

# Philipp Hilbert. *Logistics-domain PM with a decade of cross-functional delivery.*

*Positioning*, hands-on PM with operational workflow depth, Agile delivery track record, and logistics academic grounding – ready to own AUTO1's logistics engine end-to-end.

## § WHY AUTO1

AUTO1 built one of Europe's most scaled used-car platforms on the back of genuine operational complexity – the logistics engine connecting buyers, sellers, and transport across borders is not a nice-to-have but a core competitive asset. The job description signals that this team is ready to accelerate: full lifecycle ownership, cross-functional squads, and measurable business impact are exactly the working mode I default to. What draws me specifically is the mandate to close the gap between business processes and the engineering teams building the software that runs them – that is the precise gap I have been hired to close in every role I have held. *That is exactly the environment where my strengths compound.*

---

## § HONEST FRAMING

I have not held a dedicated logistics PM role in industry, though my Master's specialisation at TU Berlin was logistics and my current experience maps closely: complex operational workflows, distributed stakeholders, and software systems that orchestrate physical processes at scale. The transferable mechanic I am strongest in is exactly this: taking a poorly documented, multi-stakeholder operational process and turning it into dev-ready requirements that a Scrum team can execute without ambiguity.

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, requirements drafting and edge-case generation
- **GPT**, stakeholder communication and spec review
- **GitHub Copilot**, in-repo feature support
- **Cursor / VSCode**, exploratory coding and acceptance criteria validation
- **Lovable**, rapid UI prototyping before engineering investment
- **Gamma.app**, stakeholder presentation and roadmap communication
- **n8n**, workflow automation and agentic loop design
- **Framer**, design-heavy prototype work

---

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Python, Kotlin (Spring Boot), PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Dagster, dbt, DuckDB, Django, JavaScript, AngularJS, Ionic, REST APIs, Redpanda, MicroStrategy, Bitbucket, Git.

---

## § SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

*Personal infrastructure project building a systematic backtesting and market-analysis stack for crypto markets.*

- Ingests trade history and order book data from centralised and decentralised venues including Hyperliquid and Bitget.
- Built on a file-queue-based agent loop with modular strategy execution and position tracking.
- Integrates liquidation heatmap data from Coinglass and Hyblock Capital for microstructure-aware signal design.
- Demonstrates the same data pipeline and instrumentation thinking directly applicable to monitoring a logistics engine's operational KPIs.

---

## § HOW I WOULD WORK AT AUTO1

*First weeks, concrete.*

### WEEK 1

#### **Listen, map, find the gaps.**

Shadow the logistics operations team and engineering leads to map the current state of the logistics engine – where handoffs break, where data is trusted, and where the backlog is contested.

### WEEK 2

#### **Prioritise with data.**

Instrument one or two high-friction process steps with concrete metrics, align with the team on a shared prioritisation lens, and cut the first slice of the backlog down to genuinely executable items.

### WEEK 3+

#### **Ship, close loops.**

Drive the first sprint to a clean release, establish a lightweight rollout and adoption feedback loop, and begin socialising the roadmap with cross-European stakeholders.

---

## **I** COVER LETTER

Dear Marija, dear AUTO1 hiring team,

I am applying for the Product Manager, Logistics role. My interest is grounded in a specific overlap: your logistics engine is a software system that has to model a physical, time-sensitive, multi-party process with full transparency – and that is precisely the class of problem I have spent the last several years solving as a PM. At Rohde & Schwarz I owned a data management platform built under a European defence programme, where the stakes of incorrect data lineage were compliance and safety failures, not missed deliveries. At the Federal Employment Agency I owned an analytics platform processing regional labour market data for public-sector stakeholders distributed across Germany. In both cases the challenge was the same: operational complexity that outpaced the documentation, and engineering teams that needed a PM to bridge the gap between what the business actually needed and what could be built.

What I find technically compelling about the AUTO1 logistics engine specifically is that it sits at the intersection of fleet-level coordination, third-party transport partners, and customer-facing

delivery promises. That architecture produces a particular class of product challenge – distributed state, async updates, fallback handling, and SLA traceability – that I genuinely enjoy working in. My Master's specialisation at TU Berlin was logistics, covering supply chain, operations, and transport systems, so I come to the domain with conceptual vocabulary, not just analogies from adjacent fields.

