

Philipp Hilbert. *Platform PM who ships AI infrastructure, not just roadmaps.*

Positioning, product manager with ten years of cross-functional delivery experience, ready to own the "AI as a Platform" layer at a regulated European fintech at scale.

§ WHY SCALABLE CAPITAL

Scalable Capital is operating at a genuinely interesting inflection point: over one million clients, €30 billion in assets, a full banking licence, and a declared intent to move from isolated AI experiments to a unified internal AI platform. That is exactly the kind of structural challenge where the work is not prototyping a demo but designing governance, integration patterns, and compliance guardrails that hold under regulatory scrutiny. The job description calls out agent architectures, LLM trace analysis, and DPO alignment in the same breath as backlog ownership – that combination is rare and precise. *That is the environment where platform product thinking and AI-native execution compound rather than compete.*

§ HONEST FRAMING

Direct experience inside a retail brokerage or wealth management product is not on my CV. What is there is a pattern of owning AI and data platform products inside regulated environments – defence procurement, public sector analytics, and InsurTech – where compliance and audit trails are non-negotiable product requirements, not afterthoughts.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, trace analysis
- **GPT**, research synthesis and stakeholder communication drafts
- **GitHub Copilot**, in-editor implementation support
- **Claude Code**, in-repo refactors and autonomous feature delivery
- **Cursor / VSCode**, primary development environment
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframing and concept validation
- **n8n**, multi-agent workflow orchestration

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, OpenShift, Argo Workflows, Dagster, dbt, DuckDB, Redpanda, Jenkins, GitOps pipelines, Docker, MicroStrategy, AngularJS, Ionic, and low-code insurance platforms – all in production contexts across defence, public sector analytics, InsurTech SaaS, and mobile healthcare.

§ SIDE PROJECT

DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A file-queue-based autonomous agent loop for crypto market analysis and backtesting.

- Orchestrates multi-step research and execution tasks across LLM calls without requiring human checkpoints between steps.
- Architected on a file-queue pattern enabling persistent state across sessions and parallel agent branches.
- Feeds into a backtesting engine for crypto trading strategies, with structured output for signal evaluation.
- Directly transferable to the AI platform context: agent loop design, trace inspection, and evaluation pipelines are the same engineering problems Scalable Capital is solving for client-facing AI features.

§ HOW I WOULD WORK AT SCALABLE CAPITAL

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the AI platform team and three to four internal domain teams (wealth, broker, fraud) to map where AI capabilities are being consumed today, where teams are building their own integrations around the platform, and where the compliance and DPO review process is creating bottlenecks.

WEEK 2

Audit, slice, prioritise.

Produce a gap audit of the current platform surface area against the use cases already in flight, identify the highest-leverage unblocking work (missing APIs, missing governance guardrails, missing evaluation tooling), and propose the first two-sprint slice.

WEEK 3 +

Ship, instrument, iterate.

Drive the first platform increment to production alongside the engineering team, establish lightweight trace-logging and evaluation baselines for any LLM-backed feature already live, and set up a recurring internal demand forum so domain teams can surface AI use cases before they build workarounds.

I COVER LETTER

Dear Hiring Team,

The role of Product Manager for the AI Platform at Scalable Capital is interesting to me for a specific reason: the work described is not "add AI features" but "build the infrastructure layer that makes AI trustworthy and consumable at scale inside a regulated institution." That is a harder and more precise problem, and it is the kind I have been working on.

At Rohde & Schwarz I owned the data management platform for a multimodal AI training system inside the FCAS defence programme – a context where data provenance, audit trails, SafeAI and ExplainableAI compliance were contractual requirements, not optional. I delivered autonomous feature sets end-to-end, reduced deployment cycles from several days to under forty minutes via GitOps, and served as the cross-functional interface between data scientists,

backend engineers, architects, and multinational stakeholders. The platform I built there had to be consumed by domain teams who had no interest in the infrastructure layer – which is exactly the internal-developer-experience challenge your posting describes.

