

Philipp Hilbert. *Senior Product Manager turning early traction into scalable platforms.*

Positioning, B2B SaaS operator with 10 years owning complex product delivery from 0→1, now ready to scale Wemolo's new product line.

§ WHY WEMOLO

Wemolo's stated challenge is precise: early wins exist, the concept phase is done, and the job now is converting that traction into a repeatable, scalable product with defensible commercial logic. That is the exact problem I have solved before – at Emil Group, where I inherited a prototype-stage InsurTech platform, rebuilt sprint discipline from the ground up, and delivered a full Claims Center module from concept to production. The emphasis on ICP definition, value proposition sharpening, and tight collaboration between Product, Commercial, and Engineering maps directly to how I work. Parking operations may be a new vertical for me, but the mechanics of B2B SaaS scaling are not. *That combination of commercial instinct and delivery ownership is where I am most useful.*

§ HONEST FRAMING

I have no direct career experience in parking or mobility infrastructure, and I want to name that plainly. What I do bring is a consistent track record of learning domain specifics quickly through structured customer discovery – at Emil Group I had zero InsurTech background and was running productive client workshops within weeks. The transferable mechanic is the same: map the operational workflow, find the recurring pain patterns, and build against those rather than against one-off requests.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, product spec drafting and edge-case generation
 - **GPT**, market research synthesis and stakeholder communication
 - **Cursor / VSCode**, in-repo feature work and acceptance criteria review
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy concept validation
 - **Gamma.app**, stakeholder and pitch decks
 - **n8n**, agentic workflow automation
 - **GitHub Copilot**, delivery support and PR review
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Production work spans Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, Django, AngularJS, REST APIs, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Redpanda, Bitbucket, and GitOps pipelines – across defence, public sector analytics, InsurTech, and healthcare software.

§ HOW I WOULD WORK AT WEMOLO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow Commercial and Operations conversations with existing customers to map the recurring pain patterns that drove early traction, and identify which current workarounds signal real product demand versus one-off requests.

WEEK 2

Sharpen the ICP.

Run structured discovery sessions with the five to ten most representative early customers to pressure-test the value proposition and surface the criteria that predict successful deployment versus difficult onboarding.

WEEK 3+

Standardise and ship.

Translate validated patterns into a prioritised roadmap of scalable features, align Engineering and Commercial on the first milestone, and establish the KPIs that will tell us whether we are building something repeatable or drifting toward bespoke.

I COVER LETTER

Dear Wemolo team,

I am applying for the Senior Product Manager role on your new product line. The specific framing in your posting – concept phase complete, first wins in hand, now the work is making it repeatable and scalable – is exactly the stage I find most interesting and where my experience is most concentrated.

At Emil Group, I joined a B2B InsurTech platform that had strong technology ambitions but was losing client trust, burning through developers, and shipping inconsistently. Within the first weeks I rebuilt sprint cadence, split a bloated 17-person team into focused Scrum units, and reintroduced structured refinement. Within months I had delivered a full Claims Center module from concept to production rollout and reduced senior developer attrition from near-total to a single departure. The underlying problem was the same one Wemolo is describing: early-stage products accumulate individual client accommodations that look like progress but quietly erode long-term product health. My job was to stop that pattern and build toward something that could scale.

At Rohde & Schwarz I owned a government AI data platform as the sole PM on a programme where requirements were technically complex, multinational stakeholders had competing priorities, and infrastructure blockers had been stalled for over a year. I unblocked one such blocker independently in a week and reduced deployment times from several days to under 40 minutes by introducing GitOps with ArgoCD. That technical fluency matters when you describe a role at the intersection of software, operations, and hardware-supported systems – I am comfortable having the real trade-off conversation with engineers rather than a surface-level one.

On the commercial side: at the Federal Employment Agency I worked directly with regional government stakeholders to translate analytical needs into product decisions, and at Emil Group I ran weekly product workshops with insurance clients to rebuild trust during a difficult delivery period. I am comfortable holding the tension between what customers ask for and what the product actually needs to become.

I am native German and fluent in English, and I am open to relocating within Germany including to Munich. I would welcome the chance to talk through how my background maps to the specific product area you are building.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Manager with nearly ten years of experience taking complex B2B software from early-stage traction to scalable, commercially grounded products. Track record spans InsurTech, public-sector analytics, and defence AI platforms – consistently in environments where requirements are incomplete, stakeholders are multiple, and delivery discipline has to be built or rebuilt from the ground up. Equally comfortable defining ICP and value proposition with Commercial teams and unblocking infrastructure-level issues with Engineering. Fluent in AI-native product workflows and capable of autonomous end-to-end feature delivery when needed.

§ CORE STRENGTHS

- 0→1 product development in B2B SaaS and platform environments
- ICP definition, value proposition sharpening, and commercial roadmap alignment
- Translating messy operational workflows into scalable, dev-ready requirements
- Discovery and validation with direct customer contact
- Preventing one-off client requests from fragmenting long-term product health
- Cross-functional alignment across Engineering, Commercial, and Operations
- Sprint discipline, backlog management, and delivery ownership
- Technical fluency: meaningful trade-off conversations with engineers
- German native; natural customer communication in DACH markets

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module end-to-end, from concept to production rollout
- Rebuilt delivery stability: split a bloated 17-person team into focused Scrum units and reintroduced velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned end-to-end feature delivery including user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked an infrastructure-level OpenShift issue independently; delivered in one week what engineering had been unable to ship for over a year
- Led a cross-functional team spanning architect, data scientists, backend and frontend engineers, and QA
- Responsible for data transformation, transparency, and auditability with multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage indicators, flexible regional comparison tooling, and modernised admin workflows
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual pipelines
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity around legacy APIs and external databases

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Qcrypt AG (2016–2018), Product Owner:** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware. Setup under two minutes, no technical knowledge required. Deputy IT security officer. Promoted the product to international audiences in English.
- **Kvitt Payment Solutions (2013–2018), Founder & CFO:** Group-based P2P payments on a P2P backbone. PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
- **Proxy Product Owner, AOK Health Insurance / ITSCare (2019–2020):** Migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policies.
- **COVID-19 Data Platform, Bundesdruckerei (2021):** RKI projects DIM and DESH. Secure data structures and identity management.
- **Smart Soil Technologies (2016–2021), Co-Founder / CDO / CFO:** Intelligent fertiliser and substrate solutions for vertical indoor farming. Digital tooling, financial planning, investor relations.
