

Philipp Hilbert. *Hands-on PM who ships, discovers, and builds with AI.*

Positioning, B2B SaaS product operator with ten years of discovery-to-delivery experience, ready to partner with Usersnap's CEO on roadmap and customer insight.

Usersnap's job description names something that is actually rare in B2B SaaS: a PM role where the mandate is discovery and judgment, not coordination. The explicit call-out – "PM partner, not project manager" – and the focus on building a customer advisory board from scratch are signals that the company wants someone who treats customer conversations as the primary data source, not a quarterly ritual. That framing matches how I have operated across the last ten years.

At Rohde & Schwarz I was embedded in a European defence programme where the user base was multinational and the data was sensitive. The core of the role was translating ambiguous, high-stakes requirements into a working AI data platform – prioritising ruthlessly, writing tight acceptance criteria, and delivering features end-to-end rather than handing them off. At the Federal Employment Agency I owned the Arbeitsmarktmonitor, a public analytics platform, and introduced structured ETL pipelines that let the team generate new product insights without depending on ad-hoc engineering time. At Emil Group I joined a failing delivery situation, split a seventeen-person team into workable Scrum units, reintroduced velocity tracking, and rebuilt client trust through weekly product workshops – in a prototype-stage environment with shifting priorities and senior engineers leaving. These are different domains, but the underlying mechanic is the same: listen to what is actually broken, structure it, prioritise with explicit reasoning, and ship.

On AI product capabilities specifically: I build with AI daily, across prototyping tools, LLM-assisted spec work, and agentic automation. My mental model for AI features in a SaaS product is cost and capability together – an AI feature that impresses in a demo but adds \$0.40 per interaction to the unit economics is a liability, not a moat. Usersnap's explicit call-out of cost efficiency as a constraint resonates. I would bring the same lens to evaluating and scoping AI-powered features on the Usersnap roadmap.

The customer advisory board mandate is one I would approach as a discovery asset rather than an NPS exercise. The goal is a standing panel of ICP customers with whom we can run assumption tests, prototype reactions, and strategic conversations on a cadence – not a once-a-year showcase. I have run structured customer workshops at Emil Group and at Rohde & Schwarz; the advisory board is an extension of that discipline at the product-strategy level.

I am available for a first conversation at short notice and happy to walk through any of the above in more detail.

Best regards, *Philipp Hilbert*
