Dear Hiring Team at Next Ventures,

I am applying for the Senior Product Owner role in Berlin. With nearly ten years owning product backlogs and roadmaps across enterprise software, regulated platforms, and commercially focused digital services, I am confident I can step in and add value quickly – not after a long ramp-up.

The job description asks for someone who can translate customer, market, and business needs into a clear product vision while managing delivery across cross-functional teams. That is the core of what I have done across every role. At Emil Group, I took over an InsurTech B2B SaaS platform under significant delivery pressure – a prototype-stage environment where client trust had deteriorated. I restructured a bloated 17-person team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops to rebuild stakeholder confidence. The commercial outcome was measurable: senior developer attrition dropped from near-total to a single departure, and the platform regained credibility with primary insurers and reinsurers. At Rohde & Schwarz, I led a cross-functional team spanning architects, data scientists, backend and frontend engineers, and QA on a government defence programme – an environment where ambiguity is constant and the cost of miscommunication is high.

The posting mentions eCommerce experience as advantageous. My most direct exposure comes from AOK ITSCare, where I owned the migration of an internal webshop to Shopware. This included complex product catalogue integration, third-party API mapping, and the design of customisable approval policies – a genuinely technical migration with real commercial stakes for the insurance procurement workflow it supported. I also hold a logistics specialisation from my Diplom Wirtschaftsingenieur at TU Berlin, which gives me a structural understanding of supply chain and operations contexts that often underpin eCommerce platform decisions.

The role calls for confident decision-making in complex or ambiguous situations and transparent communication with both technical and non-technical audiences. I have served as deputy IT Security Officer, led infrastructure-level unblocking independently, and presented product strategy to multinational stakeholders under a European defence programme. At the Federal Employment Agency, I advanced the Arbeitsmarktmonitor analytics platform, introduced Dagster-based ETL automation, and managed major Kubernetes migrations – all while maintaining governance and data lineage standards. These experiences have sharpened my ability to hold a technical conversation with an engineer and a strategic one with a board-level stakeholder in the same afternoon.

I am Berlin-based, hold German and English at native and C2 level respectively, and am available within four weeks of an offer. I would be glad to discuss the role and how my experience maps to your current product priorities.

Best regards, *Philipp Hilbert*