At the Federal Employment Agency I served concurrently as Product Manager and Deputy IT Security Officer on a public data analytics platform, which required me to hold governance and compliance thinking at the same level as delivery. I introduced Dagster-based ETL pipelines, managed Kubernetes migrations, and standardised CI/CD with full test integration – while keeping a cross-functional team aligned on a complex regulatory data environment. The combination of platform ownership and compliance responsibility in a single PM role is not common; I have done it.

At Emil Group I took over an InsurTech SaaS platform in a state of delivery breakdown and re-established sprint discipline, split an unmanageable seventeen-person team into effective Scrum units, and rebuilt client trust through structured weekly product workshops. That experience sharpened my thinking about what it takes to make a platform team legible and reliable to the internal teams depending on it – which is the "easy-to-integrate services for all internal domain teams" goal named in your job description.

On the AI tooling side, I work daily with Claude, GPT, GitHub Copilot, and Claude Code for spec generation, edge-case analysis, implementation support, and in-repo refactoring. I have built a file-queue-based autonomous agent framework for my own crypto research and backtesting work, which has given me practical exposure to agent loop design, trace inspection, and the evaluation problems that arise when LLM outputs need to be trusted in downstream systems. I understand the gap between "the model responded" and "the model responded correctly and we can prove it."

I am based in Berlin and open to relocating to Munich. I am an EU citizen and need no sponsorship. I would welcome a conversation about the role.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager with nearly ten years of experience owning AI and data platform products inside regulated environments. Built and shipped a central AI data management platform for a European defence programme, owned a public-sector analytics platform with concurrent IT security officer responsibility, and restored delivery stability on a multi-team

InsurTech SaaS programme. Fluent in the full platform PM stack: agent architectures, LLM evaluation, compliance and data governance, GitOps delivery, and cross-functional stakeholder alignment across engineering, data science, legal, and executive audiences. Operates AI-native tooling daily.

§ CORE STRENGTHS

- AI platform product ownership in regulated, audited environments
 - LLM evaluation, trace analysis, and agent loop design
 - Cross-functional alignment: engineering, data science, compliance, DPO
 - ETL and data pipeline product ownership (Dagster, dbt, DuckDB)
 - GitOps-based delivery and DevOps infrastructure fluency
 - Backlog management, sprint discipline, and team restructuring
 - Risk-first product discovery under regulatory and delivery pressure
 - AI compliance concepts: SafeAI, ExplainableAI, data provenance
 - Technical fluency: Python, Kotlin, PostgreSQL, Kubernetes, REST APIs
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned the central AI and data management platform for multimodal datasets (image, audio, tabular) within the FCAS European defence programme
- Delivered data provenance, audit trails, and transparent evaluation concepts (SafeAI, ExplainableAI) as first-class product requirements in a compliance-critical context
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Reduced deployment cycles from several days to 20–40 minutes by introducing GitOps
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features on the Arbeitsmarktmonitor analytics platform: labour shortage analytics, flexible regional comparison, modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; managed Kubernetes migration and major system upgrades
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage in a public-sector regulatory context
- Standardised CI/CD with full test integration at build time

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product development on a B2B InsurTech platform reducing insurance time-to-market from over one year to under one week, serving primary insurers, reinsurers, MGAs, and brokers
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline by splitting a 17-person team into focused Scrum units; reintroduced velocity tracking and structured refinement
- Rebuilt client trust in a prototype-stage environment through structured weekly product workshops

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, therapy plans, patient document storage, and CGM interface integration into hospital information systems
- Managed stakeholder expectations transparently around legacy API constraints and external database dependencies

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- Owned RKI projects DIM and DESH; responsible for secure data structures and identity management in a high-sensitivity public-health context

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Co-founded and owned the product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for non-technical end users: full setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector analysis and security posture

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone; owned PSP integration, full UX/UI design, and mobile app prototype
- Platform later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Head of HR

- Full establishment of digital tooling, financial and investment planning, ERP introduction, and investor relations across five years of company building
