

Philipp Hilbert. *Execution-first Product Manager for AI-driven enterprise platforms.*

Positioning, ten years translating complex operational workflows into engineering-ready software, now applying that to procurement intelligence and AI-native enterprise tooling.

§ WHY GREEN CABBAGE

Procurement intelligence is one of the few domains where the gap between raw data and operational value is still enormous, and where well-defined AI workflows can move the needle on real business outcomes rather than demo-ware. The job description calls out agentic capabilities and LLM-based workflow orchestration specifically, not as aspirational items but as immediate product territory, which is exactly the work I have been doing in production environments at Rohde & Schwarz and the Federal Employment Agency. Green Cabbage's Harvest platform sits at the intersection of governed intelligence and enterprise workflow, a combination I find technically interesting and commercially credible. *That is the kind of product surface where precise requirements discipline actually compounds into durable competitive advantage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, PRD structure, edge-case generation
- **GPT**, stakeholder communication drafts, discovery synthesis
- **GitHub Copilot**, in-repo work and spec validation
- **Cursor / VSCode**, code-level feature walkthroughs with engineering
- **Lovable**, rapid front-end prototyping

- **Framer**, design-heavy workflow mockups
- **n8n**, agentic workflow orchestration and automation pipelines
- **Gamma.app**, internal alignment decks and product briefs

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, Django, AngularJS, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, GitOps, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Docker, low-code platform configuration, CGM API integration, Shopware.

§ HOW I WOULD WORK AT GREEN CABBAGE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow client-facing and analytics teams, audit existing PRDs and workflow documentation in Harvest, and map where requirements hand-offs between product and engineering currently break down.

WEEK 2

Slice and sharpen.

Pick one live initiative, rewrite its acceptance criteria to engineering-ready standard, and run a structured refinement session with the engineering team to surface hidden assumptions before they cost a sprint.

WEEK 3+

Ship and close loops.

Own a full initiative from revised spec through delivery, establish a lightweight feedback loop from client-facing teams back into the backlog, and identify the highest-leverage AI workflow feature to define next.

Dear Green Cabbage team,

Procurement workflows carry enormous hidden complexity: approval chains, supplier data quality, contract version drift, and the gap between what buyers know and what the data actually says. I have spent the last several years working in analogous environments, specifically AI data management for European defence systems at Rohde & Schwarz and public labour-market analytics at the Federal Employment Agency, where the core challenge was the same as yours: take messy, high-stakes operational data and build software systems that make it actionable for non-technical users who need to trust what they see.

At Rohde & Schwarz I owned a central AI data platform as the sole Product Manager on a government contract, delivering end-to-end from user stories through GitOps rollout. I reduced deployment times from multiple days to under forty minutes by introducing ArgoCD-based automation, and I unblocked an infrastructure issue that had been outstanding for over a year by stepping in technically and delivering the feature myself in one week. That combination of tight requirements discipline and enough technical depth to remove blockers without waiting is precisely what your job description describes when it asks for someone who can "clarify requirements, refine scope, and remove ambiguity" alongside engineering teams.

At the Federal Employment Agency I owned an analytics platform serving regional labour market data to government and enterprise users. I introduced Dagster for automated ETL and indicator generation, designed interactive data dashboards and comparison tooling, and served as Deputy IT Security Officer with responsibility for compliance and data lineage. Building governed, auditable data pipelines for enterprise users with high trust requirements translates directly to procurement intelligence, where the credibility of the underlying data is a core part of the product value proposition.

On the AI side, I have worked hands-on with agentic workflow design using n8n and file-queue-based agent loops, LLM-assisted specification and edge-case generation using Claude and GPT, and rapid front-end prototyping in Lovable and Framer. I do not pitch AI features for novelty. My standard at Rohde & Schwarz was that every AI capability had to be grounded in measurable operational value and auditable data provenance before it reached a stakeholder demo, which matches Green Cabbage's stated standard of AI features being "grounded in measurable operational value and enterprise usability."

I am looking for a role where requirements discipline and AI-native execution are both valued, and where the product has real operational stakes for its users. Green Cabbage's Harvest platform is exactly that. I would welcome the opportunity to discuss the role in more detail.

Best regards, *Philipp Hilbert*

§ BEARING

Product Manager with nearly ten years of experience translating complex operational workflows into dev-ready requirements and scalable software systems. Background spans AI data platforms, analytics applications, B2B SaaS, regulated environments, and founder-level company building. Consistently operates at the intersection of product strategy, engineering collaboration, and AI-native execution. Comfortable owning initiatives end-to-end from discovery through GitOps rollout, with enough technical depth to remove blockers without escalating every ambiguity. Fluent in LLM-assisted development, agentic workflow design, and rapid prototyping.

§ CORE STRENGTHS

- Translating operational pain points into engineering-ready requirements
 - AI-native product execution and agentic workflow design
 - End-to-end initiative ownership from discovery through delivery
 - ETL pipeline and data platform product ownership
 - Cross-functional alignment across engineering, data science, and stakeholders
 - Sprint discipline, backlog management, and velocity recovery
 - Governed, auditable data systems for enterprise and regulated users
 - Technical depth sufficient to unblock infrastructure and implementation issues
 - Founder-level pragmatism, low ego, high agency
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked an infrastructure-level issue independently that had been outstanding for over a year; delivered the feature in one week as sole developer
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance

- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI)
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin features on the Arbeitsmarktmonitor platform
- Introduced Dagster for automated ETL and indicator generation across regional labour market datasets
- Designed interactive dashboards, tables, and community features for enterprise and government users
- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B SaaS platform
- Designed and delivered a Claims Center module from concept through production rollout
- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices, recovering delivery predictability
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops

- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core workflows for digital anamnesis, meal and therapy plans, transport, chat, and patient document management on iOS and Android
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity around legacy APIs and external databases

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for backup, restore, checkpoint, and data-encryption modules on a quantum-secure encryption product built on one-time-pad keys and true random number generator hardware
- Delivered setup flow requiring under two minutes with no technical knowledge required from the end user
- Served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Designed and prototyped a group-based P2P payment product on a P2P backbone, including PSP integration and full UX/UI design
- Mobile app prototype later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO & Project Lead

- Established full digital tooling, ERP introduction, financial and investment planning for a vertical indoor farming technology company
