## § WHY SHYFTPLAN

shyftplan sits at the intersection of two things I find genuinely hard: modelling real-time operational constraints and building software that factory workers and planners actually trust enough to rely on in production. The job description mentions dynamic adjustment to employee absences in real time — that is precisely the class of problem where product instincts alone are insufficient and you need someone who can sit with engineers and trace the edge cases in the data model. Reporting directly to the CEO in a category-defining B2B SaaS company, with full product-area ownership, is the kind of mandate I have been building toward. *That is exactly the environment where my strengths compound.*

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, discovery synthesis and spec drafting
- **GPT**, stakeholder narrative and edge-case generation
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, code-level product validation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy concept communication
- **Gamma.app**, roadmap and stakeholder presentations

- **n8n**, workflow automation and agentic pipeline design

---

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Python, Django, JavaScript, Kotlin (Spring Boot), PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Dagster, dbt, DuckDB, REST APIs, Redpanda, Bitbucket, Git, Jira, AngularJS, Ionic, MicroStrategy.

---

## § SIDE PROJECT

BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

*Self-built backtesting and algorithmic decision framework for crypto market strategies.*

- Implements execution-quality analytics drawing on liquidation heatmaps and market microstructure data from Coinglass and Hyblock Capital.
- Designed around a file-queue-based agent loop for reproducible strategy runs, mirroring the ETL pipeline patterns I have used on production data platforms.
- Developed in parallel with a custom dev-agent framework, demonstrating autonomous end-to-end delivery habits.
- Relevant here because product managers who can read their own architecture traces write better acceptance criteria and spot feasibility risks before sprint planning.

---

## § HOW I WOULD WORK AT SHYFTPLAN

*First weeks, concrete.*

### WEEK 1

**Listen, map, find the gaps.**

Shadow account managers and support on live customer escalations, review the existing roadmap and backlog in Jira, and conduct at least three structured customer conversations focused on scheduling edge cases and absence handling – the specific pain points named in the job description.

## WEEK 2

### Slice and prioritise.

Translate the raw input from week one into a prioritised problem map, identify the one area where a well-scoped sprint deliverable would produce the fastest demonstrable customer impact, and align that framing with the CEO and engineering lead.

## WEEK 3+

### Ship and close loops.

Take product ownership of the first sprint cycle, run structured refinement with engineers, hold the acceptance bar, and deliver a retrospective that connects sprint outcomes back to the customer problems identified in week one.

---

## *I* COVER LETTER

Dear shyftplan team,

I am a Berlin-based Senior Product Manager with six years of B2B SaaS experience and a background in industrial engineering from the TU Berlin, where my first master's-phase specialisation was logistics and operations. When I read shyftplan's description – automating complex shift planning, estimating workforce and qualification demand, adjusting dynamically to real-time absences – I recognised problems I understand at a structural level, not just as product abstractions.

My most directly relevant experience is at Emil Group, where I owned the full InsurTech SaaS platform covering product configuration, underwriting, policy issuance, and workflow automation for primary insurers, reinsurers, MGAs, and brokers. The operational workflows were dense, the stakeholder set was heterogeneous, and the delivery environment had deteriorated: a 17-person team without sprint discipline, no velocity tracking, and near-total senior developer attrition. I split the team into smaller Scrum units, reintroduced structured refinement, and rebuilt client trust through weekly product workshops. That combination – workflow ownership, agile restoration, and stakeholder credibility – is the profile you are describing for this role.

At Rohde & Schwarz I operated inside a government defence programme (FCAS) where the product was an AI and data management platform for multimodal datasets. I delivered feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout. I reduced deployment times from several days to under forty minutes by introducing ArgoCD, and I unblocked an infrastructure-level problem independently that had been stalled for over a year. The habit of going deep enough to unblock engineering is one I carry into every product role.

