

Philipp Hilbert. *Data & Connectivity Product Owner for analytical software platforms.*

Positioning, ten years translating complex operational workflows into dev-ready backlogs, now bringing that discipline to Agilent's Data Fabric and connectivity layer.

§ WHY AGILENT

Agilent is one of the few companies where the words "data platform" and "regulatory compliance" appear in the same sentence not as buzzwords but as engineering constraints – because the downstream users are running actual laboratory workflows where data integrity matters. The explicit focus on API gateway, file management, structured data, and transformation services maps directly to the kind of platform infrastructure I have shipped: ETL pipelines, audit trails, data provenance, and cross-team backlog ownership across regulated environments. That Agilent names CDS, SDMS, LIMS, and ELN familiarity as a plus – rather than a hard requirement – signals a team comfortable hiring a strong platform PM and letting domain knowledge follow. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not worked inside a laboratory informatics stack (LIMS, CDS, ELN) directly; my regulated-environment experience comes from defence-grade AI data platforms and public-sector analytics, not life-science instruments. The transferable mechanic is identical: data provenance, transformation auditability, and cross-functional alignment across engineering, QA, and compliance stakeholders – which I have done at production scale.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
 - **GPT**, user story refinement and stakeholder communication
 - **GitHub Copilot**, in-repo code review and specification support
 - **Cursor / VSCode**, feature-level implementation support
 - **Lovable**, rapid front-end prototyping
 - **Gamma.app**, stakeholder-ready slide decks
 - **n8n**, agentic workflow automation
 - **Framer**, design-heavy prototyping
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Dagster, dbt, DuckDB, Redpanda, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, MicroStrategy, Docker, CI/CD pipelines, GitOps rollout patterns.

§ SIDE PROJECT

BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A crypto-market backtesting and algorithmic decision framework built from the ground up.

- Ingests multi-venue market data and runs configurable strategy simulations across spot and perpetual markets.
- Built on a file-queue-based agent loop with DuckDB as the local analytical store for fast slice-and-replay.
- Actively developed alongside a custom dev-agent framework for automated code generation and test coverage.
- Demonstrates the data pipeline and structured-data transformation ownership that directly applies to Agilent's Data Fabric layer.

§ HOW I WOULD WORK AT AGILENT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow engineering standups, read existing epics and acceptance criteria, and map the current API gateway and file management backlog against the stated customer workflows to identify where requirements are thin or acceptance criteria are missing.

WEEK 2

Sharpen and slice.

Run a backlog grooming session with engineering to tighten the top-priority stories, introduce explicit acceptance criteria templates aligned with Agilent's fit-for-use standard, and flag the first technical dependencies that need resolution before sprint commitment.

WEEK 3+

Ship and close loops.

Take ownership of sprint review preparation, track velocity against the roadmap, and establish a standing weekly sync with Product Management, Field Teams, and Application Engineers to keep deliverables anchored to real laboratory workflows.

I COVER LETTER

Dear Hiring Team,

I am writing to apply for the Data & Connectivity Product Owner role at Agilent Technologies. The combination of API gateway ownership, data transformation services, and the expectation that the successful candidate can move fluidly between business strategy and engineering execution describes work I have been doing for the last several years – most recently in a regulated, defence-grade data platform environment at Rohde & Schwarz.

At Rohde & Schwarz, I owned the product backlog for a central AI and data management platform within the FCAS defence programme. The platform ingested multimodal datasets, applied filtering and tagging pipelines, and maintained full data provenance and audit trails so that downstream ML training and evaluation were reproducible and explainable. I delivered feature sets end-to-end – writing user stories and acceptance criteria, supporting implementation, and managing GitOps-based rollout with ArgoCD – reducing deployment

times from several days to under forty minutes. The work required constant cross-functional alignment across architects, data scientists, backend engineers, frontend engineers, QA, and multinational stakeholders with regulatory expectations. That is the same cross-functional surface area the Agilent role describes.

