

Philipp Hilbert. *Technical Product Owner for campus management software.*

Positioning, hands-on product owner with nearly ten years translating complex operational workflows into scalable B2B SaaS – ready to own academyFIVE's technical roadmap.

Dear Simovative team,

Campus management software sits at the operational core of a university – enrollment, scheduling, accreditation, billing, document management, and integrations with third-party systems all converging in one product. That is not a simple domain, and it is not a role for a generalist who reads product books. It is a role for someone who can sit with an architect and a backend engineer in the morning and then explain the same trade-off clearly to a non-technical stakeholder in the afternoon. That has been my working mode for the past five years.

At Rohde & Schwarz, I owned the technical product roadmap for a central AI and data management platform inside the FCAS defence programme. The work required translating multinational, politically sensitive requirements into Epics, arbitrating architecture decisions with a distributed team of data scientists, backend engineers, and QA, and shipping features end-to-end – user stories, acceptance criteria, implementation pairing, testing, and GitOps rollout with ArgoCD. I reduced deployment times from several days to under forty minutes. I also unblocked an infrastructure problem in OpenShift that the project lead had been requesting from engineers for over a year; I delivered it in one week. That is the kind of initiative I bring to a technical PO role.

At Emil Group, I joined an InsurTech SaaS platform that had lost sprint discipline and was haemorrhaging senior developer trust. I split a bloated seventeen-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and delivered a Claims Center module from concept to production within that same engagement. More importantly, I rebuilt client confidence through transparent weekly product workshops – which is the same stakeholder communication muscle that a campus management product demands when working with university IT departments and administrative leads.

At the Federal Employment Agency, I served simultaneously as Product Manager and Deputy IT Security Officer on the Arbeitsmarktmonitor analytics platform, which means I understand the governance, compliance, and data lineage concerns that enterprise software buyers in public institutions care about. That experience directly maps to what academic institutions expect from a vendor's product team.

Simovative has been building academyFIVE since 2002 and is explicitly aiming to become the number-one campus management system in Europe. The roadmap signals in the job description – architecture improvements, interface standardisation, performance optimisation, platform evolution – are exactly the class of technical product work I find most rewarding. I would be glad to discuss how my background fits the team's current priorities.

Best regards, *Philipp Hilbert*
