Dear Wemolo team,

I am applying for the Senior Product Manager role on your new product line. The specific framing in your posting – concept phase complete, first wins in hand, now the work is making it repeatable and scalable – is exactly the stage I find most interesting and where my experience is most concentrated.

At Emil Group, I joined a B2B InsurTech platform that had strong technology ambitions but was losing client trust, burning through developers, and shipping inconsistently. Within the first weeks I rebuilt sprint cadence, split a bloated 17-person team into focused Scrum units, and reintroduced structured refinement. Within months I had delivered a full Claims Center module from concept to production rollout and reduced senior developer attrition from near-total to a single departure. The underlying problem was the same one Wemolo is describing: early-stage products accumulate individual client accommodations that look like progress but quietly erode long-term product health. My job was to stop that pattern and build toward something that could scale.

At Rohde & Schwarz I owned a government AI data platform as the sole PM on a programme where requirements were technically complex, multinational stakeholders had competing priorities, and infrastructure blockers had been stalled for over a year. I unblocked one such blocker independently in a week and reduced deployment times from several days to under 40 minutes by introducing GitOps with ArgoCD. That technical fluency matters when you describe a role at the intersection of software, operations, and hardware-supported systems – I am comfortable having the real trade-off conversation with engineers rather than a surface-level one.

On the commercial side: at the Federal Employment Agency I worked directly with regional government stakeholders to translate analytical needs into product decisions, and at Emil Group

I ran weekly product workshops with insurance clients to rebuild trust during a difficult delivery period. I am comfortable holding the tension between what customers ask for and what the product actually needs to become.

I am native German and fluent in English, and I am open to relocating within Germany including to Munich. I would welcome the chance to talk through how my background maps to the specific product area you are building.

Best regards, *Philipp Hilbert*
