

# Philipp Hilbert. *Product Owner who ships AI features, not just backlogs.*

*Positioning*, ten years of end-to-end product ownership in B2B SaaS, now ready to drive AI-native governance tooling in the Microsoft ecosystem.

## § WHY BOARDWISE

Boardwise sits at the intersection of governance process, document intelligence, and AI-assisted decision support — a combination that requires a Product Owner who can translate board-level language into technically precise user stories without losing either audience. The job description names Microsoft Copilot and LLM-based features as active development priorities, not future ambitions, which signals a team that is already past the "should we do AI?" conversation and into the harder work of making it reliable and auditable. That matches where I have spent the last two years. *That is exactly the kind of product complexity where careful backlog stewardship compounds into real business value.*

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, spec drafting, edge-case generation, acceptance criteria review
- **GPT**, stakeholder documentation, user story refinement
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, assisted development and code review
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframes and stakeholder walkthroughs
- **Gamma.app**, product decks and roadmap presentations
- **n8n**, agentic workflow automation and backlog pipeline tooling

---

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Python, Kotlin, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, Django, AngularJS, Ionic, Redpanda, MicroStrategy, CGM API integration, Shopware, Office 365, Azure-adjacent infrastructure.

---

## § SIDE PROJECT

CRYPTO BACKTESTING & AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

*Personal infrastructure project combining a backtesting engine, agentic automation, and multi-venue trading logic.*

- Builds and tests algorithmic trading strategies against historical market data across centralised and decentralised venues.
  - Implements a file-queue-based agent loop orchestrated via n8n for autonomous signal processing and execution.
  - Actively iterated against live data from Hyperliquid, Bitget, Jupiter, and cross-chain bridge flows.
  - Demonstrates the same autonomous feature delivery discipline – requirements, implementation, rollout – that applies directly to LLM feature integration at Boardwise.
- 

## § HOW I WOULD WORK AT BOARDWISE

*First weeks, concrete.*

### WEEK 1

**Listen, map, find the gaps.**

Walk every active backlog lane with engineering, read the existing user stories for Copilot and LLM features, sit in on one stakeholder call to hear how board secretaries and governance officers actually describe their pain.

## WEEK 2

### Refine and sharpen.

Rewrite the top ten backlog items with acceptance criteria precise enough that a developer can estimate them without a follow-up meeting, and flag the three items where business intent and technical spec are furthest apart.

## WEEK 3+

### Ship and close loops.

Own the first sprint end-to-end, facilitate the retrospective, and propose one change to the refinement cadence based on what slowed the team down.

---

## *I* COVER LETTER

Dear Boardwise team,

Governance software for board offices sounds niche until you look at what it actually requires: workflow logic for multi-stakeholder approval chains, document intelligence, role-based access for people who are not power users, and increasingly, AI features that have to be explainable to a compliance-conscious audience. That combination is harder to specify than most enterprise SaaS, and it rewards a Product Owner who can hold complexity without adding it.

That is the work I have been doing. At Rohde & Schwarz I owned an AI and data management platform inside the FCAS defence programme, where stakeholders included multinational engineering teams, data scientists, and compliance reviewers. I wrote the user stories, set the acceptance criteria, supported implementation, and handled the GitOps rollout myself when the engineering queue was blocked. At Emil Group I inherited a bloated 17-person team, split it into smaller Scrum units, reintroduced velocity tracking, and ran weekly product workshops to rebuild client trust in a prototype-stage product. Both environments required exactly what Boardwise is asking for: translating board-level and management-level language into technically precise, shippable increments.

The Microsoft ecosystem requirement is concrete for me. At the Federal Employment Agency I worked within an Azure-adjacent infrastructure stack, managed Kubernetes-based deployments, and coordinated with identity and compliance teams. I understand M365 and Azure not as marketing checkboxes but as constraints that shape what a backlog item can realistically deliver in a sprint. When the job description mentions Copilot and LLM-based features, I read that as active integration work requiring someone who can evaluate feasibility honestly and write acceptance criteria that survive contact with an API's actual behaviour.

I am based in Berlin, hold German citizenship, and am genuinely comfortable with the async-remote model. My communication in both German and English is at native and C2 level respectively – I have a public English-language product pitch on YouTube from my time at Qcrypt AG if that is useful evidence. I can start within four weeks of an offer.

I would welcome a conversation about how the AI feature roadmap is currently structured and where the biggest translation gap sits between business intent and technical delivery.

Best regards, *Philipp Hilbert*

---

## II CURRICULUM VITAE

---

### § BEARING

Product Owner and Product Manager with nearly ten years of experience in B2B SaaS, regulated environments, and AI-integrated platforms. Specialises in translating complex operational requirements into precise, shippable backlog items across cross-functional teams. Delivered AI data management infrastructure for a European defence programme, rebuilt sprint discipline and stakeholder trust at a prototype-stage InsurTech platform, and drove analytics product development at a federal public institution. Comfortable in the Microsoft ecosystem, fluent in agile delivery, and practiced at managing stakeholders from engineering to board level.

---

### § CORE STRENGTHS

- Backlog ownership: prioritisation, refinement, sprint discipline
- Translating stakeholder language into dev-ready user stories and acceptance criteria
- AI feature integration in enterprise SaaS environments
- Microsoft ecosystem fluency (M365, Azure-adjacent infrastructure, Copilot-adjacent tooling)
- Cross-functional alignment across engineering, UX, data, and compliance
- Stakeholder management at management and board level
- Agile process recovery and team restructuring under delivery pressure
- End-to-end autonomous feature delivery including GitOps rollout
- German C2 / English C2 communication across all stakeholder levels

---

## § PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

*Product Manager, AI Data Transformation*

- Owned end-to-end AI data management platform for multimodal datasets within the FCAS European defence programme, managing backlog across architect, data scientists, backend, frontend, and QA
- Delivered AI feature sets including data filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance and SafeAI / ExplainableAI concepts
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD, independently unblocking infrastructure issues in OpenShift that had stalled engineers for over a year
- Delivered autonomous features end-to-end: user stories, acceptance criteria, implementation support, testing, and rollout
- Managed multinational stakeholder communication on data transformation, transparency, and auditability

*Tech: Kotlin, Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift, Redpanda*

---

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

*Product Manager, Public Data Analytics*

- Advanced the Arbeitsmarktmonitor analytics platform; delivered labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time; managed major system upgrades

*Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket*

---

## EMIL GROUP 2022

### *Product Manager, InsurTech SaaS Platform*

- Owned backlog for a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters; delivered modules across pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Split a bloated 17-person team into smaller Scrum units; reintroduced velocity tracking, structured refinement, and ownership concepts
- Rebuilt client trust in a prototype-stage environment through structured stakeholder communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

*Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs*

---

## CLINET PLATFORMS 2021, 2022

### *Product Owner, Mobile Healthcare App*

- Delivered core hospital app flows: digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system (KIS) workflows
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases

*Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration*

---

## § FOUNDER & EARLY-STAGE EXPERIENCE

### QCRYPT AG 2016, 2018

#### *Co-Founder, Product Owner*

- Owned product architecture for quantum-secure encryption based on one-time-pad keys and true random number generator hardware; designed for sub-two-minute setup with no technical knowledge required
- Served as Deputy IT Security Officer; responsible for attack vector mitigation and security positioning

## KVITT PAYMENT SOLUTIONS 2013, 2018

*Founder, CFO*

- Built group-based P2P payment product on a P2P backbone; handled PSP integration, UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

## AOK HEALTH INSURANCE – ITSCARE 2019, 2020

*Proxy Product Owner*

- Migrated internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies for a public health insurance environment
