## § WHY DELIVERY HERO

Delivery Hero operates fraud and trust problems at a scale most companies never reach: 65 countries, millions of daily transactions, wildly varied market conditions. The job description is explicit that this role must balance fraud resilience against user experience and marketplace economics simultaneously – that three-way tension is exactly the kind of structured ambiguity I have navigated across insurance, public-sector analytics, and defence-grade AI platforms. The combination of ML-driven detection, global rollout, and market localisation is genuinely non-trivial, and it sits at the intersection of the systems and delivery disciplines I have spent a decade building. *That is the problem space where surface-level PM skills get found out fast, and deep operational fluency compounds.*

---

## § HONEST FRAMING

I do not have a direct fraud or anti-fraud product title in my CV. What I do carry is adjacent and transferable: I have owned security-sensitive product surfaces (quantum-resistant encryption at Qcrypt, Deputy IT Security Officer at the Federal Employment Agency), payment flow architecture (Kvitt Payment Solutions, PSP integration), and data provenance and audit-trail systems used in regulated, high-stakes environments. The core mechanic – building trust surfaces on top of probabilistic systems while protecting legitimate users – maps directly.

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, spec generation, edge-case analysis, async reasoning
  - **GPT**, research synthesis, first-draft PRDs
  - **GitHub Copilot**, in-repo feature acceleration
  - **Cursor / VSCode**, code-level investigation and rapid iteration
  - **Lovable**, front-end prototype generation
  - **Framer**, design-heavy flow validation
  - **n8n**, agentic workflow automation
  - **Gamma.app**, stakeholder presentations at speed
- 

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Dagster, dbt, DuckDB, Jenkins, Redpanda, MicroStrategy, AngularJS, Ionic, Docker, GitOps pipelines, CGM API integration, Shopware.

---

## § SIDE PROJECT

BACKTEST ENGINE & TRADING BOT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP)

→

*Crypto market research infrastructure built to test and execute systematic trading strategies across centralised and decentralised venues.*

- Ingests liquidation heatmap data from Coinglass and Hyblock Capital alongside OHLCV feeds to model order-flow and market-structure signals.
- Built on a file-queue-based agent loop architecture using n8n orchestration and Python execution layers, deliberately decoupled for independent module testing.
- Connects live to Hyperliquid perpetual DEX and CEX venues including Bitget for execution; integrates cross-chain bridging via Across Protocol.
- Demonstrates the same data pipeline design thinking – provenance, reproducibility, audit trails – that the anti-fraud ML stack requires for feature engineering and model validation.

---

## § HOW I WOULD WORK AT DELIVERY HERO

*First weeks, concrete.*

### WEEK 1

#### **Listen, map, find the gaps.**

Shadow the existing fraud detection workflows, pull the current KPI dashboards, and interview the market leads to understand which fraud vectors are most costly versus most visible — mapping where ML signal quality and operational response are misaligned.

### WEEK 2

#### **Slice and prioritise.**

Identify the single highest-leverage gap between current model output and the business action taken on it, write a sharp one-pager on the data required to close it, and align with engineering and data science on feasibility inside the current sprint cycle.

### WEEK 3+

#### **Ship, measure, iterate.**

Own the first production change to a detection or response flow, instrument the outcome metric correctly from day one, and establish a weekly review cadence with the global market stakeholders to compress the feedback loop between local signal and global product decision.

---

## **I** COVER LETTER

To the Global Anti Fraud Product team at Delivery Hero,

The role asks for a product manager who can anchor anti-fraud products on global benchmarks while localising them to market realities — and who can use ML and data, not just describe them. That combination is more specific than it first appears, and it is one I have been building toward across several prior engagements.

At Rohde & Schwarz, I owned the data provenance and audit trail architecture for a multimodal AI platform inside a defence programme. The problem was not unlike fraud detection: the system needed to produce decisions that were both correct and explainable, with full traceability from raw input to model output. I drove the evaluation framework (SafeAI, ExplainableAI), introduced reproducible transformation pipelines, and delivered features end-to-end from user story to GitOps rollout — including unblocking an infrastructure issue that had stalled engineers for over a year. At the Federal Employment Agency I served as Deputy IT Security Officer

alongside the platform PM role, which meant I was routinely bridging compliance, data governance, and feature delivery at the same time.

Earlier, at Kvitt Payment Solutions, I built the product from the ground up: P2P payment flows, PSP integration, full UX from prototype to mobile app, and the edge-case handling that determines whether a payment system is trusted or avoided. That product was later acquired and operated by Sparkasse. At Qcrypt AG I owned a quantum-secure encryption product aimed at non-technical users, which required me to think carefully about the trust interface – how do you make a high-assurance security product feel effortless? That question is structurally identical to the one Delivery Hero's anti-fraud team faces: how do you protect transactions without making legitimate users feel suspected.

My AI-native working style is directly relevant here. I use Claude and GPT daily for spec drafting and edge-case generation, GitHub Copilot and Cursor for in-repo investigation, and n8n for agentic workflow prototyping. I have also built my own crypto market research infrastructure – a backtest engine and bot framework – which involves exactly the kind of feature engineering, signal validation, and data pipeline thinking that ML-based fraud detection depends on. This is not background knowledge; it is how I work.

Delivery Hero's scale – 65 countries, marketplace economics, profitability pressure – is the environment where shallow PM practice fails and operational depth pays off. I would like to bring mine to this team.

Best regards, *Philipp Hilbert*

## II CURRICULUM VITAE

---

### § BEARING

Product Manager with nearly ten years of experience shipping complex, data-intensive platforms in regulated and high-stakes environments. Background spans AI data management for defence programmes, public-sector analytics platforms, B2B InsurTech SaaS, payment product design, and security product ownership. Consistently operate at the intersection of ML systems, cross-functional delivery, and compliance-sensitive product surfaces. Comfortable in global, multi-stakeholder environments where requirements are incomplete and speed of iteration matters.

---

## § CORE STRENGTHS

- Fraud-adjacent product design: payment flows, security surfaces, audit trails
- ML and data platform product ownership end-to-end
- Cross-functional alignment across engineering, data science, compliance, and operations
- Strong delivery discipline: backlog management, sprint structure, velocity recovery
- Global stakeholder communication, written and verbal
- API-first product thinking with hands-on technical fluency
- Risk-first product discovery under ambiguity
- ETL and data pipeline product ownership (Dagster, dbt, DuckDB)
- AI-native execution: LLM-assisted specs, rapid prototyping, autonomous feature delivery

---

## § PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

*Product Manager, AI Data Transformation*

- Designed and owned data provenance, audit trails, and reproducible transformation pipelines for a multimodal AI platform inside the European defence programme FCAS – directly analogous to the traceability and explainability requirements of ML-based fraud detection.
- Introduced SafeAI and ExplainableAI evaluation concepts to make model decisions auditable for multinational stakeholders.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation, testing, and GitOps-based rollout via ArgoCD.
- Unblocked infrastructure-level issues in OpenShift independently, delivering in one week a feature that had been stalled for over a year.
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

*Product Manager, Public Data Analytics*

- Owned the Arbeitsmarktmonitor, an analytics platform for regional labour market data used by policy and operational stakeholders across Germany.
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual pipelines.

- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, data governance, and data lineage – bridging security and product roles simultaneously.
- Standardised CI/CD with full test integration at build time; migrated legacy systems to Kubernetes.

#### EMIL GROUP 2022, 2022

##### *Product Manager, InsurTech SaaS Platform*

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers.
- Designed and shipped the Claims Center module from concept to production.
- Restored sprint discipline in a struggling delivery organisation: split a 17-person team into effective Scrum units, reintroduced velocity tracking, and reduced senior developer attrition from near-total to a single departure.
- Regained client trust through structured weekly product workshops in a prototype-stage environment.

#### CLINET PLATFORMS 2021, 2022

##### *Product Owner, Mobile Healthcare App*

- Built a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage.
- Integrated CGM interface into hospital information system workflows involving legacy APIs and external databases.
- Managed stakeholder trust through transparent communication of technical constraints under tight deadlines.

---

#### § FOUNDER & EARLY-STAGE EXPERIENCE

#### QCRYPT AG 2016, 2018

##### *Product Owner*

- Owned architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; designed for sub-two-minute setup by non-technical users.
- Served as Deputy IT Security Officer; responsible for attack vector mitigation and security product positioning.
- Delivered spoken English product pitches to international audiences (recorded sample available).

## KVITT PAYMENT SOLUTIONS 2013, 2018

### *Founder & CFO*

- Founded and built a group-based P2P payment product on a P2P backbone, including PSP integration, full UX and UI design, and a mobile app prototype.
- Handled all edge-case flow design for payment failure, dispute, and reconciliation scenarios.
- Product later acquired and operated by Sparkasse.

## BUNDESDRUCKEREI (COVID-19 DATA PLATFORM) 2021, 2021

### *Product Owner*

- Delivered secure data structures and identity management for RKI projects DIM and DESH under strict compliance and timeline pressure.

## AOK HEALTH INSURANCE ITSCARE 2019, 2020

### *Proxy Product Owner*

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policy workflows.
