Sehr geehrte Damen und Herren,

Etengo reached out about a Senior Product Owner role for a consumer-goods client scaling its connected professional-device platform across multiple interdisciplinary Scrum teams. I am writing because the brief matches my background with unusual precision.

At Emil Group I inherited a single bloated 17-person team, two frustrated clients, and a sprint cadence that had collapsed under delivery pressure. Within weeks I split the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, ran weekly product workshops, and reduced senior developer attrition from near-total to a single departure. The situation described in the posting – professionalising Discovery and Delivery processes, stabilising team structures, establishing clear PO roles across multiple teams – is the same problem I solved there.

At Rohde & Schwarz I owned a data management platform for the European defence programme FCAS, working in exactly the Microservices, Spring Boot, and Kubernetes environment your client uses. I delivered features end-to-end: from writing user stories and acceptance criteria through implementation support and testing to GitOps-based rollout via ArgoCD. I reduced deployment times from several days to 20–40 minutes. I also unblocked infrastructure-level issues in OpenShift independently when the development team was stuck, which gave me credibility with engineers that made backlog conversations substantially more efficient.

At the Federal Employment Agency I managed an analytics platform migration to Kubernetes while serving concurrently as Deputy IT Security Officer, which required close coordination with external partners and compliance stakeholders – the same partner-integration challenge your client is trying to systematise. My communication style is structured and direct in both German and English; I have given external product presentations in both languages, including an English-language product launch for Qcrypt AG's quantum-encryption hardware.

For this engagement I would bring: a working Scrum practice I can stand up quickly, experience aligning POs across teams on release dependencies, and technical fluency sufficient to challenge estimates, read architecture diagrams, and spot integration risks before they become sprint failures. I am available from August 2026, comfortable working predominantly remote, and ready to discuss scope in a brief call.

Best regards, *Philipp Hilbert*
