

# Philipp Hilbert. *Retail platform product manager who ships across the full stack.*

*Positioning*, ten years of SaaS PM experience across regulated, high-complexity platforms – now applied to Australian retail operations at scale.

## § WHY MAROPOST

Retail Express sits at exactly the intersection I find most interesting: a mature platform with real merchant scale, active modernisation pressure, and a broader unified commerce vision waiting to be connected. The job description calls out cloud migration, API enablement, and ecosystem expansion alongside POS and inventory – that combination of legacy stabilisation and forward architecture is the kind of problem I have navigated repeatedly, most recently at Rohde & Schwarz and the Federal Employment Agency. The explicit mention of Da Vinci AI and cross-cloud platform unification signals that Maropost is building something structurally ambitious, not just maintaining features. *That is exactly the environment where compound product thinking pays off.*

---

## § HONEST FRAMING

I have not held a role with the job title "retail PM," and my direct exposure to Australian retail-market specifics is limited. What I do bring is nearly a decade of operational-workflow translation in complex B2B SaaS environments – InsurTech, public-sector analytics, defence data platforms – where the underlying problem is always the same: retailers, insurers, and government agencies all have intricate back-office logic that software must faithfully model without oversimplifying.

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, requirements drafting and edge-case generation
- **GPT**, research synthesis and stakeholder communication drafts
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, code-level product validation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframe iteration
- **Gamma.app**, structured stakeholder presentations
- **n8n**, workflow automation and agentic loop design

---

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, Bitbucket, Git, Shopware, Ionic, CGM API integration, low-code insurance platform (Java/HTML).

---

## § SIDE PROJECT

BACKTEST ENGINE & DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

*Crypto-market backtest engine paired with a file-queue-based multi-agent orchestration framework built to ship trading logic autonomously.*

- Implements a strategy backtest loop over historical OHLCV data with configurable position sizing and risk parameters.
- Architecture uses a file-queue agent loop where discrete agents handle data ingestion, signal generation, and execution simulation independently.
- Active development across multiple repositories; framework also drives automated CV and application tooling.
- Demonstrates the systems-builder instinct relevant to Retail Express's platform modernisation: composable pipelines, clear interfaces, observable state.

---

## § HOW I WOULD WORK AT MAROPOST

*First weeks, concrete.*

### WEEK 1

#### **Listen, map, find the gaps.**

Spend the week in merchant interviews and support-ticket archaeology – mapping the highest-friction workflows across POS, inventory, and purchasing to identify where the platform's current state diverges most from how retailers actually operate.

### WEEK 2

#### **Slice and prioritise.**

Translate the workflow map into a rough opportunity stack ranked by customer impact and implementation feasibility, reviewed with engineering and design to surface any hidden technical debt blocking quick wins.

### WEEK 3+

#### **Ship, measure, close loops.**

Take ownership of the first backlog slice end-to-end – user stories, acceptance criteria, sprint participation, and post-launch adoption tracking – while beginning to sketch the longer-horizon roadmap for the modernisation areas the Director of Product needs sequenced.

---

## **I** COVER LETTER

Maropost is building something structurally rare: a unified commerce platform with real merchant scale and the organisational will to modernise while still shipping customer value. The Retail Express role sits at the centre of that – owning POS, inventory, payments, and integrations while contributing to the broader cloud and ecosystem strategy. That is not a maintenance role; it is a platform product role with compounding leverage, and it matches the type of work I have been doing for the past several years.

At Rohde & Schwarz I owned a data management platform for the European FCAS defence programme. The environment was technically complex, the stakeholder map was multinational, and delivery had stalled before I arrived. I rebuilt the discovery-to-delivery loop – user stories, acceptance criteria, GitOps rollout – and shipped a feature independently that a senior engineer had been blocked on for over a year. Deployment cycle time dropped from multiple days to under forty minutes. The discipline I applied there – operational workflow mapping, cross-

functional alignment, data provenance, and measurable release outcomes – applies directly to the Retail Express modernisation agenda.

At Emil Group I joined a prototype-stage InsurTech platform that had lost client confidence and sprint discipline simultaneously. I split a bloated seventeen-person team into focused Scrum units, reintroduced velocity tracking, and ran weekly product workshops with clients until trust was rebuilt. Senior developer attrition dropped to near zero. That experience is directly relevant to any PM role where the platform is mid-transformation and stakeholder confidence needs to be maintained in parallel with delivery velocity.

Earlier, at AOK Health Insurance (ITSCare), I led the migration of an internal procurement webshop to Shopware, including complex catalogue integration, API wiring, and configurable approval-policy workflows. That is the closest analogue I have to a retail operations context – and it gave me direct appreciation for how much operational nuance lives inside what looks like a simple storefront. I understand that POS and inventory software is really workflow software with a retail skin, and that is where good PM work lives.

