

Philipp Hilbert. *Product Owner for data-driven wealth management.*

Positioning, B2B SaaS product owner with ten years shipping regulated, analytics-heavy platforms – ready to own discovery-to-delivery at wealthpilot.

§ WHY WEALTHPILOT

wealthpilot sits at a genuinely hard intersection: wealth management domain complexity, regulated data, and the challenge of making professional-grade tooling feel effortless to advisors. The job description calls out something specific that I find compelling: identifying where GenAI creates real value inside a wealth product – AI-assisted reporting, automated analytics, advisory support – and being clear-eyed about where it does not. That distinction requires both product judgment and domain sobriety, not just LLM enthusiasm. The 12-month contract scope is also a concrete challenge: deliver measurable outcomes in a defined window, not open-ended roadmap sprawl. *That is exactly the kind of focused mandate where my delivery track record is sharpest.*

§ HONEST FRAMING

I have not worked directly inside a wealth management or asset advisory product before. My regulated-domain experience runs through InsurTech, public-sector analytics, and a defence AI programme rather than private banking or portfolio management. The transferable mechanic is strong: structured discovery in data-heavy, compliance-sensitive environments, translating advisor and end-user workflows into backlogged, outcome-oriented delivery – the same discipline applies whether the underlying domain is labour market indicators or client portfolios.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis, story drafting, edge-case generation
- **GPT**, research, spec review, stakeholder communication prep
- **GitHub Copilot**, in-repo assistance during implementation support
- **Cursor / VSCode**, LLM-assisted development and acceptance-criteria validation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-review and concept mockups
- **Gamma.app**, stakeholder presentations and roadmap communication
- **n8n**, agentic workflow automation and discovery pipeline tooling

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Kotlin (Spring Boot), Redpanda, REST APIs, Ionic, AngularJS, MicroStrategy, Docker, GitOps pipelines, CGM API integration, Shopware.

§ SIDE PROJECT

BACKTEST ENGINE & TRADING INFRASTRUCTURE [GITHUB.COM/HILBERTP](https://github.com/HilbertP)

→

Crypto market backtesting and algorithmic decision framework built from scratch.

- Builds and validates trading strategies against historical order-book and price data across centralised and decentralised venues.
- Combines Python-based data pipelines with execution logic targeting Hyperliquid perpetuals, Jupiter DEX routing, and cross-chain bridge flows via Across Protocol.
- Draws on liquidation heatmap analysis using Coinglass and Hyblock Capital to inform strategy risk parameters.
- Directly relevant for wealthpilot: demonstrates comfort with financial data infrastructure, analytics product thinking, and the discipline of separating signal from noise – the same judgment required when evaluating AI features for a wealth SaaS platform.

§ HOW I WOULD WORK AT WEALTHPILOT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow advisor sessions and review existing user research to map where the current product creates friction, and align with UX and engineering on which backlog items are blocked by unclear requirements versus genuine complexity.

WEEK 2

Slice, prioritise, align.

Run a focused backlog refinement with the team, applying outcome-over-feature framing to the top ten items, and surface two or three quick wins that can move a meaningful product KPI within the first sprint.

WEEK 3+

Ship, measure, iterate.

Drive the first outcome-focused sprint to completion, instrument the relevant KPIs, and establish a lightweight but consistent discovery cadence – regular user touchpoints feeding directly into backlog prioritisation.

I COVER LETTER

Dear wealthpilot team,

I am applying for the Product Owner role because it combines two things I find genuinely interesting: the structural complexity of wealth management workflows and the practical question of where AI creates durable value inside a regulated SaaS product rather than just adding noise.

My background is ten years of B2B SaaS product ownership across regulated and data-intensive environments. At the Federal Employment Agency I owned the Arbeitsmarktmonitor, an analytics platform for regional labour market data, where I drove new analytics modules, modernised infrastructure, and served as Deputy IT Security Officer – all while keeping delivery stable. At Rohde & Schwarz I built a central AI data management platform for a European defence programme, which required exactly the kind of AI feature judgment your posting describes: understanding what AI auditing, provenance, and transparency concepts mean in

practice, not just in theory. At Emil Group I inherited a struggling InsurTech platform with a 17-person team that had lost sprint discipline and client trust, split it into functional Scrum units, reintroduced velocity tracking, and ran weekly product workshops until delivery became predictable again.

Your posting is specific about wanting someone who can distinguish AI hype from real product utility. I find that refreshing. In my current work I use Claude, GPT, and Cursor daily for discovery synthesis, story drafting, and edge-case generation – these are genuine workflow accelerators. At the same time, my experience at Rohde & Schwarz taught me that AI features in regulated products carry compliance, data lineage, and explainability requirements that can easily dwarf the feature value itself. Evaluating an AI-assisted report or advisory assistant at wealthpilot would require the same structured benefit-vs-regulatory-cost analysis I applied on the FCAS programme.

I do not have a prior role inside a wealth management product, and I want to name that directly. What I bring instead is rapid domain absorption combined with structured discovery: I build a working model of a new domain through user interviews, workflow mapping, and stakeholder alignment before writing a single story. Your users are professional advisors with complex, habitual workflows. Getting that mental model right quickly is a skill I have exercised across InsurTech, public-sector analytics, healthcare, and defence – the domain always changes, the discipline does not.

The 12-month contract scope suits how I work. I am not a roadmap-builder who needs a long runway to show results; I am an operator who closes loops. I would welcome a conversation about how I can contribute to wealthpilot's product goals within that window.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with ten years of experience in B2B SaaS, regulated platforms, and data-heavy systems. Proven delivery track across InsurTech, public analytics, defence AI, and healthcare – environments where discovery is ongoing, compliance is non-negotiable, and backlog clarity directly determines team velocity. Fluent in AI-native workflows and comfortable evaluating where LLM-based features create genuine product value versus overhead. Operates with founder-level pragmatism: low ego, high ownership, and a strong instinct for the shortest path to a measurable outcome.

§ CORE STRENGTHS

- Outcome-oriented backlog ownership in regulated SaaS environments
- User discovery and structured requirements engineering under ambiguity
- AI feature evaluation: real value vs. compliance cost vs. hype
- Cross-functional alignment across UX, engineering, data science, and compliance
- Sprint discipline recovery and team restructuring under delivery pressure
- Data-driven prioritisation and KPI-oriented product thinking
- Rapid domain absorption through structured user and stakeholder interviews
- AI-native workflow execution: discovery, story drafting, prototyping
- Founder pragmatism: operates without hand-holding, closes loops

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned AI feature evaluation and data-platform product decisions for a European defence programme (FCAS), applying benefit-vs-compliance analysis to each capability
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Drove data quality, provenance, and audit trail requirements across multimodal datasets, applying SafeAI and ExplainableAI transparency concepts
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned the Arbeitsmarktmonitor analytics platform: delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin modules
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual pipelines
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage

- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered a Claims Center module from concept to production on a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters
- Restructured a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and recovered delivery predictability
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Shipped core patient-facing flows for digital anamnesis, meal and therapy plans, transport coordination, chat, and document storage on iOS and Android
- Integrated CGM interface into hospital information system workflows, managing complex legacy API constraints transparently with stakeholders
- Delivered under tight deadlines with a small team by maintaining strict focus on highest-leverage features

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner, Co-Founder

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Positioned and communicated the product in English to international audiences; served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder, CFO

- Founded a group-based P2P payments product on a P2P backbone; owned PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Project Lead

- Established digital tooling, financial planning, and investor relations for an agri-tech startup; introduced ERP and full digital infrastructure
