

Philipp Hilbert. *Product Owner who turns data complexity into team clarity.*

Positioning, experienced Product Owner with a decade of data platform and analytics delivery, fluent in both stakeholder rooms and sprint boards.

§ WHY CARRACTA

The role sits at the intersection of automotive domain knowledge, data product delivery, and structured agile execution — a combination I have worked in rather than studied. The job description names "Car Analytics" as the domain requiring translation into comprehensible work packages, which is exactly the kind of structured decomposition I delivered at Rohde & Schwarz and the Federal Employment Agency. The detail that CARRACTA builds data products for 3rd-party API marketplaces mirrors the platform-facing product work at those engagements.

That is exactly the environment where my strengths compound.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, stakeholder-ready documentation and user story refinement
- **GitHub Copilot**, in-sprint technical review and spec validation
- **Cursor / VSCode**, hands-on implementation support alongside dev teams
- **Gamma.app**, milestone presentations and roadmap communication
- **Confluence**, structured knowledge management and decision logs
- **n8n**, workflow automation and process mapping
- **Lovable**, rapid prototype generation for requirement validation

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Argo Workflows, OpenShift, Helm, Jenkins, Bitbucket, Git, REST APIs, Kotlin (Spring Boot), Redpanda, MicroStrategy, AngularJS, Ionic.

§ SIDE PROJECT

BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal crypto market backtesting framework built to validate algorithmic trading strategies on historical data.

- Ingests historical OHLCV data from centralised and decentralised venues and runs configurable strategy logic against it.
 - Built on a file-queue-based agent loop architecture, allowing modular strategy components to be swapped and tested independently.
 - Accompanies active trading across Hyperliquid, Jupiter, and 1inch; strategy ideas are validated here before live deployment.
 - Demonstrates the data pipeline thinking – ingestion, transformation, evaluation, audit – directly transferable to a Car Analytics data product context.
-

§ HOW I WOULD WORK AT CARRACTA

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Attend all scrum ceremonies as an observer, shadow stakeholder touchpoints, and produce a written map of the current data product architecture, open epics, and unresolved backlog items to establish a shared baseline.

WEEK 2

Slice and validate.

Work with the development team to break the largest open epic into user stories with clear acceptance criteria, running one structured workshop with the customer to confirm the product vision is shared.

WEEK 3+

Own the backlog.

Take full ownership of refinement, sprint planning, and milestone reporting; establish capacity and budget tracking that gives both the team and stakeholders a single source of truth.

I COVER LETTER

Dear Hiring Team,

I am applying for the Product Owner Data role at CARRACTA. I have spent the past several years owning data-intensive product backlogs in complex domains – government labour market analytics, defence AI platforms, and B2B InsurTech – and I know from experience that the hardest part of this work is not writing user stories but building the shared understanding that makes those stories actionable.

At the Federal Employment Agency I advanced the Arbeitsmarktmonitor, a platform for regional labour market and demographic data. That meant translating statistical and regulatory complexity into sprint-ready features for a mixed team of data engineers, backend developers, and frontend specialists, while also serving as Deputy IT Security Officer. At Rohde & Schwarz I owned the full product lifecycle for a multimodal AI data management platform inside the FCAS defence programme – a domain with similarly specialised vocabulary, multinational stakeholders, and a zero-tolerance approach to data provenance and auditability. In both cases the core skill was the same: ask the right questions, develop a shared vision, and break it into work the team can actually ship.

The Car Analytics domain described in the job posting requires exactly this kind of translation. Automotive data – whether fleet telematics, component performance, or market intelligence – is rich, specialised, and often arrives in forms that are meaningful to domain experts but opaque to engineering teams. I am comfortable sitting in that gap and building the bridge in both directions.

On the process side, I have restructured dysfunctional Scrum setups (at Emil Group I split a bloated 17-person team into focused delivery units, reintroduced velocity tracking, and recovered near-total client trust in a prototype-stage environment), introduced structured refinement practices where they had lapsed, and managed budget and capacity planning on government contracts. I am experienced with Confluence for knowledge management, Git-based workflows, and the full range of Scrum ceremonies the role describes.

I am German-native, based in Berlin, and would welcome a conversation about how my background fits the specific data products CARRACTA is building for its automotive clients.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner with nearly ten years of experience owning data-intensive backlogs in complex, regulated, and technically demanding environments. Background spans AI and data management platforms, public sector analytics, InsurTech SaaS, healthcare mobile products, and founder-level company building. Comfortable translating domain-specific complexity – statistical, automotive, financial, or medical – into sprint-ready user stories and convincing stakeholder communication. Fluent in Scrum, backlog management, capacity planning, and the full delivery cycle from epic to production rollout. AI-native in daily execution.

§ CORE STRENGTHS

- Translating domain complexity into dev-ready user stories
 - Backlog ownership, sprint discipline, and velocity management
 - Cross-functional stakeholder alignment and milestone communication
 - Budget and capacity planning on multi-team projects
 - Data platform product delivery: ETL, dashboards, audit trails
 - Scrum restructuring and team health recovery
 - Workshop facilitation with technical and non-technical audiences
 - Deputy IT security and compliance governance
 - AI-native product execution across the full development cycle
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned backlog and delivery for a central AI and data management platform for multimodal datasets (image, audio, tabular) within the European defence programme FCAS
- Improved data quality through filtering, tagging, reproducible data transformation pipelines, and audit trails with full data provenance

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI)

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor, an analytics platform for regional labour market and demographic data
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration
- Designed interactive dashboards, tables, and community features (groups, networks, events)
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned backlog and delivery for a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a bloated 17-person team into smaller Scrum units; introduced ownership and deputy concepts and reintroduced velocity tracking
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned backlog for a mobile-first pilot app for hospitals across iOS and Android
- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage

- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity (legacy APIs, external databases)

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for setup under two minutes with no technical knowledge required; served also as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments platform; owned PSP integration, full UX/UI design, and mobile app prototype
- Platform later acquired and operated by Sparkasse

AOK HEALTH INSURANCE ITSCARE 2019, 2020

Proxy Product Owner

- Owned migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies
