Dear Hiring Team,

I am applying for the Product Owner Data role at CARRACTA. I have spent the past several years owning data-intensive product backlogs in complex domains – government labour market analytics, defence AI platforms, and B2B InsurTech – and I know from experience that the hardest part of this work is not writing user stories but building the shared understanding that makes those stories actionable.

At the Federal Employment Agency I advanced the Arbeitsmarktmonitor, a platform for regional labour market and demographic data. That meant translating statistical and regulatory complexity into sprint-ready features for a mixed team of data engineers, backend developers, and frontend specialists, while also serving as Deputy IT Security Officer. At Rohde & Schwarz I owned the full product lifecycle for a multimodal AI data management platform inside the FCAS defence programme – a domain with similarly specialised vocabulary, multinational stakeholders, and a zero-tolerance approach to data provenance and auditability. In both cases the core skill was the same: ask the right questions, develop a shared vision, and break it into work the team can actually ship.

The Car Analytics domain described in the job posting requires exactly this kind of translation. Automotive data – whether fleet telematics, component performance, or market intelligence – is rich, specialised, and often arrives in forms that are meaningful to domain experts but opaque to engineering teams. I am comfortable sitting in that gap and building the bridge in both directions.

On the process side, I have restructured dysfunctional Scrum setups (at Emil Group I split a bloated 17-person team into focused delivery units, reintroduced velocity tracking, and recovered near-total client trust in a prototype-stage environment), introduced structured refinement practices where they had lapsed, and managed budget and capacity planning on

government contracts. I am experienced with Confluence for knowledge management, Git-based workflows, and the full range of Scrum ceremonies the role describes.

I am German-native, based in Berlin, and would welcome a conversation about how my background fits the specific data products CARRACTA is building for its automotive clients.

Best regards, *Philipp Hilbert*
