

Philipp Hilbert. *AI-native Product Manager for Generative and Agentic systems.*

Positioning, ten years owning complex AI and data products end-to-end, now focused on enterprise AI that creates measurable business impact.

§ WHY AI FUTURES / DAX 40

A DAX 40 enterprise investing heavily in Generative AI and Agentic AI at this specific moment – before patterns are settled and before most incumbents have found their footing – is exactly the environment where a PM who can both define a roadmap and unblock an infrastructure-level ticket adds disproportionate value. The posting calls out Generative AI, RAG, and Agentic AI by name, which maps directly to the multi-agent orchestration and AI data platform work I delivered at Rohde & Schwarz and the Bundesagentur für Arbeit. The explicit mention of AI governance and responsible AI frameworks also aligns with my hands-on ownership of SafeAI, ExplainableAI, and data provenance concepts in a government-contract context.

That is the kind of environment where careful, technically literate product ownership compounds quickly.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, spec review, edge-case generation
- **GPT**, research synthesis and stakeholder communication drafts
- **GitHub Copilot**, in-repo acceleration and code review
- **Claude Code**, autonomous in-repo refactors and feature scaffolding
- **Cursor / VSCode**, daily development and product prototyping environment

- **n8n**, multi-agent and agentic workflow orchestration
- **Lovable**, rapid front-end prototyping for early discovery
- **Gamma.app**, structured presentation and workshop materials

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, GitOps pipelines, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, Docker, Bitbucket, Git, Django, AngularJS, Ionic, low-code insurance platforms, CGM API integration, CI/CD with full test integration at build time.

§ SIDE PROJECT

BACKTESTING AND AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal infrastructure for algorithmic crypto strategy development and autonomous agent execution.

- Builds and backtests systematic trading strategies across centralised and decentralised venues including Hyperliquid and Jupiter.
- Implements a file-queue-based agent loop architecture for orchestrating multi-step autonomous execution pipelines.
- Integrates market microstructure data sources (liquidation heatmaps, Coinglass, Hyblock Capital) for signal generation.
- Directly relevant to agentic AI product work: the architecture mirrors the agent orchestration patterns required in enterprise AI automation initiatives.

§ HOW I WOULD WORK AT AI FUTURES / DAX 40

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow existing stakeholder forums, audit the current AI product backlog and roadmap artefacts, and produce a written gap analysis of where business problem statements are not yet translated into actionable product requirements – using the same structured workflow-mapping approach I applied on the FCAS programme.

WEEK 2

Slice and validate.

Identify the one or two AI initiatives closest to a shippable MVP, define clear acceptance criteria and success metrics, and run a structured refinement session with engineering and data science to surface hidden feasibility risks before they reach sprint planning.

WEEK 3+

Ship and unblock.

Take the first initiative through its first delivery cycle, monitor early adoption and ROI signals, and establish the reporting cadence that keeps senior leadership informed without slowing the delivery team.

I COVER LETTER

To the hiring team at AI Futures,

I am applying for the AI Product Owner role you are placing at a major German DAX 40 enterprise. My background is a close fit: nearly ten years as a hands-on Product Manager and Product Owner across AI data platforms, analytics systems, and regulated B2B SaaS, including direct ownership of Generative AI and data transformation products in a government-contract setting. I speak German natively, hold EU citizenship, and can relocate to Cologne.

The most directly relevant engagement is my recent role at Rohde & Schwarz, where I owned the product vision and delivery for a central AI and data management platform within the European defence programme FCAS. The platform handled multimodal datasets and fed curated data into ML training and evaluation pipelines. I introduced SafeAI and ExplainableAI evaluation concepts, built audit trails with full data provenance, and delivered autonomous feature sets end-to-end – from user stories through to GitOps rollout with ArgoCD. I reduced deployment times from several days to under forty minutes and unblocked an infrastructure-level OpenShift issue independently that the engineering team had been unable to resolve for over a year. That combination of product rigour and technical self-sufficiency is what I would bring to this role.

At the Bundesagentur für Arbeit I owned a public-facing analytics platform for regional labour market data. I introduced Dagster for automated ETL, managed a Kubernetes migration, served as Deputy IT Security Officer, and standardised CI/CD. This is the kind of large-organisation, compliance-adjacent environment the posting describes – and I have a working understanding of how to navigate governance requirements without letting them become a delivery bottleneck.

At Emil Group I inherited a broken delivery programme: a 17-person team with no sprint discipline, high senior developer attrition, and a client relationship close to collapse. I split the

team into effective Scrum units, reintroduced velocity tracking and structured refinement, ran weekly product workshops to rebuild client trust, and reduced senior developer attrition from near-total to a single departure. Stakeholder management in a high-pressure enterprise context is not theoretical for me – I have done it when the stakes were high.

I build and use AI-native tooling daily: I use Claude and GPT for requirements synthesis and edge-case generation, GitHub Copilot and Claude Code for in-repo acceleration, n8n for agentic workflow orchestration, and Lovable for rapid front-end prototyping in early discovery. I also maintain a personal backtesting and agent framework for algorithmic crypto strategy development, which has deepened my practical understanding of multi-agent orchestration architectures – the same patterns that underpin enterprise agentic AI initiatives.

I would welcome a conversation about the specific AI initiatives this enterprise is running and how my background maps to their current stage.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience delivering AI platforms, analytics systems, and regulated B2B SaaS products. Owned the full product lifecycle for a Generative AI and data management platform within a European defence programme, including SafeAI governance, data provenance, and GitOps delivery. Comfortable operating as the interface between senior leadership and technical delivery teams in large-organisation environments. AI-native by practice: uses LLMs, agentic workflows, and rapid prototyping tools as daily instruments. German native, English C2, EU citizen.

§ CORE STRENGTHS

- Translating business challenges into dev-ready AI product requirements
- Generative AI, agentic workflow design, and LLM-assisted delivery
- AI governance: SafeAI, ExplainableAI, data provenance, audit trails
- Roadmap ownership and backlog management in agile enterprise environments
- Cross-functional stakeholder alignment across engineering, data science, compliance, and leadership

- ETL and data platform product ownership (Dagster, dbt, DuckDB)
 - DevOps and infrastructure fluency enabling independent unblocking
 - Workshop facilitation and client trust rebuilding under delivery pressure
 - Founder-level pragmatism: low ego, high agency, delivery-oriented
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned vision, strategy, and delivery for a central AI and data management platform within the FCAS European defence programme
- Defined SafeAI and ExplainableAI evaluation concepts; built audit trails with full data provenance for ML training and evaluation pipelines
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout with ArgoCD
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps
- Unblocked infrastructure-level OpenShift issues independently; delivered in one week a feature the project lead had been requesting from engineers for over a year
- Led a cross-functional team of architects, data scientists, backend and frontend engineers, and QA with multinational stakeholders

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor, an analytics platform for regional labour market and demographic data used across government and enterprise stakeholders
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product delivery for a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a bloated 17-person team into focused Scrum units and introduced ownership and deputy concepts
- Regained client trust in a prototype-stage environment through structured stakeholder communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows for digital anamnesis, therapy plans, meal plans, transport, chat, and document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows under tight deadlines
- Built stakeholder trust through transparent communication of technical complexity including legacy APIs and external database constraints

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Owned the product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security governance

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a group-based P2P payment product on a P2P backbone; owned PSP integration, full UX/UI design, and mobile app prototype
- Product was later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, and Project Lead

- Established full digital tooling, financial and investment planning, and ERP introduction across multiple roles over the company lifecycle
