

Philipp Hilbert. *AI-native Product Manager for autonomous enterprise workflows.*

Positioning, ten years building complex B2B SaaS products, now pointing that depth at source-to-pay automation where LLMs replace human touchpoints.

§ WHY NOOXIT

Nooxit sits at the intersection of three things I have worked closest to: autonomous agent design, regulated enterprise workflows, and the hard problem of making LLMs behave reliably inside existing ERP ecosystems. The specific challenge named in the posting – maintaining processing accuracy under a one-second response time threshold – is exactly the kind of constraint that separates serious infrastructure products from demos, and I find it genuinely interesting. I have shipped into environments with comparable pressure, most recently a defence-grade AI data platform with multinational compliance requirements. *That is the kind of problem where rigorous product thinking actually matters.*

§ HONEST FRAMING

I have not worked directly inside a procurement or accounts-payable team, so I will arrive with workflow questions rather than answers on the first day. What I do bring is a proven pattern of absorbing complex operational domains quickly – healthcare, labour market analytics, insurance underwriting – and translating them into dev-ready requirements within weeks.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
 - **GPT**, research synthesis and stakeholder communication drafts
 - **GitHub Copilot**, in-repo code review and acceptance criteria validation
 - **Cursor / VSCode**, feature exploration alongside engineering
 - **Lovable**, rapid front-end prototyping for discovery sessions
 - **Framer**, design-heavy wireframes and clickable concepts
 - **n8n**, multi-agent workflow orchestration and automation
 - **Gamma.app**, structured product presentations and roadmap decks
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, GitOps pipelines, Dagster, dbt, DuckDB, Redpanda, Django, AngularJS, Ionic, MicroStrategy, Bitbucket, Git.

§ SIDE PROJECT

BACKTEST ENGINE & DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal infrastructure project building a crypto backtesting engine and autonomous dev-agent framework from scratch.

- Backtesting engine ingests historical market data and executes configurable strategy logic across multiple venues and timeframes.
- Built on a file-queue-based agent loop architecture; agents consume task files, execute, and emit results without a central orchestrator – same pattern useful for invoice and PO processing loops.
- Dev agent framework automates repetitive coding tasks using LLM calls chained through structured prompts and output validators.
- The agent-loop design transfers directly to the autonomous worker architecture Nooxit is building for source-to-pay.

§ HOW I WOULD WORK AT NOOXIT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the engineering team on an active agent loop, trace one full source-to-pay transaction end to end through the system, and identify where human exceptions still occur and why.

WEEK 2

Sharpen the failure map.

Run structured discovery sessions with one or two reference customers to validate where accuracy drops and what the one-second threshold costs them when it breaks.

WEEK 3+

Slice, ship, close.

Turn the highest-confidence discovery findings into scoped stories with clear acceptance criteria, enter the sprint cycle, and own the delivery loop through to rollout.

I COVER LETTER

Dear Nooxit team,

Source-to-pay automation is one of the few areas where LLMs can eliminate entire process steps rather than just accelerating them. The opportunity to own that product end-to-end – from intake to final payment, across SAP, Oracle, and Coupa integrations – is exactly the kind of scope I have been building toward.

My most recent role at Rohde & Schwarz was a government contract inside the European FCAS defence programme. I built and owned a central AI and data management platform for multimodal datasets, handling data transformation, provenance, audit trails, and SafeAI evaluation concepts. The stakeholders included multinational partners with strict compliance requirements, the tech stack ran on Kubernetes and OpenShift, and I was the sole person bridging engineering, data science, and programme governance. I delivered autonomous feature sets end-to-end – user stories through GitOps rollout – and reduced deployment times from several days to under forty minutes. That experience maps directly to what Nooxit needs: someone who can hold the technical depth and the regulatory rigour at the same time.

Before that, at Emil Group, I owned a B2B InsurTech SaaS platform serving primary insurers, reinsurers, MGAs, and brokers. I designed and delivered a Claims Center module from concept to production, rebuilt sprint discipline across a bloated seventeen-person team, and recovered client trust in a prototype-stage environment through structured communication and weekly workshops. The workflow complexity in insurance – policy issuance, underwriting rules, document management – is adjacent to what source-to-pay processing demands. Both domains penalise edge-case mishandling in real money.

At the Federal Employment Agency I served as Deputy IT Security Officer alongside my product role, managing compliance and data lineage across a public analytics platform. I mention this because regulatory awareness is not something I need to be taught – I have operated inside it, filed the reports, and designed systems that satisfy it.

I am a native German speaker, based in Berlin, and have worked with DACH enterprise customers throughout my career. The language and cultural context Nooxit needs for its German-speaking regulatory partners and DACH customer base is already here.

I would welcome a conversation about the specific accuracy and latency challenges you are solving today.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of B2B SaaS experience, specialising in complex operational workflows, AI systems, and regulated enterprise environments. Most recently built an AI data management platform for a multinational defence programme, owning the full delivery lifecycle from requirements through GitOps rollout. Background spans InsurTech, public sector analytics, healthcare, and founder-level company building. Comfortable holding technical depth and cross-functional alignment simultaneously, and effective in environments where requirements are incomplete and delivery pressure is real.

§ CORE STRENGTHS

- End-to-end product ownership in regulated, high-complexity B2B environments
- AI and LLM product design, agentic workflow architecture

- ERP and enterprise system integration (APIs, data pipelines, audit trails)
- Translating operational workflows into dev-ready requirements
- Cross-functional delivery leadership across engineering, QA, data science, compliance
- Sprint discipline recovery and backlog management under pressure
- Stakeholder trust building with enterprise reference customers
- Technical fluency across modern cloud-native stacks
- German-native, English C2, DACH enterprise experience

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned the product for a central AI and data management platform under the FCAS European defence programme, handling multimodal datasets with strict provenance and audit requirements
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Implemented SafeAI and ExplainableAI evaluation concepts for ML training and model auditability
- Unblocked infrastructure-level OpenShift issues independently; delivered a feature the project lead had requested from engineers for over a year – completed in one week
- Led a cross-functional team spanning architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor, an analytics platform for regional labour market and demographic data
- Introduced Dagster for automated ETL and indicator generation, replacing manual pipeline work
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time

- Delivered labour shortage analytics, flexible regional comparison, and modernised admin tooling

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week, serving primary insurers, reinsurers, MGAs, brokers, and underwriters
- Designed and delivered a Claims Center module from concept to production rollout
- Split a bloated 17-person team into focused Scrum units; reintroduced velocity tracking and structured refinement practices
- Recovered client trust in a prototype-stage environment through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical constraints including legacy APIs and external database dependencies

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Co-founded and owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for setup under two minutes with no technical knowledge required; served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone, covering PSP integration, full UX/UI design, and a mobile app prototype

- Later acquired and operated by Sparkasse

AOK HEALTH INSURANCE / ITSCARE 2019, 2020

Proxy Product Owner

- Migrated an internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies
