Dear Hiring Team,

I am applying for the Senior Product Owner Agentic AI B2B role at SIXT. The combination of agentic AI, B2B sales process ownership, and global deployment at scale is a design space I have been working in directly – and one I want to own end-to-end.

At Rohde & Schwarz, I built and shipped a central AI data management platform inside a multinational defence programme, owning everything from user stories and acceptance criteria through to GitOps rollout. I designed audit-trail pipelines, SafeAI evaluation concepts, and autonomous feature sets that unblocked a cross-functional team of architects, data scientists, and engineers. The work required me to translate between business needs and technical constraints daily, which is exactly the skill the SIXT role demands when bridging sales, engineering, and data science around conversational AI.

At Emil Group, I took over a B2B SaaS platform that had lost client trust and sprint discipline simultaneously. I restructured a 17-person team into smaller Scrum units, reintroduced velocity tracking, and ran weekly product workshops that rebuilt stakeholder confidence in a prototype-stage environment. I know what it takes to keep a roadmap credible when the system is mid-construction and the business is watching closely.

The agentic AI component of this role is not new territory for me. I have designed multi-agent workflows using n8n, built autonomous agent loops with file-queue-based orchestration, and used Claude, GPT, and GitHub Copilot daily to accelerate delivery. I understand the difference between a well-designed fallback in a voicebot and a frustrating dead end, and I know how to set up the KPIs that distinguish the two.

SIXT's product mandate here – Virtual Sales Assistants, chat and voice bots, CRM integration with Salesforce – is the kind of work that requires both product rigour and genuine AI fluency. I bring both, along with the German-language B2B context, the cross-functional stakeholder management experience, and the delivery track record to execute it.

I would welcome the opportunity to talk.

Best regards, *Philipp Hilbert*
