Dear Assecor team,

The formula in your posting – "As a Product Owner I want to work in a great team in order to get the best out of myself and the others" – is a good shorthand for what the role actually demands: the ability to hold client intent and engineering reality in the same head, and to translate between the two without information loss. That is the work I have been doing for the past ten years across defence, public sector, InsurTech, healthcare, and early-stage ventures.

At Emil Group, I joined a B2B InsurTech platform where sprint discipline had collapsed under delivery pressure. A 17-person team was operating without clear ownership, velocity tracking had been abandoned, and client trust was deteriorating. I split the team into smaller Scrum units, reintroduced structured refinement and velocity tracking, rebuilt a weekly workshop cadence with clients, and delivered the Claims Center module from concept to production. Senior developer attrition dropped from near-total to a single departure. That kind of recovery requires precisely what your posting describes: sensitive communication in flat structures, agile mindset, and value-maximising judgement under pressure.

At Rohde & Schwarz, I was the sole Product Manager on a European defence AI platform (FCAS), responsible for end-to-end delivery of complex data transformation features across a cross-functional team of architects, data scientists, and engineers. I wrote the user stories, supported implementation, and drove GitOps-based rollout – reducing deployment times from several days to under an hour. That experience sharpened my ability to manage both fachliche Anforderungen and technical feasibility in parallel, which is the core of stakeholder-to-backlog translation.

At the Federal Employment Agency, I owned a public-facing analytics platform for regional labour market data, served as Deputy IT Security Officer, and introduced Dagster for automated

ETL pipelines. The stakeholder landscape there – federal governance, data science teams, regional administrators – required exactly the kind of multi-level communication and reporting discipline your posting calls out.

I am based in Berlin, hold German as my native language and English at C2, and am available within four weeks. I would welcome a conversation about how I can contribute to your client projects.

Best regards, *Philipp Hilbert*
