

Philipp Hilbert. *Proxy Product Owner, public-sector data orchestration.*

Positioning, hands-on PM with a decade bridging complex operational workflows, integration architectures, and cross-functional stakeholder alignment in regulated environments.

§ WHY THIS PROJECT

The posting describes exactly the kind of heterogeneous system landscape I find most productive to work in: multiple input channels, legacy specialist applications acting as router and adapter systems, metadata consistency across processing steps, and a target architecture that must be derived analytically rather than handed down from above. The specific mention of eAntrag-style service applications as distribution nodes between SPoC and back-end systems signals a well-scoped but genuinely complex integration problem. I have mapped and documented landscapes of comparable complexity at Rohde & Schwarz (multimodal FCAS data platform) and at the Federal Employment Agency (regional labour market analytics with a patchwork of legacy ETL and reporting systems). *That kind of structured ambiguity is where I do my clearest thinking.*

§ HONEST FRAMING

I have not held a role with the title "Proxy Product Owner" inside a German public-sector authority before, though I did hold a Proxy PO function at AOK ITSCare and delivered a COVID-19 data platform for Bundesdruckerei in a public-sector context. The formal Behördenumfeld with its procurement rhythms and governance layers is familiar to me from those engagements, but I have not operated inside a Behörde as a long-term embedded resource.

The transferable mechanic I rely on is systematic stakeholder mapping and written artefact quality: clear Fachkonzepte, consistent terminology, and documented decisions that survive personnel changes.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and stakeholder document review
 - **GPT**, freeform analysis and edge-case generation for acceptance criteria
 - **GitHub Copilot**, specification support and inline code review
 - **Cursor/VSCode**, repository navigation and implementation support
 - **Gamma.app**, fast concept decks for stakeholder alignment sessions
 - **n8n**, workflow and orchestration prototyping
 - **Lovable**, rapid front-end prototyping for concept validation
 - **Framer**, design-heavy wireframing and interactive mock-ups
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, PostgreSQL, MongoDB, Kotlin (Spring Boot), Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, REST APIs, AngularJS, Ionic, CGM API integration, Shopware, Java, Git, GitOps workflows.

§ SIDE PROJECT

BACKTEST ENGINE & DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal infrastructure project combining a crypto backtesting engine with a file-queue-based autonomous agent loop.

- Implements a backtesting engine for algorithmic crypto trading strategies across CEX and DEX data sources.
- Applies a file-queue-based multi-agent orchestration pattern for autonomous task execution, directly analogous to routing and processing pipeline design.
- Demonstrates hands-on Python data engineering, PostgreSQL persistence, and structured pipeline thinking outside a corporate context.

- The orchestration architecture mirrors the routing and classification logic asked for in this posting, making it directly relevant to target-architecture design discussions.
-

§ HOW I WOULD WORK AT THIS PROJECT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Conduct structured interviews with technical and domain stakeholders to produce an initial inventory of existing Fachdienste, data input channels, routing steps, and known gaps – formatted as a living artefact the whole team can annotate.

WEEK 2

Prioritise, slice, validate.

Run the inventory against the Product Owner's target image to derive a prioritised gap list; validate assumptions in one focused workshop session before any Backlog item is written.

WEEK 3+

Write, align, unblock.

Produce refined Fachkonzept sections and dev-ready user stories for the highest-priority routing and metadata topics, hold standing alignment with technical architects and domain experts, and close open decisions before they become blockers.

I COVER LETTER

Dear HR Solutions GmbH,

I am applying for the Proxy Product Owner engagement for your public-sector client. The project brief describes a challenge I recognise from prior work: a heterogeneous system landscape in which structured and unstructured data arrive through multiple channels, legacy specialist applications act as routing and adapter layers, and no single coherent target architecture has yet been fully derived or documented. My role at Rohde & Schwarz on the FCAS AI data management platform involved precisely this combination – multimodal data ingestion, classification and transformation pipelines, metadata consistency across processing stages, and continuous alignment with multinational technical and domain stakeholders. I am comfortable in that environment and productive in it.

My experience as a Proxy PO at AOK ITSCare, where I managed the migration of an internal webshop to Shopware while navigating complex catalogue and API integration and customisable approval workflows, gave me a direct feel for what it means to represent the Product Owner's intent in operational day-to-day work without losing the strategic thread. At the Federal Employment Agency I served additionally as Deputy IT Security Officer, which reinforced my habit of treating governance and auditability not as overhead but as design constraints that improve a product's long-term maintainability. Both experiences taught me that in regulated and public-sector contexts the quality of written artefacts – Fachkonzepte, decision logs, interface definitions – determines whether work survives team changes and procurement cycles.

