

Philipp Hilbert. *Product Manager who ships full lifecycle, not just requirements.*

Positioning, a hands-on PM with nearly ten years of end-to-end product delivery across regulated, B2B SaaS environments – ready to drive First Advantage's screening platform forward.

Dear First Advantage hiring team,

Product management in a regulated, operationally complex environment is not primarily about generating ideas – it is about translating messy real-world workflows into requirements that a development team can actually execute, and then staying accountable through delivery. That is the work I have been doing for nearly ten years, across a government defence AI programme, a public labour market analytics platform, and a B2B InsurTech SaaS serving primary insurers, reinsurers, and brokers.

The requirement that stood out most in your posting is the mandate to support a unified customer experience across First Advantage's largest platforms. At Emil Group, the InsurTech platform I joined had a 17-person team in delivery paralysis, fragmented sprint discipline, and near-total senior developer attrition. I split the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops that rebuilt client trust inside a prototype-stage environment. The result was stable delivery and a single departure instead of a team collapse. The underlying challenge – making a large, multi-module platform feel coherent to its users – is directly relevant to what First Advantage is working toward.

The requirement for strong technical stakeholder management is also one I take seriously. At Rohde & Schwarz, I owned a cross-functional team spanning an architect, data scientists, backend and frontend engineers, and QA, within a multinational European defence programme. I did not just write stories: I unblocked infrastructure-level OpenShift issues independently, reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD, and delivered in one week a feature that the project lead had been requesting from engineers for over a year. Being technically fluent enough to understand what a team is dealing

with – and occasionally to move the blocker yourself – changes the working relationship with engineers in a useful way.

On the Agile methodology requirement: my experience is operational, not certificated. At the Federal Employment Agency, I managed a running analytics platform through major system upgrades, CI/CD standardisation, and new feature delivery while also serving as Deputy IT Security Officer. At CLINET Platforms, I delivered a mobile healthcare app across iOS and Android under tight deadlines, integrating legacy hospital information system APIs that had no documentation. Agile in practice means making the best call with incomplete information, communicating transparently when something will slip, and keeping the team oriented on what matters most – that is the version of it I have been practising.

I am based in Berlin, available within four weeks of an offer, and comfortable with the NOAM time zone coverage the role requires. I would welcome a conversation about how my background maps to First Advantage's current product priorities.

Best regards, *Philipp Hilbert*
