

Philipp Hilbert. *B2B product operator for early-stage mobility.*

Positioning, hands-on PM with founder instincts, six years of B2B SaaS delivery, and a logistics background ready to own Avocargo's B2B product from zero to traction.

§ WHY AVOCARGO

AVO Mobility is doing something genuinely hard: displacing cars not by lecturing people about sustainability, but by making the alternative more practical and more fun. The specific signal in your posting that resonates is the expectation that this person is the main point of contact for pilot customers – that is a founder-mode responsibility, not a feature-factory one. Avocargo is at the stage where product decisions and customer relationships are the same thing, which is exactly where I have worked best. *That is the environment where careful listening and fast iteration compound into real traction.*

§ HONEST FRAMING

I have not shipped a consumer-facing mobility or cargobike product. My domain experience in logistics comes from my master's specialisation at TU Berlin and from supply-chain-adjacent product work, not from running a bike-sharing fleet. The transferable mechanic I am strong in is mapping complex operational workflows – multi-stakeholder, non-obvious edge cases, legacy constraints – into dev-ready requirements that teams can actually execute on.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis and spec generation
 - **GPT**, research, edge-case generation, user story drafting
 - **GitHub Copilot**, in-repo development support
 - **Cursor / VSCode**, code-level product work
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframing
 - **Gamma.app**, stakeholder presentations
 - **n8n**, workflow and automation design
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Dagster, dbt, DuckDB, Jenkins, Bitbucket, REST APIs, Ionic, CGM API integration, Shopware, Low-code insurance platforms, OpenShift, Helm, Docker, Redpanda, MicroStrategy.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal research framework for systematic strategy validation across centralised and decentralised venues.

- Ingests trade history and market microstructure data from multiple exchanges to run reproducible strategy backtests.
- Built on a file-queue-based agent loop with Python at the core, separating data ingestion, signal generation, and execution simulation.
- Actively developed alongside live trading across Hyperliquid, Bitget, Jupiter, and 1inch.
- Demonstrates the same systems-thinking and build-to-learn instinct that Avocargo needs in a PM who will build B2B product infrastructure from scratch.

§ HOW I WOULD WORK AT AVOCARGO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Ride with and shadow the operations team, sit in on every pilot customer touchpoint, and document the current B2B user journey end-to-end – from first booking to invoice – identifying where the product breaks and where the workarounds live.

WEEK 2

Validate, slice, prioritise.

Run structured interviews with the two or three pilot B2B customers to separate real blockers from surface complaints, then translate findings into a ranked opportunity backlog with clear acceptance criteria.

WEEK 3+

Ship, close, iterate.

Deliver the first slice of the B2B product that removes the top-ranked friction point, close the feedback loop with pilot customers directly, and establish a lightweight sprint rhythm that keeps engineering and operations moving in the same direction.

I COVER LETTER

Dear AVO Mobility team,

I am applying for the Senior Business Owner / Product Manager B2B role at Avocargo. The posting is honest about what it actually needs: someone who can map customer segments, define requirements, stay in direct contact with pilot customers, and move fast enough to matter at this stage of the company. That is a founder-mode job inside a product frame, and it is exactly the kind of role I have done best.

At Emil Group I joined an InsurTech B2B SaaS platform at the prototype stage – a 17-person team without sprint discipline, pilot customers losing confidence, and senior engineers leaving. Within weeks I had restructured the team into focused Scrum units, reintroduced velocity tracking, and was running weekly product workshops directly with the clients. I did not just manage the backlog; I was the main interface between what customers were telling us and what the team was building. By the time I left, attrition had stopped and the product was shipping

reliably again. The mechanics of that situation – an early-stage B2B product, a small scrappy team, pilot customers who need to trust you before they scale – map closely to what Avocargo is doing now.

At CLINET Platforms I built a mobile-first hospital app from scratch with a small team under tight deadlines. The core skill there was the same: understand the operational reality the users actually live in, cut the backlog ruthlessly to the highest-leverage features, and communicate technical constraints to non-technical stakeholders without losing their trust. The cargobike B2B context is different but the shape of the problem is familiar: delivery businesses have real operational pressure, limited tolerance for friction, and zero patience for software that does not fit their workflows.

My academic background is in Industrial Engineering at TU Berlin, with a first master's-phase specialisation in logistics – supply chain, operations, and transport systems. It is not cargobike-specific, but it means I will not need to be taught the vocabulary of last-mile delivery, fleet operations, or route economics. That context matters when you are mapping B2B customer segments and writing requirements that reflect how the businesses actually work.

I work AI-native: Claude and GPT for discovery synthesis and spec generation, Lovable and Framer for rapid prototyping, n8n for workflow design. I write enough code to unblock myself and to have credible conversations with developers. At Rohde and Schwarz I delivered a feature in one week that engineers had been asked to build for over a year – not because I am faster than engineers, but because I understood both the requirement and the implementation path well enough to close the gap myself.

I would be glad to talk through how I would approach the B2B segment mapping and the first pilot customer cycle. Thank you for reading.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager with nearly ten years of experience building B2B software products in early-stage and regulated environments. Background spans InsurTech SaaS platforms, public-sector analytics, AI data management, and founder-level company building. Comfortable operating where requirements are incomplete and priorities shift, with a track record of rebuilding delivery stability, owning pilot customer relationships directly, and translating

complex operational workflows into requirements teams can execute on. Academic foundation in logistics and industrial engineering from TU Berlin.

§ CORE STRENGTHS

- B2B product ownership from zero to pilot customer traction
 - Mapping operational workflows into dev-ready requirements
 - Direct pilot customer management and trust rebuilding
 - Cross-functional alignment across engineering, design, and operations
 - Agile team restructuring and sprint discipline recovery
 - Product discovery in ambiguous, fast-moving environments
 - AI-native execution and rapid prototyping
 - Logistics and supply-chain domain literacy
 - Founder-level pragmatism, low ego, high agency
-

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Acted as main point of contact for pilot customers in a prototype-stage B2B environment, running weekly product workshops to rebuild trust and align delivery
- Restructured a bloated 17-person team into focused Scrum units with clear ownership and deputy concepts
- Delivered the Claims Center module from concept to production rollout
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature requested from engineers for over a year

- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Managed data transformation, transparency, and auditability with multinational stakeholders

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics and flexible regional comparison tooling
- Introduced Dagster for automated ETL and indicator generation
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, Kubernetes, Jenkins

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Built a mobile-first pilot app for hospitals on iOS and Android from scratch with a small team under tight deadlines
- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Built stakeholder trust through transparent communication of technical constraints involving legacy APIs and external databases

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

AOK HEALTH INSURANCE – ITSCARE (VIA PROJUNCTA) 2019, 2020

Proxy Product Owner

- Migrated internal B2B webshop to Shopware, including complex catalogue and API integration and configurable approval policies

Tech: Shopware, REST APIs

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for backup, restore/checkpoint, and quantum-secure data encryption (OTP / true-RNG hardware)
- Designed for setup under two minutes with no technical knowledge required; served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO & Head of HR (various stages)

- Established digital tooling, financial and investment planning, and ERP introduction for an agri-tech startup