On the architectural side, the posting's focus on routing and orchestration approaches, metadata governance, and the derivation of a Soll-Fachkonzept aligns closely with work I have done in practice. At the Federal Employment Agency I introduced Dagster for automated ETL and indicator generation, standardised data lineage, and migrated legacy systems to Kubernetes. At Rohde & Schwarz I reduced deployment times from several days to under forty minutes by introducing GitOps with ArgoCD, and I unblocked OpenShift-level infrastructure issues independently that had been pending with the engineering team for over a year. I mention these not to position myself as a developer, but to illustrate that I can hold a substantive conversation with architects and engineers about feasibility without needing translation.

The engagement runs through year-end with an extension option – a structure I am comfortable with. I am available from mid-July, can commit full-time, and am set up for predominantly remote work with the on-site availability described. I would be glad to discuss the details of the client context, the current maturity of the existing architecture documentation, and where I could contribute earliest value.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with close to ten years translating complex operational workflows into scalable software systems across regulated, public-sector, and enterprise environments. Background spans AI data platforms, public-sector analytics infrastructure, InsurTech SaaS, and mobile healthcare – consistently operating where requirements are incomplete, system landscapes are heterogeneous, and written artefact quality determines delivery continuity. Comfortable as the sole bridge between domain stakeholders and engineering teams. Fluent in integration architectures, metadata governance, ETL pipeline

design, and GitOps-based delivery. Low ego, high agency, strong written output in German and English.

§ CORE STRENGTHS

- Fachkonzept authoring and structured requirements engineering in complex system landscapes
 - Routing, orchestration, and integration architecture analysis
 - Proxy PO and PO representation with full Backlog ownership
 - ETL pipeline design and metadata governance across heterogeneous systems
 - Cross-functional stakeholder alignment, technical and non-technical
 - Sprint discipline, Backlog management, and velocity recovery
 - Deputy IT security officer experience, governance and compliance awareness
 - Deployment and infrastructure fluency: Kubernetes, GitOps, ArgoCD, OpenShift
 - Regulated and public-sector environment delivery
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets (image, audio, tabular) within the European defence programme FCAS, with direct responsibility for data classification, transformation pipelines, metadata consistency, and audit trails.
- Defined routing and orchestration logic for data flows across processing stages, including SafeAI and ExplainableAI evaluation concepts – directly analogous to the Soll-Fachkonzept work described in this posting.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps; unblocked OpenShift infrastructure issues independently, delivering in one week what engineers had not progressed in over a year.
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA with multinational stakeholder alignment.

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform for regional labour market and demographic data, directly interfacing with public-sector governance and compliance requirements.
- Introduced Dagster for automated ETL and indicator generation; standardised data lineage and CI/CD with full test integration – establishing the kind of consistent metadata and processing transparency this posting requires.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage across all processing steps.
- Migrated legacy systems to Kubernetes and managed major system upgrades without service interruption.
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling in a heterogeneous legacy environment.

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Represented the product function across a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, and brokers, with end-to-end ownership of Backlog prioritisation and sprint delivery.
- Designed and delivered a Claims Center module from concept to production rollout; delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation.
- Re-established sprint discipline after structural delivery failure: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and regained client trust through weekly product workshops.
- Reduced senior developer attrition from near-total to a single departure through clear ownership structures.

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned Backlog and delivery for a mobile-first pilot app for hospitals (iOS and Android), including digital anamnesis, meal and therapy plans, transport, chat, and patient document storage.

- Integrated CGM interface into hospital information system (KIS) workflows, navigating legacy API constraints and external database dependencies.
- Built stakeholder trust through transparent written communication of technical complexity in a regulated healthcare context.

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; designed backup, restore/checkpoint, and data-encryption modules.
- Served as deputy IT security officer; defined attack vector mitigation and security governance for an early-stage regulated product.

PROXY PRODUCT OWNER – AOK HEALTH INSURANCE ITSCARE 2019, 2020

Proxy Product Owner

- Represented the PO in day-to-day delivery for the migration of an internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies in a public-sector adjacent environment.

BUNDESDRUCKEREI – COVID-19 DATA PLATFORM 2021, 2021

Product Owner

- Delivered RKI projects DIM and DESH: secure data structures and identity management in a high-visibility public-sector context with strict governance requirements.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Co-founded a group-based P2P payment solution; owned PSP integration, full UX/UI design, and mobile app prototype. Later acquired and operated by Sparkasse.
