

Philipp Hilbert. *Product Owner, regulated software delivery.*

Positioning, hands-on Product Owner with ten years of backlog ownership, cross-functional alignment, and delivery in regulated, high-compliance environments.

§ WHY CLARIO

Clario sits at the intersection of regulated software, clinical evidence, and real patient impact – the kind of environment where precise requirements, audit-ready processes, and delivery discipline are not optional extras but the actual product. The job description's explicit reference to GxP-adjacent compliance, PI planning, and dependency management across distributed teams matches the operational model I have been working in for the past several years. The combination of SAFe-style delivery structure, cross-functional stakeholder complexity, and a mission rooted in evidence quality makes this role substantively different from commodity SaaS product work. *That is exactly the environment where precision and structured delivery compound into something meaningful.*

§ HONEST FRAMING

My direct experience in clinical trials and medical devices is limited – I have worked in regulated environments (Bundesdruckerei, defence, InsurTech), not in CRO or eClinical software specifically. What transfers directly is the underlying discipline: audit trails, data provenance, compliance workflows, change-controlled delivery, and stakeholder communication under regulatory scrutiny – all carried in production contexts.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, stakeholder communication and documentation
- **GitHub Copilot**, in-repo productivity and code review support
- **Cursor / VSCode**, spec-driven development sessions
- **Lovable**, rapid front-end prototyping
- **Gamma.app**, structured presentation and stakeholder artefacts
- **n8n**, workflow automation and agentic loop design
- **Framer**, design-heavy prototyping and UX validation

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, REST APIs, AngularJS, Ionic, CGM API integration, low-code insurance platforms.

§ SIDE PROJECT

BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Crypto market backtesting infrastructure built from the ground up.

- Ingests historical OHLCV and order-book data across centralised and decentralised venues.
- File-queue-based agent loop architecture, designed for reproducibility and modular strategy swaps.
- Integrated slippage modelling and execution-quality analytics grounded in real microstructure concepts.
- Demonstrates the same data provenance and audit-trail thinking that regulated delivery requires.

§ HOW I WOULD WORK AT CLARIO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow PI planning artefacts, existing team backlogs, and acceptance criteria standards to identify where requirements quality breaks down or dependencies are opaque.

WEEK 2

Tighten the backlog.

Run a structured refinement pass with the Agile team, sharpening user stories to testable acceptance criteria and surfacing sequencing conflicts early.

WEEK 3+

Close the loops.

Own sprint ceremonies end-to-end, unblock dependency chains with Engineering and other POs, and begin delivering measurable throughput improvement visible in velocity tracking.

I COVER LETTER

To the Clario hiring team,

I am applying for the Product Owner role at Clario. The combination of SAFe delivery structure, regulated environment, and a mission tied to clinical evidence quality is the kind of context where my specific strengths – structured requirements engineering, backlog ownership under pressure, and cross-functional alignment – produce their clearest return.

At Rohde & Schwarz, I served as Product Manager on a European defence programme (FCAS) building a central AI and data management platform for multimodal datasets. The environment had significant compliance and audit requirements: every transformation pipeline needed full data provenance, every dataset modification needed a traceable trail, and every acceptance criterion had to hold under multinational stakeholder scrutiny. I delivered autonomous feature sets end-to-end – user stories through acceptance testing through GitOps rollout – and unblocked infrastructure-level issues that had been stalled for over a year. The parallel to Clario's regulated delivery environment is direct.

At Emil Group, an InsurTech SaaS platform serving primary insurers and reinsurers, I inherited a delivery process in crisis. A 17-person team had lost sprint discipline, velocity tracking had

collapsed, and client trust was eroding. I split the team into functional Scrum units, reintroduced structured refinement and ownership models, and ran weekly product workshops to stabilise the client relationship. Within weeks, attrition dropped from near-total to a single departure and sprint predictability returned. I understand what backlog dysfunction costs and how to correct it without creating further disruption.

At the Federal Employment Agency, I operated as both Product Manager and deputy IT Security Officer on a public analytics platform. That dual role – delivery ownership alongside compliance governance – required me to hold the tension between moving fast on features and maintaining rigorous data lineage and governance standards. It is the same tension that exists in GxP-adjacent environments, and I am comfortable in it.

My gap relative to this role is direct clinical trial or eClinical software experience. What I bring instead is the structural discipline that makes regulated delivery work: audit-ready artefacts, change-controlled backlog management, and the stakeholder communication patterns that keep distributed teams aligned without losing execution speed. I am a fast domain learner, and the underlying mechanics of compliant software delivery are already well-established in my practice.

I would welcome a conversation about how the role is structured and where the biggest delivery challenges currently sit.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into production software. Background spans regulated environments, AI and data platforms, InsurTech, public-sector analytics, and founder-level company building. Comfortable holding delivery accountability when requirements are incomplete, priorities shift, and teams need clarity to move. Particular strength in backlog management, cross-functional alignment across engineering, QA, and compliance stakeholders, and structured requirements engineering that holds up under audit.

§ CORE STRENGTHS

- Backlog ownership and sprint discipline in regulated delivery environments

- User story creation, acceptance criteria, and requirements elicitation
 - Cross-functional alignment across Engineering, QA, UX, and compliance
 - Dependency identification and resolution across distributed teams
 - Data provenance, audit trails, and change-controlled delivery
 - Stakeholder communication and trust recovery under delivery pressure
 - PI planning participation and SAFe-compatible Agile delivery
 - AI-native product execution and rapid prototyping
 - Founder-level pragmatism: low ego, high agency, clear priorities
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Maintained full data provenance and audit trails across multimodal transformation pipelines (SafeAI, ExplainableAI)
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA under multinational stakeholder constraints
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been stalled with engineers for over a year
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Responsible for data transparency and auditability on a European defence programme (FCAS)

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage alongside full delivery ownership
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Migrated legacy systems to Kubernetes and managed major system upgrades

- Designed interactive dashboards and community features for regional labour market stakeholders

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Delivered a Claims Center module from concept to production rollout, including full requirements lifecycle
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned backlog and delivery for a mobile-first pilot app across iOS and Android in a healthcare setting
- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system (KIS) workflows, managing legacy API constraints
- Built stakeholder trust through transparent communication of technical complexity under tight deadlines

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner, Co-Founder

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Served as deputy IT security officer; defined attack vector mitigation and compliance posture
- Designed for zero technical knowledge required from end users; setup time under two minutes

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder, CFO

- Founded a group-based P2P payments product on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

BUNDESDRUCKEREI (COVID-19 DATA PLATFORM) 2021, 2021

Product Owner

- Delivered on RKI projects DIM and DESH; owned secure data structures and identity management in a high-compliance public-sector environment
