

Philipp Hilbert. *Hands-on PM who ships, discovers, and builds with AI.*

Positioning, B2B SaaS product operator with ten years of discovery-to-delivery experience, ready to partner with Usersnap's CEO on roadmap and customer insight.

§ WHY USERSNAP

Usersnap sits at an interesting inflection point: the product already serves Microsoft, Canva, and Instacart, yet the job description reads like a founding PM brief – customer advisory boards to build, strategic assumptions to pressure-test, AI capabilities to ship with intention rather than hype. That combination of established customer base and genuine greenfield work is rare. The explicit framing – "PM partner, not project manager" – signals a CEO who wants judgment and push-back, not execution theatre. The specific mandate to "keep costs low for customers and create a genuine technical moat" through AI is exactly the kind of constraint-driven product thinking I find interesting. *That is precisely where being AI-native and cost-conscious compounds into something defensible.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis and spec generation
- **GPT**, research, edge-case generation, draft refinement
- **GitHub Copilot**, in-repo feature support
- **Cursor / VSCode**, LLM-assisted development workflows
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy prototype work
- **Gamma.app**, crisp stakeholder decks without bloat

- **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, Django, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, GitOps pipelines, AngularJS, Ionic, Shopware, Bitbucket, Git.

§ SIDE PROJECT

CRYPTO DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Self-built agentic infrastructure for algorithmic crypto market analysis and trading automation.

- Implements a file-queue-based multi-agent loop for market data ingestion, signal generation, and order execution across centralized and decentralized venues.
 - Architecture uses n8n for orchestration, Python for execution logic, and integrates with DEX aggregators including Jupiter and 1inch alongside perpetual venues.
 - Includes a backtesting engine and tooling for liquidation heatmap analysis drawing on Coinglass and Hyblock Capital data.
 - Demonstrates the same cost-conscious, AI-with-intention build philosophy Usersnap is looking for in its product AI capabilities.
-

§ HOW I WOULD WORK AT USERSNAP

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview existing customers and customer success colleagues to map the current feedback loop – where insights enter, where they get lost – before touching the roadmap or the advisory board structure.

WEEK 2

Structure the signal.

Synthesise interview findings into a prioritised problem map and align with the CEO on which strategic assumptions most urgently need a real customer conversation to validate or kill.

WEEK 3+

Ship, close loops.

Launch the first advisory board cohort with a clear operating rhythm, deliver one scoped discovery-to-roadmap recommendation with full reasoning written up, and begin tracking the metrics that will tell us whether we got it right.

I COVER LETTER

Usersnap's job description names something that is actually rare in B2B SaaS: a PM role where the mandate is discovery and judgment, not coordination. The explicit call-out – "PM partner, not project manager" – and the focus on building a customer advisory board from scratch are signals that the company wants someone who treats customer conversations as the primary data source, not a quarterly ritual. That framing matches how I have operated across the last ten years.

At Rohde & Schwarz I was embedded in a European defence programme where the user base was multinational and the data was sensitive. The core of the role was translating ambiguous, high-stakes requirements into a working AI data platform – prioritising ruthlessly, writing tight acceptance criteria, and delivering features end-to-end rather than handing them off. At the Federal Employment Agency I owned the Arbeitsmarktmonitor, a public analytics platform, and introduced structured ETL pipelines that let the team generate new product insights without depending on ad-hoc engineering time. At Emil Group I joined a failing delivery situation, split a seventeen-person team into workable Scrum units, reintroduced velocity tracking, and rebuilt client trust through weekly product workshops – in a prototype-stage environment with shifting priorities and senior engineers leaving. These are different domains, but the underlying mechanic is the same: listen to what is actually broken, structure it, prioritise with explicit reasoning, and ship.

On AI product capabilities specifically: I build with AI daily, across prototyping tools, LLM-assisted spec work, and agentic automation. My mental model for AI features in a SaaS product is cost and capability together – an AI feature that impresses in a demo but adds \$0.40 per interaction to the unit economics is a liability, not a moat. Usersnap's explicit call-out of cost efficiency as a constraint resonates. I would bring the same lens to evaluating and scoping AI-powered features on the Usersnap roadmap.

The customer advisory board mandate is one I would approach as a discovery asset rather than an NPS exercise. The goal is a standing panel of ICP customers with whom we can run assumption tests, prototype reactions, and strategic conversations on a cadence – not a once-a-year showcase. I have run structured customer workshops at Emil Group and at Rohde & Schwarz; the advisory board is an extension of that discipline at the product-strategy level.

I am available for a first conversation at short notice and happy to walk through any of the above in more detail.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager with close to ten years of experience across B2B SaaS, government analytics platforms, AI data systems, and regulated environments. Strongest in discovery under ambiguity, structured prioritisation, and end-to-end delivery ownership. Fluent in AI-native workflows and comfortable working directly with engineering on implementation, not just handoff. Operates with low ego and high agency in small, high-trust teams where individual judgment moves the product forward.

§ CORE STRENGTHS

- Customer discovery and structured synthesis of qualitative findings
- AI product intuition: cost-aware feature design, not capability-first
- Roadmap prioritisation with explicit, communicable reasoning
- End-to-end delivery ownership from user story to GitOps rollout
- Cross-functional alignment across engineering, design, and customer success
- Sharp written communication: 1-pagers, concise stakeholder updates
- Data platform fluency: ETL pipelines, analytics tooling, lineage
- Workshop facilitation and client trust rebuilding in ambiguous environments
- Founder-level pragmatism, comfortable with incomplete playbooks

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end including user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout – the same discovery-to-shipped discipline Usersnap is looking for
- Built a central AI and data management platform for multimodal datasets under government contract; kept data provenance and auditability as hard constraints, not afterthoughts
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues independently; delivered a feature the project lead had been requesting from engineers for over a year, completed in one week
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Owned the Arbeitsmarktmonitor analytics platform; delivered labour shortage analytics, flexible regional comparison tools, and modernised admin tooling grounded in user need
- Introduced Dagster for automated ETL and indicator generation, enabling the team to surface new product insights without bespoke engineering requests
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage – treating privacy as a constraint, not an afterthought
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Rebuilt delivery stability in a failing product org: split a bloated seventeen-person team into smaller Scrum units, reintroduced velocity tracking and structured refinement, reduced senior developer attrition from near-total to a single departure
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust in a prototype-stage environment through structured weekly product workshops – the same customer-facing discipline required for Usersnap's advisory board mandate
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows for digital anamnesis, meal and therapy plans, transport, chat, and document storage under tight deadlines
 - Led a small team with strict prioritisation focus on highest-leverage features only
 - Built stakeholder trust through transparent communication of technical complexity around legacy APIs and external database integrations
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for a non-technical target user: setup under two minutes, no technical knowledge required – the same user-empathy lens relevant to Usersnap's ICP

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payment product on a P2P backbone; owned PSP integration, UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE / ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and configurable approval policies
-
