Dear Volkswagen Digital:Hub team,

I am applying for the Product Owner role at Volkswagen Digital:Hub in Spain. The description matches the kind of work I do best: sitting at the intersection of business intent and engineering delivery, maintaining a healthy backlog, and keeping a distributed team aligned on a shared vision – all without losing sight of the data that tells you whether you are actually moving in the right direction.

In my most recent role at Rohde & Schwarz, I owned a central AI and data management platform inside the FCAS European defence programme. The challenge was not the technology; it was translating ambiguous requirements from multinational stakeholders into clear, actionable user stories and then unblocking the team when infrastructure complexity threatened delivery. I reduced deployment times from several days to under forty minutes by introducing GitOps with ArgoCD – not because I was the engineer, but because I understood the problem well enough to make the case and then support the implementation. That is the kind of bridge work I understand this role to require.

At Emil Group, an InsurTech SaaS platform, I inherited a situation that will be familiar to many product teams: a bloated sprint, low trust from clients, and rising attrition on the engineering side. I split a seventeen-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt client trust through weekly product workshops. By the time I left, senior developer attrition had dropped to a single departure. I mention this because the job description specifically calls for someone who can model agile working and create a strong feedback culture – that is not a soft aspiration for me; it is something I have had to rebuild under pressure.

On the stakeholder side, I am comfortable presenting to both technical and non-technical audiences. I have a spoken English sample on YouTube from my time at Qcrypt AG, where I was also deputy IT security officer and product owner of a quantum-secure encryption product that required no technical knowledge from the end user. Keeping complex product logic accessible is something I take seriously.

I am a German national, currently based in Berlin, and open to the fully remote setup you describe. My notice period is four weeks. I would welcome a conversation about how I can contribute to the Volkswagen Digital:Hub team.

Best regards, *Philipp Hilbert*