I am based in Berlin, available within four weeks, and genuinely interested in what Maropost is building. I would welcome a conversation about the Retail Express roadmap and where my background fits best.

Best regards, *Philipp Hilbert*

---

## **II** CURRICULUM VITAE

---

### § BEARING

Product Manager and platform builder with nearly ten years of experience owning complex B2B SaaS products across regulated industries, operational analytics, and AI data systems. Consistent track record of restoring delivery discipline, translating intricate operational workflows into dev-ready requirements, and shipping end-to-end. Equally comfortable in discovery sessions with end-users and in sprint planning with engineering leads. Experience spans InsurTech, public-sector data platforms, defence AI systems, and earlier-stage healthcare and payments products. Brings technical fluency – Kubernetes, Python, ETL, REST APIs – without needing engineers to translate the platform.

---

### § CORE STRENGTHS

- Translating complex operational workflows into dev-ready requirements

- Platform modernisation: cloud migration, API enablement, GitOps delivery
  - Backlog management, sprint discipline, and delivery stability under pressure
  - Cross-functional alignment across engineering, design, QA, and business stakeholders
  - Data-driven KPI definition, adoption tracking, and product performance optimisation
  - Product discovery and customer insight in B2B operational software
  - Payments, e-commerce, and workflow integration product experience
  - AI-native execution: prototyping, LLM-assisted spec generation, agentic tooling
  - Founder-level pragmatism and commercial awareness in fast-moving environments
- 

## § PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

### *Product Manager, AI Data Transformation*

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout – directly relevant to Retail Express sprint ownership and release management
- Reduced deployment cycle time from several days to 20–40 minutes by introducing GitOps with ArgoCD; demonstrates the platform modernisation and cloud-migration capability Maropost is pursuing
- Unblocked a critical infrastructure feature independently that engineering had deferred for over a year, delivering it in one week
- Improved data quality and auditability through filtering, tagging, reproducible transformation pipelines, and full data provenance – analogous to inventory data integrity and reporting requirements in retail
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across a multinational stakeholder landscape

*Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift*

---

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

### *Product Manager, Public Data Analytics*

- Delivered new platform features including shortage analytics, flexible regional comparison, and modernised admin tooling – demonstrating full feature lifecycle ownership from requirements to release

- Introduced Dagster for automated ETL and indicator generation, reducing manual pipeline maintenance
- Migrated legacy systems to Kubernetes and managed major system upgrades under continuous availability requirements
- Standardised CI/CD with full test integration at build time, improving release confidence and velocity
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage

*Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket*

---

## EMIL GROUP 2022, 2022

### *Product Manager, InsurTech SaaS Platform*

- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform serving insurers, reinsurers, MGAs, and brokers – demonstrating domain capability in complex workflow software analogous to POS and inventory systems
- Re-established sprint discipline and delivery stability; split a bloated 17-person team into focused Scrum units with clear ownership and deputy structures
- Reintroduced velocity tracking and structured refinement practices, directly recovering predictable delivery cadence
- Regained client trust in a prototype-stage environment through structured weekly product workshops and transparent communication
- Reduced senior developer attrition from near-total to a single departure within one quarter

*Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs*

---

## CLINET PLATFORMS 2021, 2022

### *Product Owner, Mobile Healthcare App*

- Delivered core patient-facing flows for digital intake, meal and therapy plans, transport, chat, and document storage on iOS and Android under tight deadlines
- Integrated CGM interface into hospital information system workflows, requiring close API and data-mapping work with legacy systems – directly comparable to retail integrations and third-party connector work
- Built stakeholder trust through transparent communication of technical constraints across legacy APIs and external databases

*Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration*

---

## AOK HEALTH INSURANCE – ITSCARE 2019, 2020

### *Proxy Product Owner*

- Led migration of internal procurement webshop to Shopware, including complex product catalogue integration, API wiring, and configurable approval-policy workflows – the closest direct analogue to retail operations product work in the CV
  - Managed integration between internal systems and external supplier catalogue APIs, requiring careful requirements engineering and edge-case handling
- 

## QCRYPT AG 2016, 2018

### *Product Owner and Co-Founder*

- Owned product architecture for a quantum-secure encryption product including backup, restore, checkpoint, and data-encryption modules
  - Designed for non-technical end-users: setup time under two minutes, no technical knowledge required – strong signal of customer-centric product thinking
  - Served as deputy IT security officer
- 

## KVITT PAYMENT SOLUTIONS 2013, 2018

### *Founder and CFO*

- Built a group-based P2P payment product from concept through mobile prototype, including PSP integration and full UX/UI design
  - Product was later acquired and operated by Sparkasse
-
