

Philipp Hilbert. *Product Manager who ships agentic systems, not just roadmaps.*

Positioning, ten years of hands-on platform PM experience, now applied to reshaping a programmatic research exchange around agentic insight delivery.

§ WHY CINT

Cint's stated ambition – reshaping the Exchange around agentic delivery of insights – is precisely the problem space I have been building toward. The job description calls out "agentic delivery of insights" as the north star, which maps directly to my work designing multi-agent orchestration workflows and owning AI data platforms in production. A programmatic marketplace at 300 million respondents is a system where small improvements in data quality, routing, and automation compound massively across every transaction. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, specification writing, edge-case generation, document drafting
- **GPT**, research synthesis and stakeholder narrative preparation
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, day-to-day development environment
- **Lovable**, rapid front-end prototyping and concept validation
- **Framer**, design-heavy communication artefacts
- **n8n**, multi-agent and agentic workflow design
- **Gamma.app**, pitch decks and strategy storytelling for senior audiences

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, OpenShift, Argo Workflows, Dagster, dbt, DuckDB, Redpanda, Jenkins, Docker, GitOps pipelines, MicroStrategy, AngularJS, Ionic, CGM API integrations.

§ SIDE PROJECT

BACKTEST & AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal crypto-market infrastructure project combining a backtesting engine with an autonomous trading-agent framework.

- Builds and validates quantitative trading strategies against historical market data across centralised and decentralised venues.
 - Architecture uses a file-queue-based agent loop with modular strategy components, enabling rapid iteration without full redeployment.
 - Integrates market microstructure analytics including liquidation heatmaps and execution quality metrics from Coinglass and Hyblock Capital.
 - Directly relevant to Cint's agentic vision: demonstrates autonomous decision loops, data provenance discipline, and production-grade thinking applied outside a corporate environment.
-

§ HOW I WOULD WORK AT CINT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview Demand-side stakeholders, R&D leads, and commercial counterparts to map current Exchange routing logic, where agentic tooling is already prototyped, and where the biggest friction points sit between supply, demand, and data quality.

WEEK 2

Slice the opportunity.

Produce a structured opportunity assessment – backed by stakeholder interviews and whatever quantitative signals the Exchange already surfaces – to identify the highest-leverage agentic intervention for a first focused sprint.

WEEK 3+

Ship and align.

Author clear requirements for the first agentic Demand feature, partner with R&D to navigate technical trade-offs, and run the first cross-functional review with Commercial and Data Science to lock the go-to-market narrative.

I COVER LETTER

Dear Cint Product Team,

I am applying for the Senior Product Manager, Exchange AI role. The framing in your job description – "reshaping the Exchange around agentic delivery of insights" – is not a phrase most companies use accurately. The fact that Cint uses it as the organising principle of this role, rather than as marketing language, tells me the organisation has already done the hard conceptual work of understanding what agentic systems actually require: clear data provenance, disciplined routing logic, and product owners who can hold both the vision and the implementation detail simultaneously.

My most relevant recent work is the AI and data management platform I built as Product Manager at Rohde & Schwarz under the FCAS defence programme. The core challenge there was identical in structure to Cint's: take multimodal datasets flowing in from heterogeneous sources, impose quality, tagging, and reproducibility discipline, and make the result usable by downstream ML pipelines – with full audit trails so stakeholders across government and industry could trust the outputs. I delivered autonomous feature sets end-to-end, including a GitOps-based rollout that reduced deployment times from several days to under forty minutes. I also unblocked an infrastructure-level issue in OpenShift independently, shipping in one week a feature that had been blocked for over a year. I mention this not to catalogue heroics but to illustrate that I operate at the boundary between product and engineering, which is exactly where agentic platform work lives.

At the Federal Employment Agency I owned the Arbeitsmarktmonitor analytics platform, introducing Dagster for automated ETL pipelines and dbt for indicator generation, while also serving as Deputy IT Security Officer. The overlap with Cint's Exchange is structural: a high-frequency data system where quality, lineage, and governance are not optional layers but load-

bearing ones. At Emil Group I rebuilt delivery stability for a 17-person InsurTech team under client pressure, splitting it into focused Scrum units and recovering client trust through structured weekly product workshops. I know what it feels like to manage a complex stakeholder map across commercial, engineering, and legal counterparts simultaneously.

On the agentic side specifically: I have designed multi-agent orchestration workflows using n8n and file-queue-based agent loops, used Claude and GPT daily for specification and edge-case generation, and built a personal backtesting and trading-agent framework in my own time. I am not describing AI as a future capability – it is the way I work now.

Cint operates at a scale – 300 million respondents, 130 countries – where marginal improvements in Exchange intelligence compound across every transaction. That is the kind of leverage I find genuinely motivating, and the kind of problem I am equipped to work on from day one.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Manager with nearly ten years of experience owning complex data and platform products from discovery through production rollout. Specialised in AI systems, analytics platforms, and regulated environments where data quality, provenance, and automation are load-bearing requirements. Comfortable navigating incomplete requirements, shifting priorities, and multi-stakeholder environments across R&D, Data Science, Commercial, and Legal. Fluent in AI-native workflows and modern agentic tooling; delivers requirements and implementation support at the boundary between product and engineering.

§ CORE STRENGTHS

- Translating complex data workflows into structured, dev-ready requirements
- Agentic workflow design and multi-agent orchestration
- AI-native product execution: daily use of Claude, GPT, Copilot, Cursor
- Cross-functional alignment across R&D, Data Science, Commercial, Legal
- ETL and data platform product ownership with audit-trail discipline
- Delivery recovery: re-establishing sprint discipline and stakeholder trust

- Autonomous feature delivery end-to-end, including GitOps rollout
- Technical fluency across APIs, Kubernetes, Python, data pipelines
- Founder-level pragmatism, low ego, high agency

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Built a central AI and data management platform for multimodal datasets (image, audio, tabular) under the European defence programme FCAS, directly analogous to Cint's Exchange data quality and provenance requirements
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Improved data quality via filtering, tagging, and reproducible transformation pipelines with full data provenance and audit trails; enabled ML training on curated datasets with SafeAI and ExplainableAI evaluation concepts
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature blocked for over a year
- Led cross-functional team: architect, data scientists, backend and frontend engineers, QA, and multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned the Arbeitsmarktmonitor analytics platform for regional labour market and demographic data; introduced Dagster for automated ETL and indicator generation, directly transferable to Cint's programmatic data pipeline management
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Designed interactive dashboards, tables, and community features across a complex stakeholder landscape
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes; standardised CI/CD with full test integration

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week; managed stakeholder map across primary insurers, reinsurers, MGAs, brokers, and underwriters
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline by splitting a bloated 17-person team into focused Scrum units; reintroduced velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on a mobile-first pilot app for hospitals
- Integrated CGM interface into hospital information system workflows; managed legacy API complexity transparently with stakeholders
- Led a small cross-functional team under tight deadlines with strict focus on highest-leverage features

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner, Co-Founder

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; USP was two-minute setup requiring no technical knowledge
- Served as deputy IT security officer; presented product in English to international audiences

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments platform on a P2P backbone; owned full UX/UI design, PSP integration, and mobile app prototype
- Product later acquired and operated by Sparkasse

Product Owner

- Delivered secure data structures and identity management for RKI projects DIM and DESH under strict regulatory and data-governance requirements
