

Philipp Hilbert. *Patient-centric platform builder for regulated health-tech.*

Positioning, nearly ten years translating complex operational workflows into scalable software – now directed at simplifying cannabis therapy access for thousands of patients.

§ WHY BLOOMWELL

Bloomwell sits at the intersection of regulated healthcare, telemedical infrastructure, and rapid consumer-scale growth – a combination that demands a Product Owner who can hold the clinical workflow rigour of a KIS integration and the speed of a consumer app launch in the same head at the same time. The posting specifically calls out telemedizin and pharmacy platforms as the core product surface, which maps directly to the mobile healthcare app I built for hospitals at CLINET Platforms and the B2B SaaS insurance platform I shaped at Emil Group. Building a product that connects tens of thousands of patients, physicians, and pharmacies in a lightly charted regulatory environment is exactly the kind of problem worth spending serious time on. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, stakeholder document synthesis and user story elaboration
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, LLM-assisted development environment
- **Lovable**, rapid front-end prototyping

- **Framer**, design-heavy concept mockups
 - **Gamma.app**, structured stakeholder presentations
 - **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin with Spring Boot, Python, Django, PostgreSQL, MongoDB, JavaScript, AngularJS, Ionic, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, Jenkins, GitOps pipelines, dbt, Dagster, DuckDB, Redpanda, OpenShift, CGM API integration, Shopware, low-code insurance platforms, MicroStrategy.

§ SIDE PROJECT

BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A custom algorithmic backtesting and trading-bot framework built for crypto market analysis.

- Ingests tick and OHLCV data from centralised and decentralised venues including Hyperliquid and Bitget.
 - File-queue-based agent loop architecture; separate ingestion, signal, and execution layers.
 - Integrates liquidation heatmap data from Coinglass and Hyblock Capital for market microstructure analysis.
 - Demonstrates the same infrastructure-level systems thinking relevant to data pipelines on a telemedical platform.
-

§ HOW I WOULD WORK AT BLOOMWELL

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing telemedizine and pharmacy platform workflows end-to-end – from patient onboarding and physician consult to eRezept issuance and pharmacy fulfilment – and document every handoff, pain point, and assumption in the current backlog.

WEEK 2

Slice and validate.

Take the three highest-friction workflow gaps identified in week one, write user stories with explicit acceptance criteria, and walk them past engineering and one clinical stakeholder to surface feasibility and edge-case risk before any sprint commitment.

WEEK 3+

Ship and close loops.

Own a first sprint delivery, run the retrospective, establish a lightweight velocity baseline, and introduce structured refinement so the backlog reflects real priority rather than whoever spoke loudest last.

I COVER LETTER

Dear Bloomwell team,

I am applying for the Product Owner role because the problem you are solving – making evidence-based cannabis therapy accessible at scale through a digital, patient-centred platform – is one I find genuinely worth the effort. The combination of regulatory complexity, multi-sided marketplace dynamics (patients, physicians, pharmacies, wholesale), and the technical depth required to make eRezept and telemedical workflows actually work in production is not a problem that tolerates shallow product management. It suits someone who can sit comfortably in both a clinical workflow conversation and a sprint refinement session with backend engineers.

My most directly relevant experience is at CLINET Platforms, where I built a mobile-first pilot app for hospitals: digital anamnesis, therapy and meal plans, patient document storage, and a full CGM interface integration into hospital information system workflows. The challenge there was not only technical – it was translating highly regulated, paper-heavy clinical processes into a mobile UX that felt lightweight to patients while remaining auditable to clinicians. The structural problem is analogous to what Bloomwell faces: getting a regulated healthcare flow to feel as frictionless as a consumer app. At Emil Group I rebuilt sprint discipline in a 17-person team that had lost delivery velocity under scope pressure, split it into focused Scrum units, introduced ownership concepts, and regained client trust through structured product workshops. Stable delivery rhythm in a fast-moving environment is something I have had to rebuild from scratch, not just maintain.

On the requirements side, I have spent years converting ambiguous stakeholder input – government ministries, insurance carriers, defence programme stakeholders, hospital administration – into dev-ready user stories with acceptance criteria that engineering can

actually build against. I understand that the gap between what a stakeholder describes and what a developer implements is where most product quality is lost, and I take structured requirements engineering seriously as a core discipline rather than a formality.

I bring working technical fluency across the stack your platform likely runs on: REST APIs, Kubernetes, Python backends, and CI/CD pipelines. This means I can have a real conversation with your engineering team about what a proposed feature costs to implement, where the integration risk sits in a pharmacy API connection, or why a proposed data structure will create a compliance problem downstream. That technical grounding reduces back-and-forth and helps the team move faster.

I would welcome the opportunity to discuss the role in more detail. I am based in Berlin, comfortable working remote, and available to start within four weeks of an offer.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience delivering digital products in regulated environments: healthcare, defence, insurance, and public-sector analytics. Strongest in translating complex operational workflows into structured, dev-ready requirements and then staying in the room to see delivery through. Experienced in multi-sided platforms, cross-functional agile teams, and stakeholder alignment across clinical, technical, and business audiences. Equally comfortable running a refinement session with backend engineers and presenting a product roadmap to C-level stakeholders. AI-native operator with practical fluency across modern prototyping and development tooling.

§ CORE STRENGTHS

- Workflow mapping and structured requirements engineering for regulated systems
- Backlog ownership and sprint discipline in cross-functional agile teams
- Clinical and healthcare domain integration (KIS, CGM, eRezept-adjacent flows)
- Multi-sided platform thinking: patients, clinicians, partners
- Stakeholder alignment across technical, clinical, and business functions
- AI-native rapid prototyping and LLM-assisted spec generation

- Delivery ownership end-to-end: user stories through GitOps rollout
 - Team restructuring and velocity recovery under delivery pressure
 - Technical fluency across backend, API integration, and cloud-native infrastructure
-

§ PROFESSIONAL EXPERIENCE

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient flows: digital anamnesis, therapy and meal plans, transport coordination, chat, and patient document storage across iOS and Android.
- Integrated CGM interface into hospital information system (KIS) workflows, navigating legacy API constraints and external database dependencies.
- Built stakeholder trust through transparent communication of technical complexity across clinical and IT stakeholders.
- Led a small cross-functional team under tight deadlines with strict focus on highest-leverage features.

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B SaaS platform.
- Designed and delivered a Claims Center module from concept to production rollout.
- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts.
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops.
- Reduced senior developer attrition from near-total to a single departure.

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets within the European FCAS defence programme.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.

- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Led a cross-functional team: architect, data scientists, backend and frontend engineers, QA.

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform: labour shortage analytics, flexible regional comparison, modernised admin tooling.
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage.
- Standardised CI/CD with full test integration at build time.

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex product catalogue and API integration.
- Designed customisable approval policies for a regulated procurement environment.

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- RKI projects DIM and DESH: secure data structures and identity management for national health reporting infrastructure.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for quantum-secure encryption based on one-time-pad keys and true random number generator hardware.
- Designed for sub-two-minute setup with no technical knowledge required from the end user.

- Served as deputy IT security officer; responsible for attack vector framing and security product positioning.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone; owned PSP integration and full UX/UI design from concept to mobile prototype.
- Product later acquired and operated by Sparkasse.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Head of HR (successive roles)

- Full establishment of digital tooling, financial planning, ERP introduction, and investor relations across the company's lifecycle.
