

Philipp Hilbert. *Integration-fluent PM for complex SaaS ecosystems.*

Positioning, ten years owning technical product domains in B2B SaaS, now applying that depth to Uberall's 60+ partner integration platform.

§ WHY UBERALL

Uberall operates at the intersection of data quality, API ecosystem health, and real-world business impact at scale — a combination that demands the kind of technical PM who can read API documentation in the morning, run a client discovery session in the afternoon, and reprioritise the backlog before standup. The explicit call for AI-fluent product thinking applied to data mapping and matching accuracy signals that this is not a role looking for a feature-factory PM, but for someone who can reshape how a mature platform evolves. Building and maintaining 60+ integrations with partners like Google, Apple, and Facebook is exactly the complexity I have navigated in regulated, multi-stakeholder environments with real delivery pressure. *That is the kind of domain where careful systems thinking compounds over time, not after a single sprint.*

§ HONEST FRAMING

My direct experience is in AI data platforms, analytics infrastructure, and InsurTech SaaS — not location data or local listing ecosystems specifically. The transferable mechanic is identical: managing partner data contracts, API compliance, and data pipeline robustness in environments where inconsistency at the integration layer breaks business outcomes downstream.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, discovery synthesis
- **GPT**, stakeholder communication drafts and research summarisation
- **GitHub Copilot**, in-repo implementation support and code review
- **Cursor / VSCode**, assisted development and requirements validation
- **Lovable**, rapid front-end prototyping for concept tests
- **Gamma.app**, internal presentations and roadmap storytelling
- **n8n**, workflow automation and agentic process design
- **Framer**, design-heavy prototype work for user testing

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Dagster, dbt, DuckDB, Docker, GitOps, Redpanda, Django, AngularJS, Ionic, MicroStrategy, Bitbucket.

§ SIDE PROJECT

BACKTEST ENGINE & TRADING AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal crypto infrastructure project combining a backtesting engine, agentic execution loops, and market microstructure analysis.

- Builds a file-queue-based agent loop for autonomous trade signal evaluation and order routing.
- Architecture uses Python with modular strategy adapters, enabling repeatable backtests across CEX and DEX data sources.
- Integrates liquidation heatmap data from Coinglass and Hyblock Capital for execution quality analysis.
- Demonstrates the systems-thinking and data pipeline ownership directly transferable to Uberall's integration health monitoring.

§ HOW I WOULD WORK AT UBERALL

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Read every API contract and integration runbook in the Listings domain, sit in on engineering stand-ups and partner escalation threads, and map where the integration health dashboard has blind spots against what engineers actually worry about.

WEEK 2

Triage and sequence.

Walk the backlog end to end with the engineering lead, tag each item against partner-compliance risk, adoption impact, or technical debt, and produce a first-draft priority stack I can defend with data.

WEEK 3+

Ship, close loops.

Drive the first release cycle to completion, from refined user stories through to rollout and metric check, establishing the cadence of discovery, delivery, and retrospective that the team will run on.

I COVER LETTER

Dear Uberall hiring team,

I am applying for the Product Manager, Listings role because the domain matches the exact shape of work I have spent the last three years doing: owning complex technical integrations in B2B SaaS environments where data quality is not cosmetic but operationally critical, and where a broken API contract has direct consequences for paying customers.

At Rohde & Schwarz, I owned a central AI data management platform built on multimodal pipelines under a European defence programme. The core challenge was identical to what Uberall faces at a different scale: ensuring data entering the system from multiple external sources was clean, traceable, and compliant with contractually defined standards – and then maintaining that integrity as partner requirements evolved. I delivered this end-to-end, from writing user stories through to GitOps rollout using ArgoCD, while working across architect, data science, backend, frontend, and QA functions. At the Federal Employment Agency, I served

as Deputy IT Security Officer while simultaneously owning the data transformation and indicator generation pipeline for a public-facing analytics platform, introducing Dagster for automated ETL and managing system-level Kubernetes upgrades without external support.

The 60+ integrations Uberall manages are, at their core, a distributed data quality problem with a partner relations layer on top. What breaks that system is usually not the happy path – it is the edge cases that emerge when a platform partner changes a field requirement quietly, or when a customer's data does not conform to what the integration expects. I am comfortable diving into API documentation, reproducing failures in a test environment, and translating what I find into a clear engineering brief. At Emil Group, I did this under significant delivery pressure: the team was mid-crisis when I arrived, and I stabilised delivery by restructuring a bloated seventeen-person team into focused Scrum units, reintroducing velocity tracking, and running weekly product workshops that rebuilt client trust enough to prevent a contract termination.

On AI fluency: I use Claude, GPT, and GitHub Copilot daily – not for optics but because they materially reduce the time between a discovery finding and a dev-ready spec. I am also actively building a personal crypto infrastructure project involving agent-driven execution loops and data pipeline design, which keeps my systems instincts sharp outside working hours. The AI-enhanced data mapping and matching accuracy ideas called out in the job description are exactly the kind of problems I would want to tackle once I understand the current integration architecture well enough to improve it responsibly.

I would bring ten years of hands-on technical product ownership, a track record of stabilising delivery in high-complexity SaaS environments, and genuine interest in the problem Uberall is solving. I am available on four weeks' notice and happy to meet at whatever stage makes sense.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience owning technical product domains in B2B SaaS and regulated platform environments. Specialises in translating complex operational workflows and API-level integration requirements into dev-ready roadmaps with measurable delivery outcomes. Has owned data pipeline platforms, multi-stakeholder integration ecosystems, and cross-functional Scrum teams under real delivery pressure. AI-native in daily workflow. Comfortable holding technical depth with engineers while communicating clearly with non-technical stakeholders and enterprise clients.

§ CORE STRENGTHS

- API integration strategy and partner data compliance
 - End-to-end product lifecycle ownership in mature SaaS platforms
 - Data pipeline design and ETL product ownership
 - Backlog management, sprint discipline, and velocity recovery
 - Customer discovery and concept testing with enterprise clients
 - Cross-functional alignment across engineering, QA, data science, and compliance
 - AI-native workflow and AI-enhanced feature design
 - KPI-driven prioritisation and stakeholder reporting
 - Technical fluency across REST APIs, Python, Kubernetes, and GitOps tooling
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets under the European FCAS defence programme, with full integration and data quality accountability
- Delivered end-to-end feature sets including user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Improved data quality through filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level OpenShift issues independently, delivering in one week a feature that had been outstanding from engineers for over a year
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Owned the Arbeitsmarktmonitor analytics platform covering regional labour market and demographic data, including partner data standards and indicator pipelines
- Introduced Dagster for automated ETL and indicator generation, replacing manual processes
- Designed interactive dashboards, regional comparison tooling, and modernised admin interfaces

- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product delivery for a B2B InsurTech SaaS platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters across policy issuance, pricing, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline by restructuring a bloated 17-person team into focused Scrum units with ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first hospital pilot app across iOS and Android, covering digital anamnesis, therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows via legacy API
- Built stakeholder trust through transparent communication of technical complexity across legacy APIs and external database constraints

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Responsible for backup, restore, checkpoint, and data-encryption product design
- Served as deputy IT security officer; led external presentations and product demonstrations in English

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Co-founded a group-based P2P payment platform on a P2P backbone, later acquired and operated by Sparkasse
- Owned PSP integration, full UX/UI design, and mobile app prototype end-to-end

AOK HEALTH INSURANCE / ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex product catalogue and API integration with customisable approval policies
