressure; split a bloated 17-person team into focused Scrum units and introduced ownership and deputy structures
- Reintroduced velocity tracking and structured refinement practices that had been lost under delivery pressure
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure
- Delivered Claims Center module from concept to production; owned modules across pricing, underwriting, policy issuance, document management, and workflow automation

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned backlog and delivery for a mobile-first hospital app across iOS and Android under tight deadlines
- Managed dependencies against legacy CGM API and external hospital information systems; communicated technical complexity transparently to non-technical stakeholders
- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- Owned product backlog for RKI projects DIM and DESH; delivered secure data structures and identity management features in a high-compliance, high-visibility environment
 - Managed delivery coordination across government stakeholders with strict data governance requirements
-

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Drove migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policy flows
 - Coordinated delivery across external development team and internal business stakeholders
-

§ FOUNDER AND EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner and Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product (one-time-pad, true-RNG hardware); defined backup, restore, checkpoint, and encryption flows
- Served as deputy IT security officer; handled attack vector analysis and compliance documentation
- Product USP: setup under two minutes, no technical knowledge required

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built group-based P2P payment product from concept through mobile app prototype; owned PSP integration and full UX/UI design
 - Product later acquired and operated by Sparkasse
-
