

Philipp Hilbert. *B2B SaaS Product Manager for complex operational workflows.*

Positioning, ten years owning product end-to-end in regulated, multi-stakeholder environments – built for the complexity of workforce scheduling software.

§ WHY SHYFTPLAN

shyftplan is solving a genuinely hard category problem: real-time workforce allocation in industrial environments where constraints are dense, shift rules are non-trivial, and a missed update has immediate operational consequences. The job description explicitly calls out dynamic adaptation to absences in real-time – that is exactly the class of problem I find most interesting, because it sits at the intersection of operational workflow modelling and product delivery discipline. Reporting directly to the CEO means product decisions stay close to strategic context, not buried in middle management. *That is the kind of accountability that makes product work meaningful.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, discovery synthesis and stakeholder write-ups
- **GitHub Copilot**, in-repo development support
- **Cursor / VSCode**, LLM-assisted implementation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframing and concept validation
- **Gamma.app**, structured deck and roadmap communication

- **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, Ionic, Git, Bitbucket, GitOps pipelines.

§ SIDE PROJECT

BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Algorithmic trading infrastructure built from scratch as a solo technical founder.

- Implements a full backtest loop for crypto trading strategies against historical market data.
 - Built on a file-queue-based agent architecture with Python and structured data pipelines.
 - Developed alongside a custom multi-agent orchestration framework and live trading bot integrations.
 - Demonstrates the same end-to-end technical ownership expected of a PM who needs to write precise acceptance criteria for engineering-heavy features.
-

§ HOW I WOULD WORK AT SHYFTPLAN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow customer success and sales calls, read every available support ticket and usage report, and map the current product area end-to-end – understanding where the real scheduling constraints live before forming any opinions.

WEEK 2

Validate, then sharpen.

Run structured discovery sessions with two or three key account contacts to pressure-test the gap map, and identify the single most valuable unresolved pain point in the product area.

WEEK 3+

Ship, close loops.

Draft the first sprint goals with the engineering team, establish acceptance criteria and a definition of done, and begin the cadence of structured refinements and retrospectives that keep velocity predictable.

I COVER LETTER

Dear shyftplan team,

Workforce planning in manufacturing environments is operationally dense in a way that most B2B SaaS products are not. Shift constraints, skill matrices, real-time absence handling, and regulatory requirements around working hours all interact simultaneously. I have spent ten years as a Product Manager and Product Owner turning exactly that kind of operational complexity into dev-ready requirements, and I would like to bring that experience to your product team.

At Emil Group I owned an InsurTech SaaS platform serving primary insurers, reinsurers, and MGAs – a domain with similarly interlocking rules, stakeholder hierarchies, and compliance constraints. I delivered a Claims Center module from concept to production, rebuilt sprint discipline after a period of delivery instability, and regained client trust through structured weekly product workshops. The operational complexity of insurance product configuration maps closely onto the scheduling domain: rules are dense, exceptions are frequent, and correctness is not negotiable. At Rohde and Schwarz I served as the sole PM on a defence-grade AI data platform under FCAS, where I delivered autonomous feature sets end-to-end – from user stories through acceptance criteria, implementation support, and GitOps-based rollout – within a cross-functional team of architects, data scientists, and engineers.

What stands out about shyftplan is the specificity of the problem. Dynamic adaptation to real-time absences is not a generic scheduling feature; it requires a product model that accounts for qualification requirements, shift coverage minimums, and notification flows simultaneously. I have mapped workflows of comparable complexity at the Federal Employment Agency, where I owned a labour market analytics platform and served as Deputy IT Security Officer, and at CLINET Platforms, where I built mobile-first patient management flows integrated with hospital information systems and legacy APIs. In both cases the critical skill was the same: translating ambiguous operational reality into precise, testable product definitions before a single sprint began.

I am a native German speaker with C2 English, based in Berlin, and available within four weeks. I am comfortable with Jira-based sprint ownership, enterprise account feedback cycles, and the direct CEO reporting structure you describe. I am not looking for a role with low accountability

– I am looking for one where the product decisions I make have measurable consequences for real industrial customers.

I would welcome the opportunity to discuss how my background maps onto the specific product area you are hiring for.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into scalable B2B SaaS systems. Background spans InsurTech platform delivery, public-sector analytics, AI data management in regulated environments, and founder-level company building. Experienced in full product ownership from discovery through sprint execution, enterprise client communication, and cross-functional team alignment.

Operates effectively under ambiguity and delivery pressure, and brings AI-native tooling fluency into every stage of the product lifecycle.

§ CORE STRENGTHS

- End-to-end product ownership in B2B SaaS environments
- Translating complex operational rules into dev-ready requirements
- Sprint planning, backlog management, and velocity discipline
- Enterprise stakeholder communication and client trust building
- Cross-functional alignment across engineering, design, QA, and sales
- Quantitative and qualitative product discovery
- AI-native workflow execution and rapid prototyping
- Technical fluency sufficient for independent infrastructure debugging
- Founder-level pragmatism: low ego, high agency, strong delivery accountability

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers
- Re-established sprint discipline by splitting a bloated 17-person team into smaller Scrum units and introducing ownership and deputy concepts
- Regained enterprise client trust through structured communication and weekly product workshops in a prototype-stage environment
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Reintroduced velocity tracking and structured refinement practices; reduced senior developer attrition from near-total to a single departure

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end including user stories, acceptance criteria, implementation, testing, and GitOps-based rollout on a defence-grade AI data platform (FCAS)
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked an OpenShift infrastructure issue independently and delivered in one week a feature that had been pending from the engineering team for over a year
- Owned data transformation, transparency, and auditability requirements including SafeAI and ExplainableAI concepts

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features for the Arbeitsmarktmonitor analytics platform including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, replacing manual pipeline work
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time
- Designed interactive dashboards, community features, and structured data tables for regional labour market data

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on a mobile-first hospital pilot app
- Integrated CGM interface into hospital information system workflows, navigating legacy APIs and external databases
- Built stakeholder trust through transparent communication of technical complexity under tight delivery deadlines

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Co-Founder, CDO – Smart Soil Technologies (2021):** Digital tooling, financial and investment planning for an agri-tech vertical farming startup.
- **Product Owner – COVID-19 Data Platform, Bundesdruckerei (2021):** RKI projects DIM and DESH; secure data structures and identity management.
- **Proxy Product Owner – AOK ITSCare (2019–2020):** Migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policies.
- **Product Owner – Qcrypt AG (2016–2018):** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; also served as deputy IT security officer.
- **Founder – Kvitt Payment Solutions (2013–2018):** Group-based P2P payments; PSP integration, full UX/UI design, mobile app prototype; later acquired and operated by Sparkasse.
