

Philipp Hilbert. *Enterprise SaaS Product Manager with a decade of mission-critical delivery.*

Positioning, ten years turning complex industrial and regulated workflows into shipped software, now bringing that discipline to Embrace's asset-intensive client base.

§ WHY EMBRACE

Embrace serves industries where a broken workflow is not an inconvenience but a production halt or a compliance failure — exactly the stakes that shaped how I work. The job description calls out predictive analytics, inspection intelligence, and intelligent workflow automation as the next frontier for the platform, which maps precisely onto work I did at Rohde & Schwarz building AI data pipelines for a European defence programme and at the Federal Employment Agency building analytics platforms with full audit trails. Working across a portfolio of established enterprise clients in chemicals, automotive, and oil and gas means the PM role is about sustained trust as much as feature velocity. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
- **GPT**, stakeholder communication drafts, user story elaboration
- **GitHub Copilot**, implementation support and code review alongside engineers
- **Cursor / VSCode**, in-repo navigation and refactoring during feature delivery
- **Lovable**, rapid front-end prototyping before engineering commitment

- **n8n**, agentic workflow automation and process prototyping
 - **Gamma.app**, roadmap and stakeholder presentation authoring
 - **Framer**, design-heavy prototype work and UX validation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Docker, Django, AngularJS, Ionic, CGM API integration, Shopware, low-code insurance platforms.

§ SIDE PROJECT

CRYPTO DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal infrastructure for algorithmic crypto analysis and autonomous agent tooling.

- Builds file-queue-based agent loops for market data ingestion and signal generation across centralised and decentralised venues.
 - Backtesting engine architecture using Python with structured data pipelines; feeds into perpetual futures strategy evaluation.
 - Integrates liquidation heatmap data from Coinglass and Hyblock Capital for market microstructure analysis.
 - Demonstrates autonomous, end-to-end product-and-build capability directly relevant to Embrace's intelligent workflow automation and predictive analytics roadmap.
-

§ HOW I WOULD WORK AT EMBRACE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow client-facing calls and read existing backlog items to understand where requirements are thin, where sprint discipline has drifted, and which industrial workflows are most poorly modelled in the current platform.

WEEK 2

Sharpen the backlog.

Run a structured refinement pass on the highest-priority items, rewriting ambiguous user stories to include explicit acceptance criteria and flagging dependencies on QA and data teams early.

WEEK 3+

Ship and track.

Facilitate the first full sprint cycle with the revised process, instrument delivery velocity and release readiness metrics, and establish a lightweight weekly stakeholder sync that keeps engineering heads-down and leadership informed.

I COVER LETTER

Dear Hiring Team at Embrace,

Industrial software lives or dies on precision. A requirements gap that would be a minor inconvenience in consumer software becomes a compliance risk or an unplanned shutdown when the client is a top-ten chemical producer or a major oil and gas operator. That reality is exactly what drew me to this role. I have spent the last several years working in environments with identical stakes: a European defence programme requiring full AI data provenance and auditability, a public analytics platform for Germany's Federal Employment Agency governed by strict IT security mandates, and a B2B InsurTech platform where a misconfigured underwriting rule can affect policy issuance across an entire product line.

At Rohde & Schwarz I owned the product of a central AI data management platform within the FCAS programme. I delivered autonomous feature sets end-to-end – user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout – and unblocked an infrastructure issue in OpenShift that had been open for over a year, resolving it independently in one week. That is the kind of hands-on execution posture I bring to a PM role: I do not write tickets and wait; I move with engineers toward the problem. I cut deployment times from several days to under forty minutes by introducing ArgoCD, which gave the team a concrete signal that product and engineering were aligned on operational quality, not just feature delivery.

At Emil Group I inherited an InsurTech platform where sprint discipline had collapsed and a seventeen-person team had become a single, undifferentiated bottleneck. I split the team into structured Scrum units, reintroduced velocity tracking and formal refinement ceremonies, and rebuilt client trust through weekly product workshops. Senior developer attrition – which had been near-total – dropped to a single departure across my tenure. The job description asks for a PM who can act as the primary liaison between stakeholders and development teams while also

facilitating agile ceremonies and maintaining delivery velocity; that is an accurate description of what I did there.

Embrace's roadmap interest in intelligent workflow automation, predictive analytics, and inspection intelligence aligns directly with my recent work. At the Federal Employment Agency I introduced Dagster for automated ETL and indicator generation on a live labour market analytics platform, and I have spent the last year building personal infrastructure for algorithmic market analysis using agentic loops, backtesting pipelines, and multi-source data integration. I understand the PM work behind AI-enabled products not as a marketing position but as a concrete set of data quality, model governance, and user-facing explainability problems that need to be solved in the backlog.

I am remote-based in Berlin, aligned to UK working hours as the role specifies, and available with four weeks' notice. I would welcome a conversation about where the product portfolio stands today and where the highest-leverage opportunities are.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into scalable enterprise software. Background spans AI data platforms, regulated analytics environments, B2B InsurTech SaaS, defence-grade data systems, and founder-level company building. Comfortable operating in ambiguity and high-pressure delivery where requirements are incomplete and teams need clarity to move. Fluent in agile ceremonies, backlog discipline, and cross-functional stakeholder alignment across engineering, QA, data science, and executive layers.

§ CORE STRENGTHS

- Decomposing strategic objectives into clear, dev-ready requirements
- Agile ceremony facilitation and sprint discipline recovery
- Cross-functional alignment across engineering, QA, data, and leadership
- AI-native product execution and intelligent workflow automation
- Delivery metrics tracking: velocity, release readiness, risk identification

- End-to-end feature ownership from user story to production rollout
 - Client trust rebuilding in prototype-stage and regulated environments
 - Technical fluency across modern SaaS infrastructure and data platforms
 - Founder-level pragmatism: low ego, high agency, bias toward shipping
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across a multinational programme
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year
- Enabled ML training and evaluation on curated multimodal datasets with transparent evaluation concepts covering SafeAI and ExplainableAI requirements
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and full audit trails with data provenance

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage indicators, flexible regional comparison, and modernised admin tooling on a live public platform
- Introduced Dagster for automated ETL and indicator generation, replacing manual processes and reducing data latency
- Standardised CI/CD with full test integration at build time; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Managed major system upgrades and database migrations with zero service interruption

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability across a B2B InsurTech platform; split a bloated 17-person team into smaller, structured Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices that had been lost under delivery pressure
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure across the engagement
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
- Integrated CGM interface into hospital information system workflows, navigating legacy API constraints and external database dependencies
- Built stakeholder trust through transparent communication of technical complexity under tight delivery deadlines

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Qcrypt AG, Product Owner (2016–2018):** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware. Owned backup, restore, checkpoint, and data-encryption product architecture. Also served as deputy IT security officer.
- **Kvitt Payment Solutions, Founder & CFO (2013–2018):** Group-based P2P payments platform. PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
- **Bundesdruckerei, Product Owner – COVID-19 Data Platform (2021):** RKI projects DIM and DESH. Secure data structures and identity management.

- **AOK Health Insurance ITSCare, Proxy Product Owner (2019–2020):** Migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies.
- **Enercon, Project Lead (2019):** Full IT modernisation of a specialist manufacturing site covering software, databases, hardware, communications, and Office 365 rollout.
