

Philipp Hilbert. *Product Owner for data-driven wealth management.*

Positioning, B2B SaaS product owner with ten years shipping regulated, analytics-heavy platforms – ready to own discovery-to-delivery at wealthpilot.

Dear wealthpilot team,

I am applying for the Product Owner role because it combines two things I find genuinely interesting: the structural complexity of wealth management workflows and the practical question of where AI creates durable value inside a regulated SaaS product rather than just adding noise.

My background is ten years of B2B SaaS product ownership across regulated and data-intensive environments. At the Federal Employment Agency I owned the Arbeitsmarktmotor, an analytics platform for regional labour market data, where I drove new analytics modules, modernised infrastructure, and served as Deputy IT Security Officer – all while keeping delivery stable. At Rohde & Schwarz I built a central AI data management platform for a European defence programme, which required exactly the kind of AI feature judgment your posting describes: understanding what AI auditing, provenance, and transparency concepts mean in practice, not just in theory. At Emil Group I inherited a struggling InsurTech platform with a 17-person team that had lost sprint discipline and client trust, split it into functional Scrum units, reintroduced velocity tracking, and ran weekly product workshops until delivery became predictable again.

Your posting is specific about wanting someone who can distinguish AI hype from real product utility. I find that refreshing. In my current work I use Claude, GPT, and Cursor daily for discovery synthesis, story drafting, and edge-case generation – these are genuine workflow accelerators. At the same time, my experience at Rohde & Schwarz taught me that AI features in regulated products carry compliance, data lineage, and explainability requirements that can easily dwarf the feature value itself. Evaluating an AI-assisted report or advisory assistant at wealthpilot would require the same structured benefit-vs-regulatory-cost analysis I applied on the FCAS programme.

I do not have a prior role inside a wealth management product, and I want to name that directly. What I bring instead is rapid domain absorption combined with structured discovery: I build a

working model of a new domain through user interviews, workflow mapping, and stakeholder alignment before writing a single story. Your users are professional advisors with complex, habitual workflows. Getting that mental model right quickly is a skill I have exercised across InsurTech, public-sector analytics, healthcare, and defence – the domain always changes, the discipline does not.

The 12-month contract scope suits how I work. I am not a roadmap-builder who needs a long runway to show results; I am an operator who closes loops. I would welcome a conversation about how I can contribute to wealthpilot's product goals within that window.

Best regards, *Philipp Hilbert*