At the Federal Employment Agency I served simultaneously as Product Manager and Deputy IT Security Officer, which meant keeping delivery velocity high while maintaining compliance, data lineage, and governance standards. I introduced Dagster for automated ETL pipelines and migrated the platform to Kubernetes. I mention this because shyftplan's product – workforce scheduling for industrial clients – sits in a domain where data accuracy and auditability are not optional extras. The skills transfer directly.

I am already in Berlin and interested in the on-site collaborative environment you describe in Kreuzberg. I would welcome the opportunity to speak with you about the specific product area you would assign and the current state of the roadmap.

Best regards, *Philipp Hilbert*

---

## **II** CURRICULUM VITAE

---

### § BEARING

Senior Product Manager with six years of B2B SaaS experience and a decade of overall product delivery across regulated environments, analytics platforms, AI systems, and operational workflow software. Trained as an industrial engineer at the TU Berlin with a specialisation in logistics and operations – a direct match for the domain shyftplan operates in. Comfortable holding full product-area responsibility, running sprint cycles with engineering, and conducting qualitative and quantitative customer research. Fluent in Jira-based backlog management, structured refinement, and cross-functional stakeholder alignment from development to sales to enterprise account management.

---

### § CORE STRENGTHS

- Full product-area ownership in B2B SaaS environments
- Operational workflow mapping to dev-ready requirements
- Sprint discipline restoration and velocity tracking
- Qualitative customer research and JTBD-style discovery
- Cross-functional alignment: engineering, design, sales, AM
- Enterprise stakeholder communication in German and English
- AI-native execution and rapid prototyping
- Agile team structuring and backlog management

- Technical fluency across modern SaaS infrastructure

---

## § PROFESSIONAL EXPERIENCE

### EMIL GROUP 2022

#### *Product Manager, InsurTech SaaS Platform*

- Owned end-to-end delivery of a B2B SaaS platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters, reducing insurance product time-to-market from over one year to under one week.
- Designed and delivered a Claims Center module from concept to production rollout.
- Restored sprint discipline and delivery stability: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and reduced senior developer attrition from near-total to a single departure.
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops.
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation.

### ROHDE & SCHWARZ 2024, 2025

#### *Product Manager, AI Data Transformation*

- Owned a product area within the European defence programme FCAS: a central AI and data management platform for multimodal datasets.
- Delivered autonomous feature sets end-to-end including user stories, acceptance criteria, implementation, testing, and GitOps-based rollout.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA.
- Unblocked an infrastructure-level problem independently that engineering had not resolved in over a year, delivering the feature in one week.

### FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

#### *Product Manager, Public Data Analytics*

- Advanced the Arbeitsmarktmonitor analytics platform for regional labour market and demographic data, delivering labour shortage analytics, regional comparison tools, and modernised admin tooling.

- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time.
- Served concurrently as Deputy IT Security Officer with focus on compliance, governance, and data lineage.
- Migrated legacy systems to Kubernetes and managed major system upgrades.

## CLINET PLATFORMS 2021, 2022

### *Product Owner, Mobile Healthcare App*

- Delivered a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage.
- Integrated CGM interface into hospital information system workflows.
- Built stakeholder trust through transparent communication of technical constraints involving legacy APIs and external databases.

---

## § FOUNDER & EARLY-STAGE EXPERIENCE

- **Qcrypt AG (2016–2018), Product Owner:** Quantum-secure encryption product based on one-time-pad keys and true-RNG hardware. Owned backup, restore/checkpoint, and data-encryption product architecture. Also served as deputy IT security officer.
- **Kvitt Payment Solutions (2013–2018), Founder & CFO:** Group-based P2P payments on a P2P backbone. PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
- **AOK Health Insurance ITSCare (2019–2020), Proxy Product Owner:** Migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies.
- **Bundesdruckerei – COVID-19 Data Platform (2021), Product Owner:** RKI projects DIM and DESH. Secure data structures and identity management.
- **Smart Soil Technologies (2016–2021), Co-Founder / CDO / CFO:** Intelligent fertiliser and substrate solutions for vertical indoor farming. Establishment of digital tooling, financial and investment planning, HR.
