

# Philipp Hilbert. *Regulatory technology product operator, precision-delivery focus.*

*Positioning*, product manager who turns complex regulatory requirements into dev-ready specs and shipped data engineering solutions, fast.

## § WHY SCALABLE CAPITAL

Scalable Capital is building a vertically integrated investment and banking platform at scale, where regulatory technology is not a back-office afterthought but a critical infrastructure layer with direct business impact. The posting is explicit that the PM must own a technical roadmap on top of a data lake and work hand-in-hand with a large data engineering team – exactly the combination of structured requirements work and data platform ownership I have done at Rohde & Schwarz and the Federal Employment Agency. The mandate to dissect incoming regulatory requirements into actionable engineering specs, while driving execution velocity, matches my operating mode precisely. *That is exactly the environment where precision and speed compound rather than trade off against each other.*

---

## § HONEST FRAMING

I have not held a dedicated AML or financial regulatory reporting role, so the precise vocabulary of your control functions – transaction monitoring thresholds, EMIR reporting fields, MiFID II golden source attributes – is something I will absorb in the first weeks rather than bring on day one. What I do bring is a demonstrated pattern of taking unfamiliar, high-stakes compliance domains (FCAS defence data governance, public-sector data lineage, COVID-19 identity management) and converting them into engineered, auditable systems under delivery pressure.

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude**, requirements synthesis and edge-case generation
- **GPT**, stakeholder document drafting and spec review
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, AI-assisted codebase navigation and refactoring
- **Lovable**, rapid front-end prototyping for stakeholder validation
- **Gamma.app**, structured workshop and roadmap presentations
- **n8n**, agentic workflow automation and process mapping
- **Framer**, design-heavy prototype work

---

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Shipped production work with Python, Kotlin (Spring Boot), PostgreSQL, MongoDB, JavaScript, Django, REST APIs, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, MicroStrategy, Redpanda, and low-code insurance platform tooling; data platform work spans ETL pipeline design, data lake architecture, audit trails, and reproducible transformation pipelines.

---

## § SIDE PROJECT

CRYPTO BACKTESTING & AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

*Personal infrastructure for algorithmic crypto research and agentic trading automation.*

- Builds a backtesting engine for crypto markets with support for perpetual futures, spot, and cross-venue execution simulation.
- Architecture uses file-queue-based agent loops and multi-agent orchestration, drawing on hands-on experience with Hyperliquid, Jupiter, and 1inch aggregation.
- Incorporates liquidation heatmap analysis via Coinglass and Hyblock Capital data feeds alongside custom market microstructure metrics.
- Demonstrates the same data pipeline design and agentic workflow thinking directly applicable to Scalable's regulatory data architecture.

---

## § HOW I WOULD WORK AT SCALABLE CAPITAL

*First weeks, concrete.*

### WEEK 1

#### **Listen, map, find the gaps.**

Shadow each control function – AML, Finance, Compliance, Financial Risk – to map current workflows, pain points, and the open regulatory items already known to the team, and locate where requirements are underspecified or stalled.

### WEEK 2

#### **Synthesise, spec, prioritise.**

Take the two or three highest-priority open items and produce fully actionable technical specifications with clear acceptance criteria, ready for the data engineering team to kick off without further clarification loops.

### WEEK 3+

#### **Ship, close, iterate.**

Drive the first milestone to production, establish a lightweight milestone-steering cadence with control function owners, and begin building the forward roadmap for the next regulatory deadline.

---

## **I** COVER LETTER

Dear Scalable Capital team,

Regulatory technology product management sits at an unusual intersection: you need someone who can sit with a compliance officer, understand what an upcoming regulation actually requires, and then immediately turn that understanding into a spec a data engineer can act on. That translation layer – from regulatory intent to technical implementation – is where I have spent the last several years, across government defence programmes, public data platforms, and B2B SaaS environments.

At Rohde & Schwarz, I delivered a central AI data management platform for the FCAS defence programme, where data provenance, audit trails, and governance were non-negotiable requirements set by multinational stakeholders with no tolerance for ambiguity. I owned the entire product cycle: from eliciting requirements across architects, data scientists, and compliance-adjacent stakeholders, through writing the acceptance criteria, to GitOps-based

rollout. When the project was stalled by an infrastructure blocker that engineers had not resolved in months, I unblocked it independently and delivered the feature in one week. That combination of structured requirements work and hands-on delivery is what I would bring to your regulatory data architecture.

