

Philipp Hilbert. *Senior Product Owner for digital mobility and membership services.*

Positioning, ten years of hands-on Product Ownership across regulated B2B platforms, mobile apps, and cross-functional teams – brought to bear on ADAC's digital member journey.

§ WHY ADAC

ADAC's digital product portfolio spans a breadth that few organisations can match: roadside assistance, travel, health, insurance, and loyalty – all converging into a single member experience across app, mobile web, and wallet. The job description calls out hypothesis-driven thinking and AI as a daily companion, which matches how I have worked for years rather than something I am adjusting to. The cross-departmental scope – coordinating between Pannenhilfe, Mobility, Versicherungen, and Loyalty – mirrors the multi-stakeholder environments where I have consistently re-established sprint discipline and delivery clarity.

That is exactly the complexity where structured product ownership creates the most leverage.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec generation, edge-case analysis, PRD drafting
- **GPT**, stakeholder communication drafts, research synthesis
- **GitHub Copilot**, in-sprint implementation support
- **Cursor / VSCode**, LLM-assisted code review and feature delivery
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy flow mockups

- **Gamma.app**, structured presentation of product decisions
 - **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, Ionic, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, CGM API integration, Shopware.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal algorithmic trading and backtesting framework built on real market data.

- Ingests and normalises OHLCV data from centralised and decentralised venues including Hyperliquid and Bitget for strategy evaluation.
 - Built on a file-queue-based agent loop pattern, enabling modular strategy components without a heavyweight orchestration layer.
 - Draws on practical analysis of liquidation heatmaps (Coinglass, Hyblock Capital), execution quality, slippage, and market microstructure.
 - Demonstrates the same hypothesis-driven, experiment-iterate-measure loop the ADAC posting explicitly calls for in product development.
-

§ HOW I WOULD WORK AT ADAC

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing squads, read through the current backlog and open epics, and identify the three highest-friction points in the Self-Service or Mobility journey as concrete starting hypotheses.

WEEK 2

Sharpen the backlog.

Work through the top epics with the team to ensure each has clear acceptance criteria, a defined user journey step, and an agreed definition of ready before sprint planning.

WEEK 3 +

Ship, close loops.

Lead the first full sprint cycle with proper velocity tracking in place, deliver at least one user-facing improvement to the app or mobile web, and establish a recurring stakeholder touchpoint cadence with the relevant Fachabteilungen.

I COVER LETTER

Dear ADAC Hiring Team,

I am applying for the Senior Product Owner role for Digital Mobile Products. With nearly ten years of hands-on Product Ownership across regulated SaaS platforms, mobile apps, and multi-stakeholder environments, I am confident I can contribute immediately to the digital member experience ADAC is building.

The role description resonates directly with work I have done. At Emil Group, I owned a B2B InsurTech platform serving primary insurers, reinsurers, and brokers – a domain as cross-functional and stakeholder-dense as the one described here. After arriving into a delivery environment where sprint discipline had broken down and client trust was eroding, I restructured a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops that directly rebuilt stakeholder confidence. That experience maps well onto the coordination demands between Pannenhilfe, Mobility, Versicherungen, Loyalty, and the other Fachabteilungen named in your posting. At CLINET Platforms, I delivered a mobile-first patient app across iOS and Android – managing backlog, team, and external API constraints simultaneously under a tight timeline.

The requirement for AI affinity is one I take seriously as a working practice rather than a credential. I use large language models daily for spec drafting, edge-case generation, stakeholder communication preparation, and rapid prototyping. I have built agentic workflow automation with n8n and use tools like Lovable and Framer to compress the gap between product idea and testable prototype. This lets me move from hypothesis to validated feature faster than a waterfall-oriented approach allows, which fits directly with the iterative, hypothesis-driven product culture described in the posting.

My technical fluency allows me to work at the interface of product and engineering without creating bottlenecks. At Rohde and Schwarz, I unblocked an infrastructure-level issue in OpenShift independently – delivering in one week what a senior engineer had been unable to complete in months. At the Bundesagentur für Arbeit, I served as Deputy IT Security Officer while simultaneously managing a Kubernetes migration and a new Dagster-based ETL pipeline. I am not a developer, but I understand the systems well enough to write precise requirements, catch integration risks early, and reduce back-and-forth in refinement.

I am a German native speaker and operate at C2 level in English – switching between the two mid-meeting is standard for me. I am open to relocating to Munich, and I am available within four weeks of an offer. I would welcome the opportunity to speak in more detail about how my background maps onto ADAC's current product priorities.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Owner with nearly ten years of experience delivering mobile apps, SaaS platforms, and cross-functional digital products in regulated environments. Background spans InsurTech, public-sector analytics, defence AI, and mobile healthcare – all environments where stakeholder complexity, shifting priorities, and delivery pressure are the norm. Comfortable owning the full product lifecycle from backlog definition through sprint execution to stakeholder communication. AI-native in daily practice: uses LLM tooling, rapid prototyping, and agentic automation as standard instruments rather than occasional experiments. German native, English C2, open to Munich relocation.

§ CORE STRENGTHS

- Agile product ownership across mobile app and SaaS environments
- Backlog management: epics, features, user stories, sprint discipline
- Cross-departmental stakeholder alignment and trust-building
- Hypothesis-driven discovery and experiment-iterate-measure cycles
- AI as daily working tool: drafting, prototyping, automation
- Structured requirements engineering from ambiguous operational inputs

- Delivery recovery: restoring cadence in stalled or fragmented teams
 - Mobile-first product delivery (iOS, Android, mobile web, wallet-adjacent)
 - Technical fluency across modern web, data, and infrastructure stacks
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across a multinational government programme
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been outstanding for over a year
- Improved data quality through filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling on the Arbeitsmarktmonitor platform
- Designed interactive dashboards, tables, and community features (groups, networks, events)
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters
- Re-established sprint discipline: split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices; regained client trust through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows under tight deadlines
- Built stakeholder trust through transparent communication of technical complexity (legacy APIs, external databases)
- Led a small team with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- Delivered RKI projects DIM and DESH: secure data structures and identity management under public health urgency
-

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies

- Coordinated between business stakeholders and technical team across a regulated healthcare environment
-

ENERCON 2019, 2019

Project Lead, IT Modernisation

- Full IT modernisation of a specialist manufacturing site: software, databases, hardware, communications, end devices, Office 365, SSO
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for backup, restore/checkpoint, and data-encryption based on one-time-pad keys and true random number generator hardware
- USP: setup under two minutes, no technical knowledge required; served as deputy IT security officer alongside product role
- English-language product promotion: youtube.com/watch?v=nt06f71lgfE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone: PSP integration, full UX/UI design, mobile app prototype
- Later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO & Head of HR (successive roles)

- Intelligent self-regulation fertiliser and substrate solutions for vertical indoor farming
 - Established all digital tooling, financial planning, investor relations, and ERP introduction
-
