

Philipp Hilbert. *Enterprise product leader with an AI-native edge.*

Positioning, seasoned Product Manager who turns complex enterprise workflows into shipped software, with hands-on AI tooling across the full delivery cycle.

§ WHY TRINETIX

Trinetix operates across Fintech, Healthcare, Logistics, and Professional Services — exactly the regulated, workflow-heavy domains where I have spent the last decade. The job description calls out Claude Code for rapid prototyping and idea validation specifically, which is a tool I use daily for in-repo spikes and stakeholder showcases, not as a novelty. A global team of over 1,000 professionals coordinating across delivery centres in Europe, the US, and Argentina mirrors the cross-functional, multi-timezone coordination I ran at Rohde & Schwarz and Emil Group. *That is exactly the delivery topology where my coordination instincts compound.*

§ HONEST FRAMING

I do not have direct career experience in Audit or Tax software as dedicated verticals. I have, however, owned data provenance, audit trails, and transparency tooling on a government-grade defence contract, and built compliance-aligned product structures at a public insurer and the Federal Employment Agency — the underlying mechanic of tracing decisions and making opaque processes auditable transfers cleanly.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spikes and rapid prototyping

- **GPT**, discovery synthesis and spec drafting
 - **GitHub Copilot**, implementation support and code review
 - **Lovable**, rapid front-end prototype generation
 - **Framer**, design-heavy stakeholder showcases
 - **Gamma.app**, structured communication and product decks
 - **n8n**, agentic workflow design and automation
 - **Cursor / VSCode**, daily development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin with Spring Boot, Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, OpenShift, Argo Workflows, Jenkins, Bitbucket, Git, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, Docker, CGM API integration, low-code insurance platform, Shopware.

§ SIDE PROJECT

CRYPTO DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal infrastructure for autonomous crypto market analysis and algorithmic trading.

- Builds and runs a backtesting engine for crypto markets against historical on-chain and CEX data.
 - Implements a file-queue-based multi-agent loop using n8n and Replit for orchestrated decision pipelines.
 - Integrates live data from Hyperliquid, Coinglass, and Hyblock Capital for liquidation heatmap analysis and microstructure signals.
 - Demonstrates the same autonomous-tooling and rapid-iteration mindset directly applicable to enterprise product discovery and prototyping at Trinetix.
-

§ HOW I WOULD WORK AT TRINETIX

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow existing enterprise client workflows, read open epics and recent sprint retrospectives, and map where requirements are thin, where stakeholder trust is fragile, and where offshore coordination is creating the most friction.

WEEK 2

Slice and sharpen.

Pick one roadmap item where the acceptance criteria are ambiguous and rewrite it – with user stories, edge cases generated with Claude Code, and a lightweight prototype built in Lovable – to give the engineering team something immediately actionable.

WEEK 3+

Ship and close loops.

Own the delivery of that first feature end-to-end: stand-ups with offshore teams, structured client updates, and a retrospective that captures what the process revealed about the product's next priority.

I COVER LETTER

Dear Trinetix hiring team,

I am applying for the Product Manager role because the combination of enterprise client work, offshore team coordination, and explicit AI tooling expectations matches the way I have been working for the past several years – not as an aspiration but as a current practice.

At Emil Group, I joined an InsurTech SaaS platform where delivery had stalled, client trust had eroded, and a 17-person team was operating without clear ownership. Within weeks I restructured the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt client confidence through weekly product workshops. The Claims Center module went from concept to production rollout during my tenure. That kind of stabilisation work – diagnosing where the delivery system is broken, not just where the backlog is incomplete – is something I find genuinely engaging.

At Rohde & Schwarz I was embedded in a European defence programme, building a central AI data management platform for multimodal datasets. The environment was technically complex, the stakeholders were multinational, and the requirements were never fully stable. I delivered autonomous feature sets end-to-end – from user stories through implementation support to GitOps rollout – and reduced deployment times from several days to under forty minutes by introducing ArgoCD. I also unblocked an infrastructure issue in OpenShift that had been

stalling the team for over a year, resolving it independently in a single week. The audit trail and data provenance work I owned there maps directly onto the compliance and traceability concerns I see in Audit and Tax domain software.

The AI tooling expectation in your posting is specific – Claude Code for prototyping and validation – and I want to be direct: I use it daily. For in-repo spikes, for edge-case generation against acceptance criteria, and for building rapid showcases that let non-technical stakeholders react to something concrete rather than a slide. Combined with Lovable for front-end prototypes and n8n for workflow automation, I can compress the discovery-to-feedback loop significantly, which matters when enterprise clients are paying for results, not process.

On offshore coordination: I have managed cross-functional delivery across distributed teams including engineers, data scientists, architects, QA, and compliance stakeholders in different timezones. The discipline I bring is structured asynchronous communication, clear acceptance criteria, and a bias toward shipping something reviewable rather than debating abstractions in meetings.

I would welcome the opportunity to discuss how I could contribute to Trinetix's enterprise delivery work. I am available for a conversation at short notice.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with close to ten years of experience translating complex enterprise workflows into shipped software. Background spans AI data platforms, regulated public-sector analytics, InsurTech SaaS, healthcare, and security products. Comfortable operating in ambiguous, high-pressure delivery environments where requirements are incomplete and teams need clarity to move. Fluent in AI-native execution including Claude Code, GitHub Copilot, LLM-assisted prototyping, and autonomous feature delivery. Experienced in cross-functional stakeholder management across engineering, design, data science, compliance, and enterprise clients.

§ CORE STRENGTHS

- Translating operational complexity into dev-ready requirements
- AI-native product execution and rapid prototyping for client showcases

- Enterprise stakeholder management and trust rebuilding
- Offshore and cross-functional team coordination
- Product roadmapping and strategic prioritisation
- Backlog ownership, sprint discipline, and velocity recovery
- Data provenance, audit trails, and compliance-aligned product design
- Budget awareness and resource planning in delivery contexts
- Founder-level pragmatism: low ego, high agency, bias toward shipping

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Owned data provenance, audit trails, and transparency tooling for multimodal AI datasets on a government-grade defence contract
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked an OpenShift infrastructure issue independently in one week – a feature the project lead had been requesting from engineers for over a year
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders
- Enabled SafeAI and ExplainableAI evaluation concepts for ML training on curated, reproducible datasets

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered labour shortage analytics, flexible regional comparison tools, and modernised admin tooling for the Arbeitsmarktmonitor platform
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual processes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time
- Designed interactive dashboards and community features for regional labour market stakeholders

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Restructured a bloated 17-person team into smaller Scrum units with clear ownership, recovering delivery stability
- Designed and delivered a Claims Center module from concept to production rollout
- Regained enterprise client trust through structured communication and weekly product workshops
- Reintroduced velocity tracking and refinement practices; reduced senior developer attrition from near-total to a single departure
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage for a mobile-first hospital pilot
- Integrated CGM interface into hospital information system workflows, managing legacy API constraints transparently with stakeholders
- Led a small team under tight deadlines with strict focus on highest-leverage features

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for backup, restore, checkpoint, and data encryption on a quantum-secure one-time-pad product
- USP: setup under two minutes with no technical knowledge required; served as deputy IT security officer
- Delivered English-language sales and product communication to international audiences

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and a mobile app prototype
- Later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies for an enterprise health insurer
