

Philipp Hilbert. *Technical Product Manager who turns ambiguity into executable backlogs.*

Positioning, hands-on PM with ten years delivering complex software products, now ready to own delivery, specification, and execution across three products from day one.

Dear Hiring Team at Ingenious Lion,

The job description describes a moment I recognise well: products that exist, teams that are working, and a structural gap where no one currently holds the full delivery context. At Rohde & Schwarz I joined a FCAS programme where the backlog was fragmented across engineers, architects, and data scientists with no single owner. Within the first three weeks I had mapped what was built, what was in flight, and what was blocking the project lead's highest-priority requests. One of those blockers had been outstanding for over a year. I delivered it in a week. That kind of fast context acquisition followed by concrete unblocking is exactly what the Technical Product Manager role at Ingenious Lion requires.

The pairing model you describe, a Business Product Manager owning market fit and a TPM owning delivery and specification, is one I have worked in repeatedly. At Emil Group I sat between a commercial product lead managing insurer relationships and an engineering organisation under severe delivery pressure. I re-established sprint discipline, split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt client trust through weekly product workshops. The commercial side recovered. The engineering side stopped losing senior developers. The pattern holds across contexts: structured delivery ownership stabilises both sides of the partnership.

On the technical side, I have shipped production software across Kubernetes, GitOps pipelines, ETL platforms, and mobile healthcare systems. I am not a developer, but I can read code, unblock infrastructure issues independently, and write specifications that engineers act on without a round of clarifying questions. At the Federal Employment Agency I served simultaneously as product manager and Deputy IT Security Officer, managing compliance, data lineage, and governance for a public analytics platform. That combination of delivery pace and quality discipline is something I carry into every engagement.

I am also genuinely interested in the domain. Publicis Groupe operates at a scale where internal data and media tooling becomes a competitive capability in its own right, not just supporting infrastructure. Building products for that context, where the users are sophisticated agency and media teams and the margin for low-quality tooling is thin, is a meaningful problem. Ingenious Lion's stated commitment to quality over comfort, and the honesty in the job description about what the role actually requires, signals an organisation I would enjoy working inside.

I am available within four weeks and based in Berlin with flexibility on location. I would welcome a conversation about the three products in scope and where the delivery gaps are most acute.

Best regards, *Philipp Hilbert*