At the Federal Employment Agency, I served as Deputy IT Security Officer while also owning the data platform product. I introduced Dagster for automated ETL and indicator pipelines, migrated legacy systems to Kubernetes, and standardised data lineage practices. Working across compliance, engineering, and operations simultaneously is the normal operating mode I am accustomed to – not an edge case.

Your posting specifically values execution speed alongside diligence, which is a real tension that most organisations resolve in one direction or the other. My approach is to invest heavily in requirements quality upfront – structured discovery sessions, precise acceptance criteria, explicit edge cases – so that engineering can move fast without rework. At Emil Group, this approach re-established delivery stability for a team that had lost both velocity and client trust, and reduced senior developer attrition from near-total to a single departure.

I am a German native speaker, based in Berlin, and open to relocating to Munich. I understand Scalable Capital's platform across Broker, Wealth, Credit, and Banking well enough to know that the regulatory surface area is genuinely complex and consequential. I would welcome a conversation about how the role is currently structured and where the biggest open items are.

Best regards, *Philipp Hilbert*

---

## **II** CURRICULUM VITAE

---

### § BEARING

Product Manager with nearly ten years of experience owning complex technical domains across regulated, data-heavy environments. At Rohde & Schwarz, delivered a data governance and AI management platform for a European defence programme, handling audit trails, provenance, and multinational compliance requirements end-to-end. At the Federal Employment Agency, owned a public data analytics platform while serving as Deputy IT Security Officer, introducing automated ETL pipelines and Kubernetes-based infrastructure. Combines structured requirements engineering with direct engineering collaboration and strong delivery ownership, operating effectively under ambiguity and time pressure. AI-native across the full product workflow.

---

## § CORE STRENGTHS

- Translating regulatory requirements into actionable engineering specifications
- Data platform product ownership: ETL, data lake, audit trails, lineage
- Cross-functional stakeholder alignment across compliance, engineering, and operations
- End-to-end delivery ownership, milestone steering, backlog management
- Technical fluency sufficient for independent problem-solving alongside data engineers
- AI-native product execution and rapid prototyping
- Agile process discipline: sprint restructuring, velocity recovery, refinement practices
- Governance and compliance product design in regulated environments
- Founder-level pragmatism, low ego, high agency

---

## § PROFESSIONAL EXPERIENCE

### ROHDE & SCHWARZ 2024, 2025

#### *Product Manager, AI Data Transformation*

- Owned data provenance, audit trails, and governance for a multinational AI data platform under FCAS defence programme requirements
- Delivered requirements end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked a year-long infrastructure stall in OpenShift independently; delivered in one week
- Led cross-functional team spanning architect, data scientists, backend and frontend engineers, and QA
- Responsible for data transformation transparency and auditability with multinational compliance stakeholders

### FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

#### *Product Manager, Public Data Analytics*

- Introduced Dagster for automated ETL and indicator generation on a regional labour market data platform
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and managed major system upgrades

- Standardised CI/CD with full test integration; designed interactive dashboards and admin tooling
- Delivered labour shortage analytics and flexible regional comparison features

#### EMIL GROUP 2022, 2022

##### *Product Manager, InsurTech SaaS Platform*

- Designed and delivered a Claims Center module from concept to production rollout in a B2B regulated insurance platform
- Re-established sprint discipline: split a 17-person team into effective Scrum units, introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Regained client trust in a prototype-stage environment through weekly product workshops and structured communication
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

#### CLINET PLATFORMS 2021, 2022

##### *Product Owner, Mobile Healthcare App*

- Delivered core flows for digital anamnesis, patient document storage, and CGM hospital information system integration
- Built stakeholder trust through transparent communication of legacy API and external database constraints
- Led a small team under tight deadlines with strict focus on the highest-leverage features

---

#### § FOUNDER & EARLY-STAGE EXPERIENCE

#### QCRYPT AG 2016, 2018

##### *Product Owner*

- Owned product architecture for quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- USP: setup under two minutes, no technical knowledge required; served as deputy IT security officer

## KVITT PAYMENT SOLUTIONS 2013, 2018

### *Founder & CFO*

- Built group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

## BUNDESDRUCKEREI – COVID-19 DATA PLATFORM 2021, 2021

### *Product Owner*

- Delivered RKI projects DIM and DESH: secure data structures and identity management under public health compliance requirements
