Dear Nooxit team,

Source-to-pay automation is one of the few areas where LLMs can eliminate entire process steps rather than just accelerating them. The opportunity to own that product end-to-end – from intake to final payment, across SAP, Oracle, and Coupa integrations – is exactly the kind of scope I have been building toward.

My most recent role at Rohde & Schwarz was a government contract inside the European FCAS defence programme. I built and owned a central AI and data management platform for multimodal datasets, handling data transformation, provenance, audit trails, and SafeAI evaluation concepts. The stakeholders included multinational partners with strict compliance requirements, the tech stack ran on Kubernetes and OpenShift, and I was the sole person bridging engineering, data science, and programme governance. I delivered autonomous feature sets end-to-end – user stories through GitOps rollout – and reduced deployment times from several days to under forty minutes. That experience maps directly to what Nooxit needs: someone who can hold the technical depth and the regulatory rigour at the same time.

Before that, at Emil Group, I owned a B2B InsurTech SaaS platform serving primary insurers, reinsurers, MGAs, and brokers. I designed and delivered a Claims Center module from concept to production, rebuilt sprint discipline across a bloated seventeen-person team, and recovered client trust in a prototype-stage environment through structured communication and weekly workshops. The workflow complexity in insurance – policy issuance, underwriting rules, document management – is adjacent to what source-to-pay processing demands. Both domains penalise edge-case mishandling in real money.

At the Federal Employment Agency I served as Deputy IT Security Officer alongside my product role, managing compliance and data lineage across a public analytics platform. I mention this because regulatory awareness is not something I need to be taught – I have operated inside it, filed the reports, and designed systems that satisfy it.

I am a native German speaker, based in Berlin, and have worked with DACH enterprise customers throughout my career. The language and cultural context Nooxit needs for its German-speaking regulatory partners and DACH customer base is already here.

I would welcome a conversation about the specific accuracy and latency challenges you are solving today.

Best regards, *Philipp Hilbert*