On the delivery side: at Emil Group I inherited a 17-person Scrum team that had lost sprint discipline under prolonged delivery pressure. I split it into smaller, clearly scoped units, reintroduced velocity tracking and structured refinement, and recovered client trust through weekly product workshops and honest communication about technical complexity. The situation required diagnosis before action, and the willingness to restructure rather than optimise what was not working. I expect a similar discipline to matter inside a logistics PM role at scale – the temptation to patch a backlog is always easier than restructuring how work gets refined.

I am comfortable working with complex data models and making trade-offs between technical debt and feature delivery. At the Federal Employment Agency I served as Deputy IT Security Officer alongside my PM duties, which required me to understand compliance requirements deeply enough to make informed product decisions rather than defer every question to legal. I have shipped production work in Kubernetes-based environments, introduced GitOps tooling that reduced deployment times from days to under an hour, and written acceptance criteria tight enough that engineers could build without back-and-forth on ambiguity.

I would be glad to talk through how my experience maps to the specific problems your logistics team is working on. I am based in Berlin, available on four weeks' notice, and authorised to work in Germany and the EU without sponsorship.

Best regards, *Philipp Hilbert*

---

## II CURRICULUM VITAE

---

### § BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into scalable software systems. Delivered across AI data platforms, public-sector analytics, InsurTech SaaS, and healthcare mobile apps. Master's specialisation in logistics at TU Berlin. Comfortable with full product lifecycle ownership in Agile environments: from requirement gathering and stakeholder alignment through sprint execution, rollout, and adoption. Technically fluent enough to unblock engineering teams, low-ego enough to do the unglamorous work of keeping a backlog honest.

---

## § CORE STRENGTHS

- Translating operational workflows into dev-ready requirements
- Full product lifecycle ownership in Agile environments
- Cross-functional alignment across business, engineering, and operations
- Data-driven prioritisation and hypothesis-driven experimentation
- Sprint discipline recovery and team restructuring
- Stakeholder communication for technical and non-technical audiences
- KPI-oriented product thinking and roadmap definition
- Technical fluency across modern backend and data infrastructure
- Logistics domain grounding (academic and transferable industry practice)

---

## § PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

*Product Manager, AI Data Transformation*

- Delivered autonomous feature sets end-to-end including user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across a multinational stakeholder environment
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting for over a year
- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI)

*Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift*

---

## FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

### *Product Manager, Public Data Analytics*

- Owned roadmap and delivery for the Arbeitsmarktmonitor, a regional labour market analytics platform with distributed public-sector stakeholders
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Designed interactive dashboards and community features; introduced Dagster for automated ETL and indicator generation
- Managed major system migrations to Kubernetes and standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

*Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git*

---

## EMIL GROUP 2022, 2022

### *Product Manager, InsurTech SaaS Platform*

- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

*Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs*

---

## CLINET PLATFORMS 2021, 2022

### *Product Owner, Mobile Healthcare App*

- Delivered core patient flows including digital anamnesis, meal and therapy plans, transport, chat, and document storage across iOS and Android
- Led a small team under tight deadlines with strict focus on the highest-leverage features
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases

- Integrated CGM interface into hospital information system workflows

*Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration*

---

## § FOUNDER & EARLY-STAGE EXPERIENCE

### QCRYPT AG 2016, 2018

#### *Product Owner*

- Owned backup, restore/checkpoint, and data-encryption product architecture for a quantum-secure one-time-pad encryption product
- Served as deputy IT security officer; delivered a setup experience requiring under two minutes with no technical knowledge required

### KVITT PAYMENT SOLUTIONS 2013, 2018

#### *Founder & CFO*

- Built group-based P2P payments product from concept through mobile prototype, including PSP integration and full UX/UI design
- Product later acquired and operated by Sparkasse

### AOK HEALTH INSURANCE – ITSCARE 2019, 2020

#### *Proxy Product Owner*

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