Before that, at the Federal Employment Agency, I owned the product backlog for the Arbeitsmarktmonitor, a public analytics platform. I introduced Dagster for automated ETL and indicator generation, managed structured data and transformation pipelines using dbt and DuckDB, and served as Deputy IT Security Officer with responsibility for compliance and data lineage. The fit with Agilent's Data Fabric scope – structured data, file management, transformation services – is direct.

At Emil Group, I inherited a product in client-trust deficit and a bloated 17-person scrum team with collapsed sprint discipline. I split the team into smaller, accountable units, reintroduced velocity tracking and structured refinement, and rebuilt client trust through weekly product workshops and transparent communication about technical complexity. I mention this because the Agilent posting names continuous improvement of Agile delivery processes and fit-for-use testing as explicit responsibilities – these are not aspirational for me; they are patterns I have applied under pressure.

I do not have hands-on experience with LIMS, CDS, or ELN systems specifically, and I want to name that clearly. What I bring is deep platform PM experience in regulated data environments, strong Agile delivery practice, and the technical fluency to engage engineering teams on architecture questions without losing the customer workflow perspective. I am confident that laboratory-informatics domain knowledge follows quickly when the structural skills are already in place.

I would welcome the opportunity to discuss how my background maps to the Data Fabric and Connectivity team's current priorities.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with close to ten years of experience owning data platform backlogs in regulated and technically complex environments. Delivered end-to-end feature sets across AI data management, public analytics, InsurTech SaaS, and mobile healthcare – always as the primary interface between business stakeholders and engineering teams. Fluent

in Agile delivery, backlog grooming, sprint discipline, and cross-functional alignment. Technically literate across modern cloud and data infrastructure; comfortable translating architecture constraints into prioritization decisions without losing the customer workflow perspective.

§ CORE STRENGTHS

- Backlog ownership and sprint discipline in regulated environments
 - Data pipeline and transformation product ownership (ETL, audit trails, provenance)
 - Cross-functional alignment across engineering, QA, compliance, and field teams
 - End-to-end feature delivery: user stories through GitOps rollout
 - API and platform product design for B2B SaaS contexts
 - Agile process improvement and team restructuring under delivery pressure
 - Technical fluency across cloud infrastructure and data tooling
 - User story development and acceptance criteria definition
 - AI-native product execution and rapid prototyping
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned the backlog for a central AI data management platform within the FCAS defence programme, covering multimodal data ingestion, filtering, tagging, and transformation pipelines
- Defined acceptance criteria and user stories for data provenance and audit-trail features enabling reproducible ML training and evaluation (SafeAI, ExplainableAI concepts)
- Delivered autonomous feature sets end-to-end: user stories, implementation support, testing, and GitOps-based rollout with ArgoCD
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year
- Led a cross-functional team spanning architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned the product backlog for the Arbeitsmarktmonitor, an analytics platform for regional labour market and demographic data
- Introduced Dagster for automated ETL and indicator generation; managed structured data transformation pipelines using dbt and DuckDB
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time
- Designed interactive dashboards and community features for a broad stakeholder audience

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned the backlog for a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline; split a bloated 17-person team into smaller Scrum units with ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices; rebuilt client trust through weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned delivery of a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity around legacy APIs and external databases
- Led a small cross-functional team under tight deadlines with strict focus on highest-leverage features

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Co-Founder & CDO – Smart Soil Technologies (2016–2021):** Full digital tooling establishment, financial and investment planning for an agritech vertical farming startup.
- **Product Owner – Qcrypt AG (2016–2018):** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware. Also served as deputy IT security officer. Product video: youtube.com/watch?v=nt06f71lgfE
- **Proxy Product Owner – AOK Health Insurance / ITSCare (2019–2020):** Migration of internal webshop to Shopware, including complex catalogue and API integration with customisable approval policies.
- **Founder & CFO – Kvitt Payment Solutions (2013–2018):** Group-based P2P payments on a P2P backbone. PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
